To Keep Their Attention from Drifting, Buy a Touchscreen That Doesn't.

If you're selling multimedia point-of-sale, kiosk, or training systems, steer clear of touchscreens that drift out of calibration and need frequent field service.

The costs can sink you. So can the bad impression you'll make when users touch a screen button and get no response—or the wrong one.

Play it safe. With Elo TouchSystems, the dependable touchscreen leader.

Our advanced IntelliTouch® touchscreens provide the stable calibration you need to keep from looking all wet to your customers. Besides being reliable, they're clear, rugged, and fast-reacting.

We also have "plug-and-play" TouchMonitors that are UL-listed, CSA-certified, and FCC-approved. Easy-to-use mouse emulation software for running applications in Windows, OS/2, MS-DOS, or Macintosh® environments. And fast service. With our most popular products, if we receive your order by 3 p.m., it typically can ship the same day.

Don't get swept away by other companies' promises. When it comes to dependable products and a dependable supplier, there's really only one question that applies. Isn't it time you got in touch with Elo?

Elo TouchSystems, Inc.
(formerly Elographics, Inc.)
105 Randolph Road, Oak Ridge, TN 37830
800-ELO-TOUCH (800-356-8682)

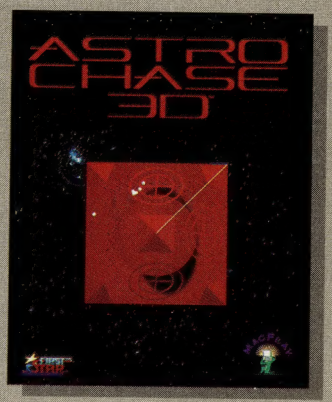
WE'VE TAKEN IT TO THE MACS.

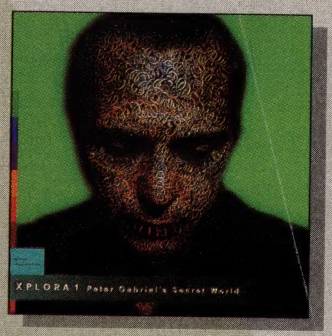
Think about all of the reasons you own a Mac. That's the way we think.

And that's the reason we developed the MacPlay™ line of computer games—to take full advantage of all the graphic and sound capabilities the Macintosh is famous for. It's why we at MacPlay never just port titles from other formats, but instead push to make maximum use of the Macintosh system and all of its unique features. It's why we're always at the forefront of Macintosh technology, rushing to take advantage of Apple's hardware innovations as they're developed.

Some of the computer industry's top artists, programmers and musicians have established MacPlay as a leading producer of award-winning games and educational software. And MacPlay will keep breaking new ground, as long as Mac users continue to push us to the Macs.



ASTRO CHASE 3D™
Slam your Ultraship into a 3D galaxy at unparalelled speeds. Over 35 levels of combat propelled by 3D graphics and new technology create an arcade adventure of unequalled intensity!



PETER GABRIEL: XPLORA 1™
Peter Gabriel is your guide through this interactive journey with no boundaries, where you become part of the man, the music and the performance.

CASTLES: SIEGE & CONQUEST™
King Charles of Bretagne is dead. Now's your chance to seize the throne. You must build an empire and fight your enemies to become the master of all you survey.

MACPLAY™

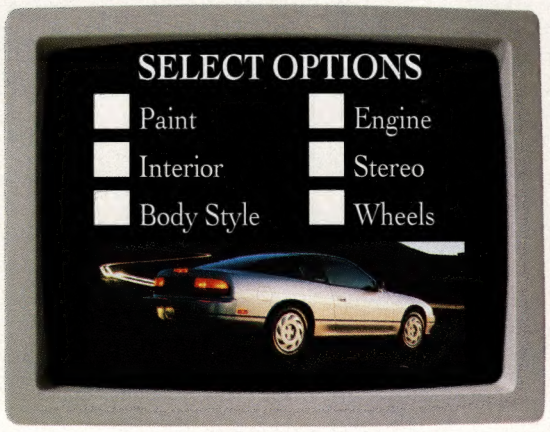
LaserDisc. All the better to build with.

Been there.

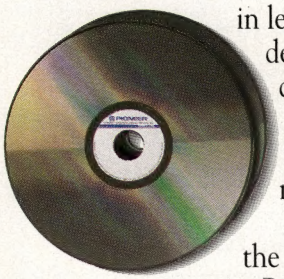


LaserDisc. All the better to sell with.

Done that.

From making it to moving it, Pioneer interactive LaserDisc™ is a real player.

Whether it's moving product from concept to manufacture, or from showroom to customer, Pioneer interactive LaserDisc makes an impact.



On the factory floor, interactive LaserDisc training dramatically outperforms traditional methods in learning time, retention, and cost.* And on the showroom floor, interactive LaserDisc demonstrates, educates, and persuades with an impact and consistency that you just can't depend on from retail sales people.

Choosing the right LaserDisc player is critical to achieving these gains. For example, blank pauses on the screen of more than a second can compromise the effectiveness of both training material and in-store presentations.

Fortunately, Pioneer offers a line of LaserDisc players with the performance, the features, and the reliability to satisfy the most demanding interactive applications. Pioneer gives you end-to-end search times of one-half second or less. Video memory to eliminate blank pauses entirely. Serial connection to computers. And compatibility with authoring software. Plus the experience that comes from being the leading supplier of videodisc players for industry and education.

In addition to superb video and audio quality and long play life, Pioneer interactive LaserDisc players give you the flexibility to incorporate LD-ROM, LaserBarcode™, four audio channels, frame-accurate CLV, as well as numerous performance and convenience features.

Call Pioneer at 1-800-LASER ON and ask how LaserDisc can impact your application. Chances are, we've already been there. And done that.

PIONEER

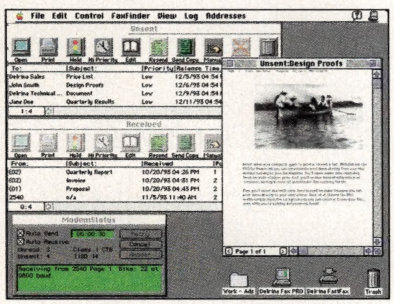
IMA SPONSOR

© 1994, Pioneer New Media Technologies, Inc. 2265 E. 220th St., Long Beach, CA 90810. Pioneer is a registered trademark, LaserDisc and LaserBarcode are trademarks of Pioneer Electronic Corporation.

* Studies show interactive video systems cut learning time in half, increase retention by 80 percent, and save 30 to 40 percent on cost.

For Faxing with your Mac, Nothing is easier than Delrina Fax PRO for Macintosh

Delrina Fax PRO for Macintosh™ lets you send the sharpest, best-defined images of any Mac fax software, regardless of monitor resolution. Now, sending high-quality 16-shade gray-scale faxes from within any of your favorite Mac applications is as easy as printing a document. You can easily combine documents from multiple applications into a single outgoing fax to individuals or groups. And best of all, faxing occurs completely in the background so you can continue working uninterrupted.



Sending a fax from your Mac is as easy as printing a document. Delrina Fax PRO for Macintosh gives you all the powerful fax features you'll ever need including document management and OCR capabilities.

Delrina Fax makes managing, tracking and finding faxes a cinch. Easily sort faxes by eight different criteria. Even convert faxes for editing in your word processor using OCR technology. Plus, Delrina Fax supports all fax modems, even the PowerBook Express Modem™ and the AV GeoPort Telecom Adapter™.

It saves you time, it's easy to install and use, and it gives you spectacular image quality. **So call today, fax with your Mac tomorrow.**

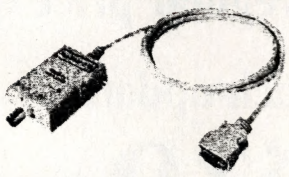
A Cost-Effective Solution for Mac Networking

- Convert your MAC from AAUI connector to 10Base-T or 10Base-2
- Uses standard coaxial (BNC) cables
- Easy to install
- LED signals



UNICOM's newest series of Apple AUI (AAUI) Mac Transceivers allows you to access 10Base-T or 10Base-2 Ethernet Network. Both MacTrans are easy to install and have LED signals to provide visual feedback for network management. With MacTrans-2/T there is no need to use expensive proprietary Apple coaxial cables. You can simply use a standard coaxial (BNC) cable. This modular access to Ethernet offers you high-performance networking with advantages in both ease-of-use and affordability.

For more information on networking products and an UNICOM Distributor near you,

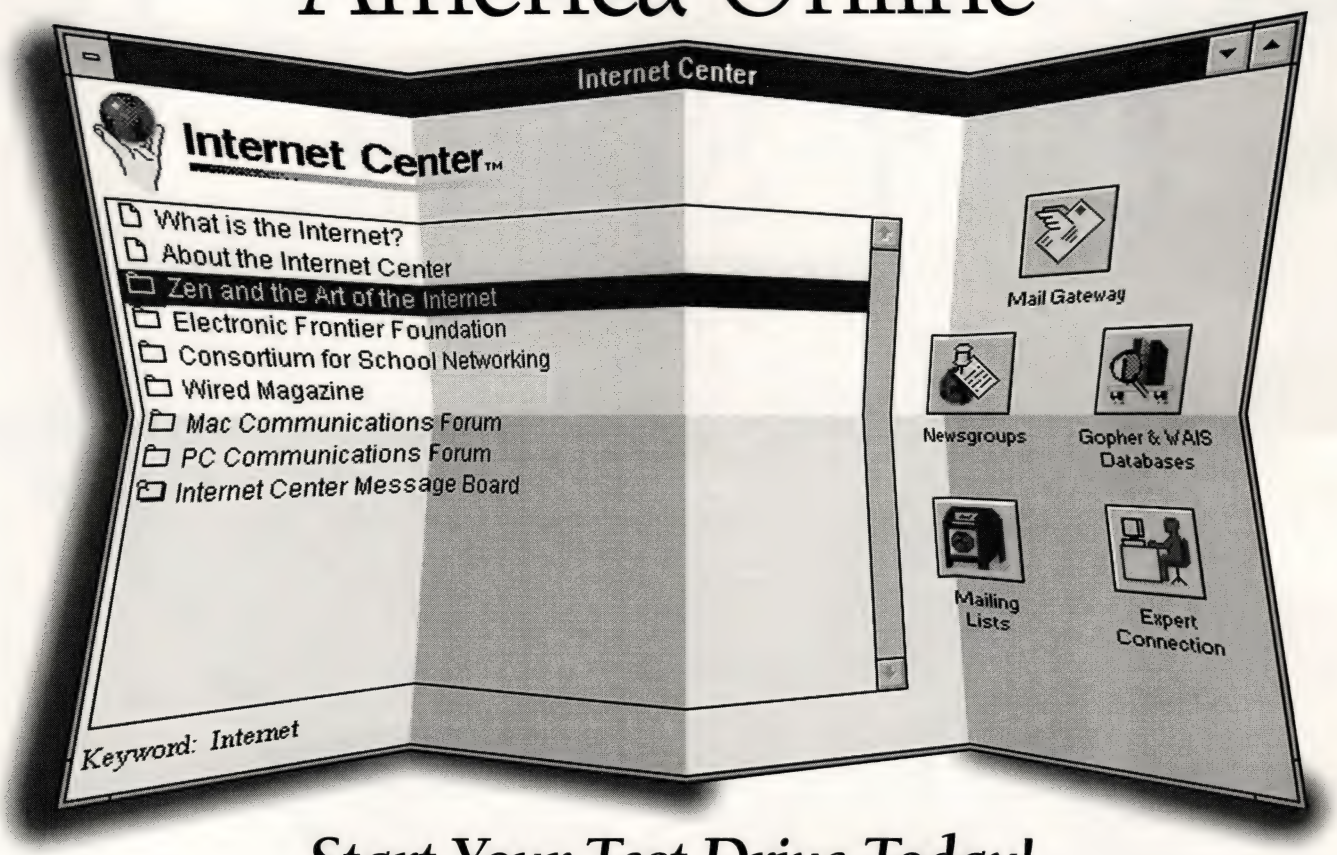
Your Road Map For The Information Superhighway—America Online®



Start Your Test Drive Today!

Before you can exchange ideas with people around the world, you have to learn your way around the information superhighway. No problem. Just go to our Internet Center—your road map to the Internet. You'll find we've made it as easy to handle as America Online. With a point and click, you can access newsgroups on hundreds of topics, send e-mail to other online services or overseas, access information on everything from home brewing to NASA news using Gopher and WAIS databases—and more. Plus, check out America Online's software libraries with over 100,000 files to download. Multi-file downloading and 9600-baud modem access make it fast and easy. You can join online clubs for your favorite hobbies. You can even talk with other members in live conversations, conferences, and classes. All on the most "clickable" online service there is. So hit the information superhighway and head for America Online. It's easy. Simply call 1-800-827-6364, Ext. 3935, to order today!

Try America Online For Ten Hours FREE!

...read on

Dr Mac is 8 years old.
In computer terms.
That's about 42 human years.

The Doc is in his prime.

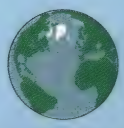
He's been doing the same thing for 42 years, but he keeps up with the technology, knows the latest versions, the current CPU's, the trends. He knows what's best, latest, fastest.

He's got principles:
Great Prices
Competent Service
Fast Delivery

There's lot to be said for confidence based on experience, service founded on competence and distinguished bedside manner.

The Doc is good!

And no appointment is necessary, nor is a Sultan of Brunei budget.



CORPORATE

From "Rudolph's Li'll Corner Press" to "General Electric." We offer a solution for all. No exception. Always. Carefully tailored to solve even the most daunting solutions to fit the most stringent and frugal budget.

We feature:

- ***Product Search***
- ***System Design***
- ***Network Specification***
- ***Site Licensing***
- ***Technical Support Contracts***
- ***Automatic Upgrades***
- ***Software Subscription Plans***

It works. Just ask around.

Or, even better, contact:

Frank Ford at Dr Mac

He's got what it takes!

EDUCATIONAL

From "Ma Sunshine's Preschool" to the "Ivy League." Kids, Sophomores, Educators, Administrators. Our commitment to provide the best possible service to the education sector is self evident.

Dr Mac stocks one of the largest selection of educational software in the nation.

We offer:

- ***Academic Versions***
- ***Software Recommendation***
- ***Product Seek'n'Find***
- ***Educational Contracts***

Want to know more?

Contact:

Heidi Langer at Dr Mac

she knows ...(and if she does not, she will find out for you, PDQ)

GOVERNMENT

Budget cuts? No matter. Dr Mac offers the lowest possible prices to all government departments. Local, State, Federal. Defense, Agriculture, Transport...you name it.

We routinely handle:

- ***Supply Bids***
- ***Product Research***
- ***Site Licensing***
- ***Upgrades***

You are a Purchasing Agent. You spend hours locating, say, "Inverse Logarithm Interpolation 4D-Wave" program. Takes time. Valuable time. Your time.

The alternative is easy, contact:

George Lincoln at Dr Mac

He'll take care of you...and your problems.

INTERNATIONAL

The world is small. Constantly shrinking. We ship (fly, actually) daily to over 50 countries. From Eskilstuna, Sweden to Pago-Pago, Samoa. And becuase we've done it for the last 8 years, we have it down to a tee.

We proudly offer:

- ***Overnight Response***
- ***Great Shipping Rates***
- ***Product Research***
- ***Dealer Partner Program***
- ***50-page Catalog...for free***
- ***T.L.C.***

Not sure about T.L.C.?

Contact:

Hans Petersson at Dr Mac

He will tell you all about T.L.C. In fact, he'll give you a demo.

POWERBOOKS UNPLUGGED™.

VST Power Systems offers award-winning products to help keep your PowerBook Unplugged™. With today's active lifestyles, there is a greater need to work on the go. Thanks to VST, you'll quit working long before your PowerBook®.

SMARTCHARGER™ 500

- Charges and reconditions up to two PowerBook 500 series batteries safely and quickly.
- Implements all required Apple EMM protocols for SmartCharging.
- Available alone or bundled with an Apple AC adapter.

PBTOOLS™ 2.0

- Includes Apple's new Control Strip and modules.
- Compatible with all PowerBook models.
- Provides accurate readings about your PowerBook's battery power level and consumption.
- Increased runtimes with user definable power conservation settings.

THINPACK™ SERIES

- High-density maintenance-free batteries for PowerBook models 100 through 180c.
- UL Listed for safety.
- Increased runtimes.
- 5 to 9 continuous hours of use for ThinPack Complete (3 to 4 hours for color models)
- 8 to 15 continuous hours of use for ThinPack PLUS (4 to 7 hours for colors models)
- Bundled with ThinPack Utilities battery management software.

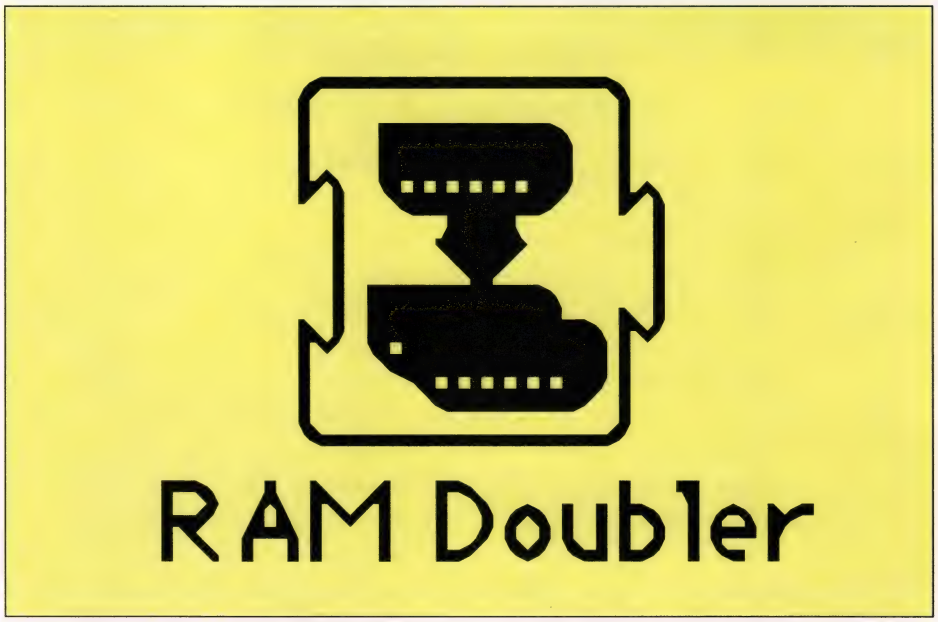
RAM Doubler: Expanding Your RAM The Software Way

by Tony Reveaux



Is your work interrupted by that killjoy dialog box that solemnly intones, "Not Enough Memory"? A $99 software system extension called RAM Doubler from Connectix will double your "effective" RAM. If this sounds like another house call from the Tooth Fairy, just remember when compression algorithms like Aladdin Systems' StuffIt first came on the scene. It felt like getting San Francisco real estate at Little Rock prices. Now, compressed files are common for software distribution and online transfers.

Like compressors, RAM Doubler's code identifies, moves and redistributes digits in different ways. It raids the free memory that is being held in reserve by open applications. The Macintosh system architecture, a pioneer in providing a flexible graphical user interface (GUI) that could work within a low-power desktop environment, was meant to be RAM-generous to programs. RAM Doubler exploits the MMU (Memory Management Unit) to poach all those available units of memory, leveraging off of the CPU so that all those hungry applications "think" that memory is still there.

When the programs try to access that reserve, and don't find it, they then have to go to RAM Doubler and "ask it" to map something else in its place. When that RAM memory runs out, RAM Doubler reaches over to your hard disk, where it compresses and decompresses bits as they are needed. Think of it all as a more socialist approach to memory management and the egalitarian redistribution of RAM.

$99 retail
Macintosh II with PMMU or 68030/68040-based Macintosh, including Power Macintosh; 4 MB of RAM; System 6.0.7 or later.
Connectix Corp.
2600 Campus Dr.
San Mateo, CA 94403
415-571-5100, 800-950-5880 or 415-571-5195 (fax)

You can see the difference displayed in the About This Macintosh window that unrolls when you click on the Apple icon on the left of the menu bar. Before, it just listed the computer's Built-in Memory, with the icons of each application open at the time. The graphic bars reveal how much memory is allocated and the free memory set aside for each. With RAM Doubler installed, a second listing appears, adding the Total Memory. If you had 4 MB in your computer before, your new total will be more than 8 MB. And if you had 8 MB, it will now have a grand total of 16 MB.

The ground floor for RAM Doubler is a Macintosh with a 68030 or 68040 microprocessor, System 6.0.7 or later and at least 4 MB of RAM. I have never experienced a single system crash with RAM Doubler, even after hacking into it with ResEdit. I have had reports from readers, one with a Quadra 700 and another with a IIsi, who encountered conflicts, but they are the exception. I continue to enjoy the productive freedom of having many applications open at the same time, and to cut and paste between them. But developing a large, complex image processing document can still bring the system to its knees. You cannot always expect the same consistent performance from RAM Doubler as with an equal amount of built-in, hardware-based RAM. Nonetheless, for desktop publishing, multimedia and projects where you must coordinate information from many different sources, this effective RAM allows you to display them simultaneously without having to quit and open all the time.

Bring A Manatee Home For The Holidays.

© D.R. & T.L. Schichte

Are you looking for a thoughtful and unique gift this holiday season? Adopt a manatee for someone you love and help ensure the survival of this endangered species. "Parents" will receive an adoption certificate, a photo and biography of their manatee, and the Save the Manatee® Club Newsletter. Your contribution will go toward public awareness, education, research and lobbying efforts to protect manatees and their habitat.

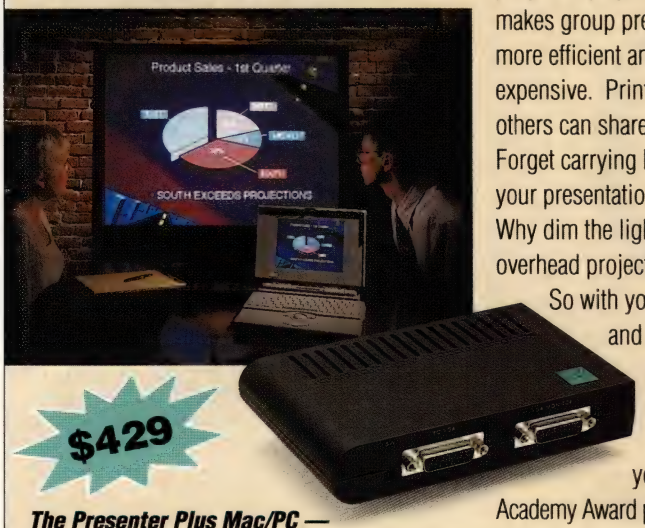
Connect Your Macintosh to any TV...

The Compact Macintosh Presentation Solution



$429

The Presenter Plus Mac/PC — When your presentations count!

800/356-3931

The Presenter Plus Mac/PC turns your Macintosh into an incredible presentation machine. Easy plug-and-play external hook-up makes group presentations much more efficient and certainly less expensive. Print to video tape so others can share your presentation. Forget carrying heavy equipment to your presentation, that's history. Why dim the lights? That's for overhead projectors, also history. So with your PowerBook and The Presenter Plus in your briefcase use the TV available and you're ready for that Academy Award performance.

Works with all Macintosh computers that have monitor output except the IIci and IIsi. The PowerBook Duo series requires a docking station. Also DOS, Windows and OS/2 compatible.

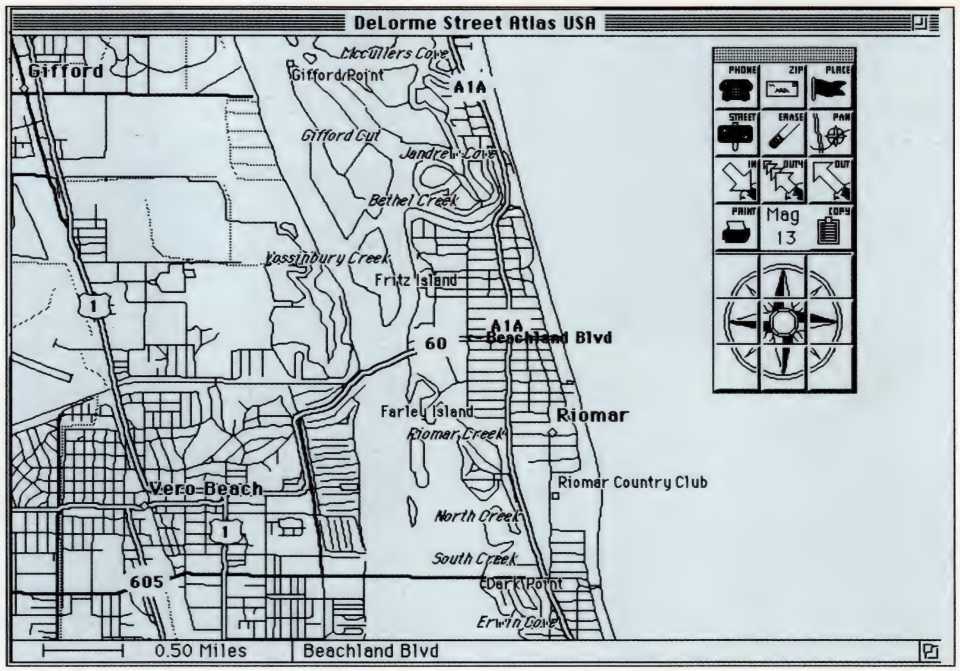
Street Atlas USA: Nation On A Disc

by Tony Reveaux



One CD-ROM that could easily qualify as a "must have" item for every information worker's toolkit is the $169 Street Atlas USA 2.0 for both Macintosh and Windows from DeLorme Mapping. The Macintosh edition coincides with the update of the original Windows version. Incredible as it may seem, on this one silvery wafer rests the data for more than 12 million street segments and more than 1 million lakes, ponds, rivers, parks, railroads and monuments in the continental U.S., including Alaska and Hawaii. "If a user printed out all of Street Atlas USA at the highest level of magnification," according to the publisher, "the finished map would cover more than 10 football fields."

The only lake I couldn't find was Lake Woebegone. But I was able to quickly range and zoom in on the short street of my family's home in a tiny coastal hamlet in Connecticut, and even the Thimble Islands were properly denotated. I discovered one element in my San Francisco neighborhood that was misnamed. "The data is simply too vast for there to be no mistakes ever," says David Purcell of DeLorme Mapping. "We encourage users to make a printout, mark the corrections and send it to us. We are always updating."

The color map database can be viewed in 16 different levels of magnification, from the North American continent down to a closeup that reveals street names. Urban tints show population centers. From magnification levels 9 through 16, elevation lines are displayed in areas of dramatic elevation change. A compass rose tool allows you to move the view in screen-size increments in eight directions.

This can be awkward at times when you want to focus on a location that is near the edge of the screen. It lacks scrolling bars, but includes another feature, which is just about as good. Click the cursor on the spot on the map that you want to be the new center, and it will shift the field to match that point. Another quick way to grab some turf is to use the view box. Simply create a selection rectangle around your chosen land and it will fill the screen.

Street Atlas' search functions make it an absolute whiz for speed and ease of use. You can search by place name, or even a partial, and it will bring that location up front and center. Find by street and it marks that street on the map in gray. There is also a block mode to help narrow down your search. Don't expect the street number accuracy of a Thomas Bros. map; the database is big, but not that big.

For both name and street functions, it will first bring up a selection window, as there is often more than one town or street that share the same name. If, for instance, there is no street by that name within the window area, it will remain unresponsive. Searching by phone number and Zip code adds to the speed and flexibility of the program. You can even add the exchange number to the area code to reach out closer to that target.

The label tool is a question mark with an arrow. Touch a street and it will print the name on the map. Hold the option key, and the label will include the address range of that street. The erase tool will erase that label. But, alas — a fatal flaw — it erases all the labels. You can't selectively erase elements.

Coupled with graphic programs and a laser printer, Street Atlas can serve as an essential business tool. Even before you leave the office to go to a meeting at an unfamiliar site, you can whip out a customized route map in minutes for everyone in your team. You can fax a map to a client showing her how to get to your office. Now those idiosyncratic party maps can be replaced with clear and accurate directions. See you there.

Tony Reveaux, a San Francisco-based consultant, writes the "MediaScan" column in Film/TapeWorld. He can be reached via Usenet (luna@well.sf.ca.us) or MCIMail (290-3008).

This magazine includes every Macintosh product for which we received a response from our mailing to all Macintosh developers in our extensive database. The products are listed alphabetically by category and within categories, primarily by product name. An exception to the product-name heading occurs whenever a vendor is used as the heading. The directory includes many products that are identified with a box (■). These are products that are either new or listed for the first time in the *Macintosh Product Registry*. The directory also includes bold listings, screen shots and logos. These are paid options.

4th Power Accounting
Integrated accounting
Macintosh Classic or larger.

4th Power Accounting is an integrated accounting package for use in small, medium and large-size businesses. The program includes Accounts Receivable, General Ledger and Accounts Payable. This database accounting package uses the powerful reporting, searching and sorting capabilities found in 4th Dimension. Additional features include customizable financial statements, multiple accounting periods open simultaneously, batch processing of transactions and the capability to group GL accounts into multiple divisions. A forms editor that will allow users to customize the printing of their invoices and statements will also be available.

4th Quarter Accounting
Application development platform
Macintosh with 68020 or larger processor; 8 MB of RAM.

4th Quarter Accounting (4Q) is a finished, ready-to-run, integrated accounting package built on an accounting development platform. It is designed to be modified, extended or integrated into any multiuser office system. 4Q consists of GL, AR, AP, Cash, Payroll, Inventory, Sales, Purchase, Input/Export, Administration and Report Writing areas. It includes a two-level account structure, restricted access accounts, a unique journal structure, an unlimited number of journals, profit centers and departments, real-time account updating before posting and any arrangement of open or closed periods. It has transaction templates, automatic and manual funds allocation, multiple sales tax invoices and POs in stock or service formats. It features unlimited payroll items with user-definable formulas, and inventory is managed in real time on a LIFO, FIFO or average basis with lot tracking. Its interface includes a central control panel, context-sensitive help, hypertext reports for interactive viewing, customized query screens, filtering and preview of imported data, plus many other powerful features. 4Q is programmed in the 4th Dimension database language and supplied as source code with both end-user and developer documentation.

Aatrix CheckPrint Kit
Check printing kit
Macintosh Plus or larger; System 6.0.5 or later.

Aatrix CheckPrint is a universal check printing tool designed to work with any accounting program. CheckPrint can print blank checks or it can import information from Quicken, Managing Your Money, MacMoney, MYOB, Bestbooks, Peachtree Accounting or any other accounting program that exports text files. Users can then use CheckPrint to print checks on their own checks, from personal checkbook checks to complicated business checks. The CheckPrint Kit allows users to print their own checks on plain paper using a laser printer, MICR font (for bank account coding information) and MICR Toner cartridge (containing special magnetic properties), resulting in a 60 to 70 percent savings over preprinted checks. Many check templates are included, or users can create their own check design with artwork, logo, signatures, lines, borders, boxes and other custom check designing tools. The CheckPrint Kit includes MICR font, MICR Toner, software and 500 personal or business checks.

Aatrix Payroll V7.0
Payroll software
Macintosh Plus or larger; hard disk drive.

Aatrix Payroll is an easy-to-use program that walks beginners through installation and employee setup. Employee paychecks are calculated and processed in as little as two seconds. Check printout can be customized to match any check form, including laser checks. All Federal and State tax tables are included. Employer paid contributions, such as unemployment, disability, social security and Medicare, can be calculated and accumulated. Eleven customizable deductions and employer contributions can be used for salary or hourly pay employees. A report builder allows printing of 941s and W2s or will generate any report information that users require. Aatrix Payroll automatically creates link files for Hi!Finance, CheckWriter 4/0, Quicken, MYOB, Bestbooks, MacMoney and other accounting programs.

Ad Specialties Controller
Integrated accounting package for advertising specialty sales companies
Macintosh Classic or larger; 8 MB of RAM; hard disk drive.

Ad Specialties Controller is a fully integrated, multiuser accounting package for companies selling advertising specialty products. It includes Sales Lead Tracking, Order Entry, Accounts Receivable, Purchasing, Accounts Payable, Check Writing, Inventory Control and General Ledger. The system includes more than 150 different management reports. Order Entry functions recommend quantities to ship, backorder quantities and pricing. On-screen supervision provides product and customer information to aid sales reps in taking orders. Graphic software is also available to allow preparation of logos and other graphics used in the imprint. Inventory Control provides multiple price categories and identifies Economic Order Quantities, recommended minimum, maximum and safety stock levels, average daily use and ABC values. Purchase Orders are automatically generated to the prime vendor for each sales order within any given date range. Vendor invoices are generated from the PO to facilitate comparison of PO terms with the actual terms of the vendor's invoice. Separate sales commission rates can be entered for closing orders, being account manager and department manager. Commissions can be based on sales or gross profit.

AutoClock
Time, attendance and payroll software
Macintosh Plus or larger; 2 MB of RAM; hard disk drive.

AutoClock is a system that starts at the time card and ends with a paycheck. AutoClock replaces the time clock with a sophisticated time, attendance and payroll package. Unlike manual time clocks, AutoClock automatically stores and rounds each punch, calculates elapsed times and prepares each time card. On payday, AutoClock calculates payroll figures, prints payroll summaries and prints pay checks. AutoClock even tracks and calculates Vacation, Holiday, Sick and PTO hours. AutoClock retains complete payroll histories and prints Quarterly Reports, W-2s and a variety of other reports. AutoClock is provided for use on two computers. One is normally dedicated as an AutoClock and replaces the old time clock. The other is for the administrator to manage the system from their regular desktop computer. Additional AutoClock or Administrator licenses can be purchased to create larger networks of AutoClocks.

AutoClock+ is a complete solution that combines AutoClock software with AutoCard ID badges and a MagScan Magnetic stripe/badge reader. AutoCards are employee ID badges with unique passwords encoded on a magnetic stripe. Each card is made of durable polyester that resists abrasion, distortion, warping and mechanical abuse. MagScan is an integrated magnetic stripe reading/decoding system that is super compact and plugs directly into the Apple Desktop Bus. No power supply or keyboard wedge is required. AutoClock+ provides all the software and hardware to automate a complete payroll system.

Bestbooks By Teleware
Entry-level bookkeeping for home and small businesses
Macintosh Plus or larger; 1 MB of RAM; hard disk drive.

Bestbooks by Teleware is complete bookkeeping for the small, growing business. It brings a financial solution to the home and small business that does require many of the more powerful or sophisticated functions found in traditional accounting programs. Bestbooks by Teleware is complete with checkbook, item or service invoicing, payables, receivables and administration sections critical to running a business. Menu items are laid out in an easy-to-follow flowchart format, making the program extremely easy to use. More than 70 reports are available, as well as a powerful custom forms designer.

Business Operations Software System (BOSS)
Business management system
Macintosh with 8 MB of RAM.

BOSS is a complete business management system offering integrated accounting, ideal for companies with complex inventory control and pricing needs and quick order entry with flow-through to purchase orders. It's been configured for distributors, wholesalers and importers/exporters. It includes a Prospects module for lead tracking, a Salesforce module, end-user registration tracking, customer product purchase history, daily sales tracking, geographic marketing analysis and complete office management. Features include multiple shipping addresses, multiple warehouses, individual/batch processing, invoice detail and serial number entry, handing of services, as well as goods, weights/measures entry, unique quick line item entry, drop shipping, just-in-time order processing, "quote" and "hold" orders and automatic backorder handling. Inventory control includes unlimited "lots," price levels and vendors per item, real-time updating of lots across warehouses, assembly/package production, generation of purchase orders based on alert quantities, drop ship commitments or just-in-time fulfillment. It tracks contracts for import/export.

■ Cash
Small business book keeping
Macintosh Plus or larger; 4 MB of RAM; System 7.0 or later.

Cash is a practical way to manage cash and pay bills for small businesses, professionals and self-employed. Cash is a full-featured financial program that provides the vital element missing from many programs: cash flow management. With Cash, users will truly understand their company's total financial situation. Cash handles all of the essential book keeping functions most businesses require. It manages checkbooks, prints checks, tracks expenses and prints reports that can be given to an accountant for taxes. Cash does more than just help users manage their finances. It solves the problem of unpredictable cash flow. Rather than reporting on the past, Cash looks ahead to the future. The uniquely powerful feature of Cash is its ability to forecast future trends and guide users to make the right decisions today.

Cash Ledger
Accounting
Macintosh Plus or larger; 1 MB of RAM.

Cash Ledger is a full-featured accounting package for those businesses that use cash-based reporting. Full export (including transactions) is included. A full year of transaction history is maintained. Transactions can easily be modified until the month is closed, and adjustments can be made to any month in the current year. Notes can be added to transactions. Cash Ledger also provides bank reconciliation. Account balances can be graphed or exported in SYLK file format. Cash Ledger provides extensive financial reports, including Chart of Accounts, Trial Balance, Balance Sheet, Income Statement, Transaction Journals, General Ledger Listing, prior-year comparisons, year-to-date, budget vs. actual comparisons and more. Other reports include current year vendor payments and information, mailing labels and more. Cash Ledger can be customized for a variety of check formats and printers. Payroll checks (including employer tax liabilities) created with CheckMark's Payroll program can be posted directly into Cash Ledger. Cash Ledger files can be upgraded for use with CheckMark's MultiLedger accounting program if accrual accounting is later required.

Computerized Classic Accounting
Accounting for Excel users
Macintosh Plus or larger; 4 MB of RAM; 20 MB hard disk drive; ImageWriter or LaserWriter.

Computerized Classic Accounting (CCA) is a complete accounting/spreadsheet program that translates the exact form and organization of manual accounting to the computer. The Business Package includes General Ledger, Accounts Payable, Accounts Receivable and Inventory Control. All A/R and A/P documents, including invoices and statements, can be completely customized (e.g., users can add new text, change formats, insert logos or link additional information from the customer, inventory and vendor rosters). The General Ledger program, available independently, includes several types of journals and five predefined charts of accounts that can be customized to meet the needs of individual users. CCA generates a complete range of financial reports, including Income and Expense Statements, Trial Balance and Balance Sheet. In the Enhanced Version of CCA, all financial reports can be customized. The Enhanced package also features an unlimited variety of graphs, as well as non-standard journals (user-defined spreadsheets that can be posted directly to the General Ledger) and direct access to Excel while working in CCA. Users can open all CCA documents in Excel to customize formats, analyze data, create forecasts and prepare graphs.

Computerized Classic Accounting Job Cost Program
Job costing for CCA users
Macintosh Plus or larger; 2 MB of RAM; 20 MB hard disk drive; ImageWriter or LaserWriter.

The Job Costing module for Computerized Classic Accounting is designed for fund accounting, as well as the contract and/or service-oriented business. The program handles allocations at three levels of distribution: up to 999 jobs; up to 999 groups within each job; and up to 999 items within each group. The set-up names and formats of these categories are entirely defined by a user. Jobs can be created by copying previous jobs for easy startup. Income and expenditures can be exported directly from the CCA Cash Disbursements, Cash Receipts or Payroll Journals for allocation in Job Costing. The Job Cost program includes easy budgeting; the program automatically displays the budget amount, the amount expended and the balance remaining for each job group in a useful spreadsheet format. Transactions can be reported in total or for specified jobs. In addition, the program provides for comparison analysis of different jobs. Formatted reports can also be exported to Excel, where they can be customized or used to produce graphs.

Data Tranzlator For Quicken
Takes any text file and changes it into the Quicken QIF format
Macintosh Plus or larger; hard disk drive; System 6.0.5 or later; HyperCard 2.1 or Player.

Data Tranzlator can take any text file and change it into the Quicken QIF format, allowing users to export and import from their FileMaker Pro database into Quicken effortlessly. This powerful utility eliminates the "double entry" nightmare of getting information from a database and into an accounting program. It automatically performs an import of all the Quicken "Split" functions when items are broken down by accounting category. It is very user friendly and is controlled by a series of buttons that allow users to save their "Preferences" from their own import/export setups. It also comes preset for sales systems, such as Biz Basics, allowing users to merely click a couple buttons to take care of necessary import/export of field orders. Call for use with other programs, such as PageMaker, FileMaker Pro and various other accounting programs.

DD Itemizer
Capital asset management
Macintosh Plus or larger; 2 MB of RAM.

Itemizer takes the tasks associated with asset management and makes them easier. It provides laser printer owners with easy-to-use facilities for printing bar-code labels and data entry charts for use during asset labeling and identification. Itemizer's data entry windows are easily modified for each end user's unique requirements. Assets are entered into Itemizer either by importing a file from disk, downloading information from a portable data collection unit or by manually keying in the data. Physical inventories are performed using portable bar-code readers and collected information is then ported to Itemizer for analysis. Itemizer prints physical discrepancy reports that detail missing and unidentified items. Physical inventories can be conducted by room, floor, building or company and can be performed at any time. Itemizer interfaces with all portable data collection units and provides extensive utilities for querying the database, creating user-defined reports and exchanging data with other systems.

Evolve
Analysis tool for all types of accounting software
Macintosh Plus or larger; 2 MB of RAM; 20 MB hard disk drive; ImageWriter or LaserWriter.

Evolve is a high-powered analysis tool, working under Excel. It takes the data from any accounting program and transforms it through a unique graphical interface into its own file system. Once transformed, the data can be used for a wide array of analytical operations. With easy menu commands, users can quickly create customized output of all kinds: flexible financial statements, budgets, charts, comparisons, projections, business ratios and unlimited graphs. Data can be accumulated up to five years. Evolve imports data quickly because it retains the Chart of Accounts from the first download; only new accounts need to be added.

ExpensePlus
Business reporting software
Newton MessageCard; Newton Connection Kit; Macintosh Plus or larger; 1 MB of RAM; System 7.1 or later.

ExpensePlus simplifies the way users capture, organize and report business expenses. It is the fastest way for users to get their money back. Business reporting software engineered specifically for the Newton MessagePad and related technology, ExpensePlus lets users easily track hotel bills, cab fares, meals, tips, air fares and more. It takes advantage of Newton Intelligence, leading-edge technology and recognizable graphic icons. With ExpensePlus, a tap on the Newton records an expense. Or users can simply jot "$16.95 pizza" on the notepad and tap the Assistant icon. An expense slip is automatically created. With ExpensePlus, expense reports can be printed or faxed directly from the Newton. Or users can send expense data to many popular Macintosh and Windows software products for advanced business expense reporting. User-customizable templates are included, providing the flexibility to meet a variety of corporate reporting formats. A host of other ExpensePlus features are designed to make expense reporting effortless.

FlexShare
Accelerates performance of FlexWare's accounting modules over AppleTalk and EtherTalk
Macintosh Plus or larger; 2 MB of RAM (4 MB for System 7); hard disk drive with 47 MB or more of free space.

FlexShare is a high-performance software product that speeds FlexWare database performance over AppleTalk and EtherTalk. Normally, accounting systems access a shared database by each computer reading through the "index" portions of the database to find the record they need. This means that the network becomes jammed with the transmission of indexes, and performance in a large network is poor. With FlexShare, the computer that holds the database does the search locally and returns the requested record. As a result, users receive the information they need much faster, and the load on the network is cut dramatically. Performance is improved by a factor of 30 to 80 in larger networks. FlexShare requires either a dedicated computer, or it can co-exist with AppleShare on the same computer.

FlexWare
Multicompany, multidepartment and modifiable accounting system, with complete audit trails
Macintosh Plus or larger; 2 MB of RAM (4 MB for System 7); hard disk drive with 30 MB or more of free space; multiuser requires AppleTalk or EtherTalk and networking software, such a AppleShare or FlexShare (client server); FlexShare and/or AppleShare require dedicated Macintosh.

FlexWare Accounts Receivable is a system designed to provide users with instant access to sales history and credit status for each of their customers. It decreases the time spent preparing invoices and statements and can improve average collection time. Payments can be quickly entered and applied.

FlexWare Accounts Payable is designed to maintain vendor information and to receive vendor invoices, calculate invoice due dates and discounts, distribute invoices to appropriate General Ledger accounts, write checks at the optimum time and provide management reports, including cash forecasting reports.

FlexWare General Ledger is designed to record a company's financial transactions, receive information from other accounting applications and maintain records for management reports and financial statements.

FlexWare Inventory is designed for managers to balance inventory levels between adequate stock to meet sales or usage requirements without excess investment in inventory.

FlexWare Order Processing enters, records, processes and reports sales orders entered at the moment an order is taken. It will automatically post customer accounts in the FlexWare Accounts Receivable module and update product records in the FlexWare Inventory module.

FlexWare Purchasing is designed to help reduce costs of purchasing, insure adequate inventory levels and minimize inventory investment.

FlexWare Point of Sale is a fast, simple and straight forward system to record sales in a retail, wholesale or service environment. It is fully integrated to FlexWare's backroom accounting modules. It processes retail sales, provides full sales analysis and keeps inventory up to date.

FlexWare Job Costing is a completely integrated cost accumulation module. Costs accrued through Payroll, Accounts Payable, Accounts Receivable, General Ledger and Inventory are detailed and summarized. FlexWare Job Costing can be used in conjunction with FlexWare AR, Payroll, AP, GL, Inventory or as a stand-alone cost tracking system.

FlexWare Payroll is designed to maintain employee and pay information. It processes salaried or hourly employees with flexible time-card entry using a variety of pay rates to calculate their net pay. The system calculates a variety of voluntary and tax deductions with user-definable tax tables, for state and federal, to arrive at a net pay.

Report Writer is an easy to use graphical interface used to create report specifications processed by Report Writer print program.

General Financials V7.1
Accounts Receivable, Accounts Payable, General Ledger, Order Entry, Invoicing, Inventory Control (other modules are available)
Macintosh Classic or larger; hard disk drive; printer.

General Financials has been designed with the latest technology, is compatible with System 7 and provides a fully integrated, multiuser, direct sales and double-entry accounting system for business use. The system offers multiple window display and operation, along with online help windows to automatically enter information. Sales orders interact with the inventory files, placing products on reserve for shipment from a main or remote warehouse(s). Standard or discount pricing structures are available for sales orders. Purchasing of materials or products will interface with the Inventory and Accounts Payable modules. Accounting can be maintained for profit and cost by multiple division and/or departments, and includes individual and consolidation of income statements. The integrated accounting modules provide industry standard accountability and audit trails. Modules include Order Entry, Invoicing, Inventory Control, Accounts Payable, Accounts Receivable and General Ledger. Additional modules are available.

Macintosh Report Writer
Customizes reports and exports Great Plains Accounting data into other applications
Macintosh Plus or larger.

The Macintosh Report Writer extends the reporting flexibility of Great Plains Accounting with its capabilities to customize reports and export Great Plains data into other Macintosh applications. The Macintosh Report Writer's point and click user interface with pull-down menus and WYSIWYG report design provides the formatting flexibility for customizing and enhancing reports. The Macintosh Report Writer extracts data from Great Plains Accounting, selects and sorts the data and displays it in queries or reports. It offers significant power and flexibility in selecting and sorting the data, performing calculations and viewing and printing or saving the information to disk.

Maconomy Business Solutions
Accounting, sales and distribution, inventory, service and grant management
Macintosh LC III or larger; 5 MB of RAM; 80+ MB hard disk drive for server; 40+ MB hard disk drive for client; System 7.0 or later.

Maconomy is a high-end, customizable, fully integrated, multiuser accounting and business management system based on SQL relational database technology with true Client/Server architecture. Maconomy can expand from single user to more than 100 users with a Macintosh or a Unix engine as the Server. Double entry posting assures that the General Ledger is always in sync with subsidiary systems. Multidimensional cost accounting and date-based open posting allows for ultimate reporting flexibility; there is an unlimited number of open periods. Multiple currency control and VAT features are already built in. Maconomy offers an unlimited number of price lists, each with five-level volume discount setup. Comprehensive line item discount agreements satisfy the most demanding firms within Wholesale Distribution and Light Manufacturing. Maconomy includes the following features: multiple inventory locations; serial number tracking; bill-of-materials; costing methods include average, LIFO and standard; real-time status per item is available; on order; on quote; on back order; and on PO (not yet received). Job cost system tracks the cost allocation for time and material and manages billing for jobs and phases. Maconomy provides a real-time picture of job performance against budget per job and phase. Maconomy deliverables include General Ledger; Basic; Trade; Job Cost; Bill-Of-Materials; Encumbrance; Multiple Companies; LayoutDesigner; and ReportDesigner for the ultimate in customization.

MacP&L
Small business accounting package
Macintosh Plus or larger; 1 MB of available RAM; hard disk drive; System 6.0.4 or later; printer.

MacP&L is a small business accounting package that integrates General Ledger, Accounts Payable, Accounts Receivable, Inventory, Payroll, Project Tracking and complete financial analysis. Businesses can track an unlimited number of customers, vendors, inventory items and General Ledger accounts. The program creates invoices, checks, purchase orders, statements, credit memos and job quotes. It uses pre-printed forms or will actually generate a form on plain paper. More than 100 reports can be accessed at any time to provide businesses with essential financial information whenever it is needed. Using System 7 technology, MacP&L can share information with other System 7-compatible software, allowing users to customize forms, create custom reports and interchange data with spreadsheets. A multiuser version is also available, which uses an advanced client/server design for superior performance on all AppleTalk networks, from the simplest LocalTalk and PhoneNET to the fastest Ethernet. The base multiuser configuration includes three users, with additional users optional.

MacRegister
Point-of-sale, accounting and inventory control system
Macintosh SE or larger; hard disk drive; ImageWriter II.

MacRegister is a fully integrated, single user or multiuser, point-of-sale, order entry accounting and inventory control system designed for use in wholesale or retail businesses. Point-of-sale functions include customer ledgers, customer comments, Accounts Receivable, finance charges, payments received, gift certificates, order entry, back order tracking and sales invoicing with automatic calculation of customer and/or quantity discount prices, adjustment of inventory quantities and calculation of salesperson commissions. Invoice types include retail, wholesale, rental, consignments and price quotes. Purchase functions include Accounts Payable (with optional check printing), purchase order and purchase receipt entry with automatic adjustment of inventory quantities and costs.

The Inventory is a perpetual inventory control system that provides fields to record the item description, vendor, vendor part number, taxable item indicator, serial numbered item indicator, warranty period, color, size, weight, style, location, suggested sale price, four levels of discount prices, first cost, last cost and moving average cost. The system maintains the current quantity on rent, consignment, back ordered, on order and on hand. The General Ledger is a double-entry, accrual accounting system that is fully integrated with all other portions of MacRegister. More than 80 sales, customer, purchase, vendor, inventory, employee and General Ledger reports are provided.

MacSys Site Management System
Site management system
Server requires Macintosh SE/30 or larger; 8 MB of RAM; 80 MB hard disk drive. Client requires Macintosh Plus or larger.

The MacSys Site Management system is a 4th Dimension-based client/server site management and financial reporting tool that features extreme ease of use. The system is designed for centrally managed organizations whose operations include physically separated sites that communicate over standard telephone lines. The system is intended to operate in tandem with established accounting systems, enhancing their use, producing supplemental reports and providing operating features not available with conventional systems. The system greatly simplifies all central and site accounting procedures. The system consists of seven integrated modules. These are the Fund Maintenance, Purchase Order, Time Sheet, Leave Form, Local Funds, Asset and Setup modules. One key feature of the system is that system-level controls can be defined centrally to help regulate site operations. Data transfer between the remote sites and the central office (server) can be initiated manually or on a predefined schedule. The system has multilingual capabilities. Customization is available as required.

Managing Director
Accounting and business management system
Macintosh LC or larger; 12-inch or larger monitor recommended; System 6.0.5 or later (System 7 required for some features); Helix Express 2.0 or later; full-page monitor recommended; PostScript-compatible printer or ATM.

Managing Director is a comprehensive and secure client-server based multiuser practice management system, developed, published and directly supported by practicing attorneys. It integrates the management of case files, clients and all other associated persons; reminders, schedules and work assignments, including the retrieval of externally stored computer documents; business, trust and tax accounting, including laser checks and self-configuring income statements; time and billing; computer-assisted document drafting; and more. More importantly, it performs these many functions elegantly in an inviting, intuitive and integrated way while fully exploiting the Macintosh interface. Dynamically linked pop-up menus, on-screen command buttons, intelligently computed defaults and very extensive data validation during and after entry ensure accurate, efficient and consistent entries without the need to remember obscure codes or commands and with a minimum of typing. Built-in intelligence constantly watches as users work, alerting them to errors and offering coherent and appropriate explanations if requested.

Marina Mac
Marina accounting program
Macintosh Plus or larger (SE/30 or II recommended); 2 MB of RAM; hard disk drive.

Mac Marina is an invoicing and accounting package for marinas and yacht clubs. It includes files for customers, boats and service charges. The charge for each service is defined as a function of a number of parameters, including hours, length of boat, number of engines, etc. Invoices can also include materials and charges for services not on the standard list. Charges are accumulated by customer and an invoice prepared for all outstanding charges or a selection thereof. Payments are treated as "on account," but assumed to be against the oldest invoice. Statements are available, as well as the capability to charge interest. Cash disbursements can also be recorded, and a General Ledger file of all charges and payables is maintained.
$1,250 retail; customization service available
Macintosh Business Systems, Inc.; 3 Country Ln.; Mamaroneck, NY 10543; 914-698-7215

MultiLedger
General Ledger, Accounts Receivable, Accounts Payable, Inventory tracking
Macintosh Plus or larger; 1 MB of RAM.

MultiLedger is an integrated accounting package that consists of General Ledger, Accounts Receivable, Accounts Payable and Inventory. It also provides service invoicing, profit centers, job costing and commissionable sales. Full import/export (including transactions) with import preview is built in. A full year of transaction history is maintained. Transactions can easily be modified until the month is closed, and adjustments can be made to any month in the current year. Customer and vendor history are available during transaction entry. Customers and vendors can be set up with

Hire a Payroll Expert!
Aatrix PayCheck, Payroll or Ultimate Payroll 1-800-426-0854

credit limits. Notes can be added to transactions. Document descriptions and customer or vendor names are included, along with document numbers and dates in lists for quicker identification. MultiLedger also provides bank reconciliation. Payables and receivables are tracked using the open item method. Account balances can be graphed or exported in SYLK file format. MultiLedger provides extensive financial reports, including Chart of Accounts, Trial Balance, Balance Sheet, Income Statement, Transaction Journals, General Ledger Listing, prior-year comparisons and more. Other reports include accounts payable and receivable (including aged periods), current year payments, vendor and customer information, current year sales, salespeople reports, inventory and service reports, mailing labels and more. MultiLedger can be customized for a variety of check, invoice and statement formats and printers. A 1099 miscellaneous income utility is included. MultiLedger contains a built-in link to Timeslips III. Payroll checks (including employer tax liabilities) created with CheckMark's Payroll program can be posted directly into MultiLedger. The MultiLedger multiuser includes capabilities allowing up to 10 users to simultaneously access company files on a shared volume.

OnAccount 1.1
Professional invoicing
Macintosh SE/30 or larger; 2 MB of RAM; hard disk drive; System 6.0.5 or later.

OnAccount is an invoicing program designed especially for small professional businesses. Unlike traditional accounts receivable packages, OnAccount requires no special knowledge of accounting to be used effectively. OnAccount is designed to be used on-the-fly, writing and posting invoices as soon as jobs are completed. OnAccount helps users fill in invoices by displaying an inventory list of frequently sold items or services. At month end, a single command advances account aging, assesses finance charges, if desired, and prints statements for all customers. OnAccount also creates a variety of sales reports. Version 1.1 allows users to customize the printing template used for invoices and statements, including a company logo. No forms are required. OnAccount will work as a stand-alone invoicing application or linked to White Crow's Office Manager. When linked, OnAccount can import time and expense data from Office Manager's job tracking file. OnAccount is an ideal billing solution for designers, photographers and other professionals.

Payroll
Payroll accounting
Macintosh Plus or larger; 1 MB of RAM.

CheckMark Payroll is a complete payroll system for small to medium-sized businesses. Employees can be set up as hourly, salaried or both, with flexible pay periods and deductions (including user-defined deduction categories based on a variable percentage or fixed calculation). Three hourly pay rates can be entered for each employee. All employee hours are entered in one window. Users can track regular, overtime, double-time, sick and vacation hours on a current and year-to-date basis. Vacation and sick hours can be accrued at a monthly rate with a warning when hours are taken beyond the available amount. Hours and wages can be distributed by departments (or jobs if using CheckMark's MultiLedger program). Three additional income categories can be defined as taxable or non-taxable. Deductions, such as 401(K) or cafeteria plans can be exempt from any combination of federal, state or local taxes. CheckMark Payroll creates payroll checks, employee earnings reports, quarterly tax liability reports and prints directly on W-2s and 941s. CheckMark Payroll also summarizes W-3 information. It can be customized for a variety of check formats and printers. Federal and state tax tables are included and can be modified by a user or updated each year for a modest fee. Payroll can import employee hours and import/export employee and check information. It can be used as a stand-alone payroll system or can post payroll data to either CheckMark's MultiLedger or Cash Ledger programs. CheckMark Payroll can also export employee checks and employer taxes to Teleware's M.Y.O.B. accounting program. A Canadian version of Payroll is available.

PayrollMaster
Accounts payable, payroll, check printing and checking account management
Macintosh Classic or larger; 4 MB of RAM; hard disk drive.

PayrollMaster runs accounts payable, calculates payrolls, prints checks and manages the business checking account. It helps organize business records and provides valuable evaluation features. Besides

Hire a Payroll Expert!
Aatrix PayCheck, Payroll or Ultimate Payroll 1-800-426-0854

figuring payroll, checks can be assigned to general ledger expense accounts, which enables quick expenditure summaries. PayrollMaster prints on checks available from a well known form manufacturing company. PayrollMaster simplifies payroll procedures and saves time. No more paging through withholding tables to determine deduction amounts. An employee's wage status in entered initially and this information is automatically utilized for figuring payrolls with the click of a button. PayrollMaster handles federal and state withholding and determines deductions for IRAs, 401Ks, 403Bs, qualified cafeteria health plans and non-pretax deductions. Various periodic reports can be viewed on screen or printed, including month end, quarterly, 941, W-2, W-3 and checkbook category summary. The program can split a check into as many as four sub-categories and then allows a sub-category to be tracked.

Macintosh SE/30 or larger; 8 MB of RAM; hard disk drive.

Pinehill Accountant is a full, double-entry integrated accounting system (general ledger, accounts payable and accounts receivable) that allows users to manage different companies appropriately. Users can manage any number of three levels of their (and/or someone else's) organization's business entities (e.g., companies, divisions and products); vendors, customers, partners and/or stockholders, bank accounts and loans (mortgage and equipment). Users can mix cash and accrual accounting, closing the books or not, tracking and printing purchase orders (and pay vendors from the purchase order to avoid duplicate data entry) and invoices or not. Users can batch transactions or post them immediately; and they can import transactions, customers and vendors from other applications. Pinehill Accountant allows users to print invoices, statements, checks and deposit slips, as well as reconcile bank accounts, which can be shared among companies. Balance sheets (at the company level) and profit and loss statements (at any level) are automatically produced. Some other reports are: Trial Balance; Cash Disbursements Journal; Cash Receipts Journal; Accounts Payable and Receivable journals; General Journal; and General Ledger Detail Account Balances.
$795 retail; single user
$1,495 retail; with source code access (multiuser capable)
$1,895 retail; multiuser with server, two clients
$199 retail; each additional client

Precision Inventory Control And Order Entry
Inventory control/order entry system for mail-order businesses
Macintosh Plus or larger; hard disk drive; ImageWriter.

The Precision Inventory Control and Order Entry (PICOE) system is an inventory management system for mail order businesses. Inventory control includes functions for receiving new stock items, shipping stock items, updating stock information, reordering points for stock, back ordering stock and tracking year-to-date sales of stock. A retail and a cost-of-goods price is stored for each stock item. PICOE allows fast and efficient order entry processing of phone and/or mail-in customer orders.
$1,995 retail

ProfitAbility Professional
Integrated accounting system
Macintosh Classic or larger; 2.5 MB of RAM (4 MB recommended); System 6.0.5 or later.

ProfitAbility Professional is a fully integrated accounting system with a "hands-on" feel. As easy to use as the Macintosh, the "At A Glance" visual format lends itself to keeping an eye on business performance. ProfitAbility features customizable invoices and estimates, sales report/journal, inventory control, an automated/reconcilable checkbook, extensive financial statements, AR, AP, client/vendor database, a daily planner, printcheck and more. HyperCard 2.1 is included. Optional modules include Payroll, Time & Materials Job Tracking, APA Estimate/Invoice (for professional photographers) and PowerBook Planner.
$149 retail; includes 90 days of toll-free technical support and all upgrades
$40 retail; full working demo with manual (applied towards final purchase)
$29.95 each retail; optional modules
Wetzel & Company, Inc.; 147 E. Rocks Rd.; Norwalk, CT 06851; 203-846-2504 or 800-635-7849 (orders)

ShuBox II
Small business and personal accounting in one package
Macintosh Plus or larger; hard disk drive; printer.

ShuBox is a complete and comprehensive accounting system for a small business. In addition to accounting functions, it includes payroll and a mailing list provision from which records may be searched by up to 38 criteria. ShuBox tracks 10 bank accounts, seven different enterprise zones for a business, as well as schedule A and personal expenditures with payables, receivables, budgeting, debt amortization, banking, payable and receivable invoicing and more.
$40 retail; also shareware availability
A.H. Nussel Sr.; 260 NE 6th Blvd.; Williston, FL 32696

Small Business Accounting System
Designed for users who are running cash- or accrual-based businesses primarily out of one or more checking accounts
Macintosh Plus or larger; 1 MB of RAM; Microsoft Excel.

The Small Business Accounting System is designed for users who are running cash- or accrual-based businesses primarily out of one or more checking accounts. As a user makes accounting entries, the balance sheet or income statements are always kept up-to-date and in balance. A macro posts the entries. Sample entries and instructions walk a user through the various uses of this program.
$99 retail
Heizer Software; PO Box 232019; Pleasant Hill, CA 94523; 510-943-7667, 800-888-7667 or 510-943-6882 (fax)

Text Invoicer
Invoicing/accounts receivable application
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0 or later.

SK Text Invoice-1 is a simple-to-use invoicing/accounts receivable application designed specifically for businesses that do not have a structured inventory. It lets users create, save and/or print invoices that have only a total dollar amount. SK Text Invoice-4 allows users four fields (up to 250 characters each line) in which to do invoicing. It also allows separate prices for each of the four lines, which it will total for users. Users pick the invoice that will best suit their company needs. Bids are created just like any other invoice, but the button "Hold" is checked. This prevents the invoice from becoming a charge in the accounts receivable section of the program.

Transoft Business Manager
Accounting, contact database, word processing, scheduling
Macintosh Plus or larger; 4 MB of RAM; hard disk drive.

Transoft Business Manager is designed to handle all of the administration and book keeping aspects of a business. It generates invoices, checks, customer charges, receipts, purchase orders and detailed information for contacts, customers and vendors. Features include: cash or accrual accounting; writes checks and reconciles accounts; integrated word processor prints letters, envelopes and mailing labels; calendar feature allows for scheduling of appointments, meetings, deadlines and more; keeps separate profit and loss statements for each project or subsidiary; print invoices and receipts; and handles multiple bank accounts. Some of the reports available include: Operating Reports (Accounts Receivable, Accounts Payable, Customer List, Contract Expirations, Activity Detail, Activity Summary, Contract Changes); Financial Reports (Balance Sheet, Trial Balance, Income Statement, Customer Statement, Vendor Statement); and Tax Statements.

VS*3 JobSight Contractors Accounting System
Integrated Job Cost package
Macintosh Classic II or larger; 5 MB of RAM; System 6.0.5 or later.

VS*3 JobSight is an integrated Job Cost package for the small to medium contractor or subcontractor. It monitors everything from the initial estimated value of a job, down to the direct or indirect overhead expenses applied to the job. Multiple job classifications, five different billing formats, individual job reconciliation and profit analysis are available. One-time entry of data into JobSight allows for the automatic transfer of information to A/P, A/R, PR and G/L, producing monthly statements, balance sheets and custom reports. VS*3 Remote Turnkey Support provides experienced personnel that are able to assist in installing and bringing the system live. Through standardized telephone interviews and training, Vertical Solutions Management is able to help eliminate the trial and error procedures usually associated with new system use.

What's It Worth?
Tax depreciation and amortization program (multiuser)
Macintosh Plus or larger; 2 MB of RAM; hard disk drive.

What's It Worth? calculates Book value, ACRS, MACRS, AMT, ACE, federal forms 4562/4626, ACE Worksheet, 6251 and amortization of intangibles. Pop-up menus make selecting a depreciation method easy. What's It Worth? will determine convention, HY or MQ, and then adjust depreciation methods to match. It automatically flags excessive section 179 entries. Individual asset depreciation history is kept by year and amount. Variable FY dates allow for monthly or to-date depreciation estimates, while Delete FY postings allows for what-if considerations. A location field provides tracking ability. Data may be imported from another MacSolutions product, What's Missing?, or other programs. Fifty-eight reports, including federal forms and supporting line item justification, provide useful information for decision making, general ledger entry or basis for tax preparation. What's It Worth? windows and documentation use large type for easier reading.
$495 retail
$25 retail; demo (deductible from purchase price)
MacSolutions, Inc.; 9124 N. McKenna; Portland, OR 97203; 503-289-7174

What's Missing?
Capital assets control program
Macintosh Plus or larger; 1 MB of RAM; hard disk drive.

What's Missing? uses anodized aluminum bar-code labels to make it easy for small or large businesses to keep an eye on their assets. Labels are eye readable and may be used with or without a bar-code reader, making them useful with a few dozen or a few thousand items. What's Missing? can easily and accurately track every capital asset and tell where it was last found, by whom, on what date, at what time and in what condition. Assets may be assigned a permanent location to determine if they have been moved. The program will predict assets due for replacement and replacement value at any time period chosen. Reports can identify items that have been lost, stolen, sold, destroyed or retired. What's Missing? may be used in either an annual batch or continuous inventory mode. Data may be transferred to another MacSolutions software program, What's It Worth?, for calculating financial and tax depreciation.
$495 retail; includes 54 asset and six location high-security anodized aluminum bar-code labels (bar-code readers can be bundled on request)
$25 retail; demo (deductible from purchase price; free on AppleLink)

WOS Activities Accounting
Helps schools keep track of Activity Funds
Macintosh Plus or larger; 2 MB of RAM (4 MB with System 7); System 6.0 or later.

WOS Activities Accounting is designed especially to help schools keep track of their Activity Funds (e.g., Athletics, Band, Clubs, etc.). WOS Activities Accounting will help schools keep track of these at the building and the district level. The system handles all functions of Activities Accounting, including printing POs and checks, plus 29 standard activity reports. The system has built-in Help windows and includes a Browse Function, allowing users to browse on lists of Activities, Vendors and History.
$395 retail

WOS Fund Accounting
Multiuser fund accounting
Macintosh 512K or larger; hard disk drive.

WOS Fund Accounting is a multiuser fund accounting program for the AppleTalk network that allows multiple Macintoshes to share data simultaneously using AppleShare. Features include: automatic transfer of data from one module to another; multiple fiscal years can be open at once; integration with WOSbase multiuser database; and a browse function that eliminates constant referring to paper lists. Budgetary General Ledger budgets and accounts for revenues and expenditures in a virtually unlimited number of funds and features up to 26 user-defined dimensions, immediate access to balances and specific data reporting. Payroll offers a virtually unlimited number of pay, deduction, fringe categories and up to 15 tax and retirement types, and features user-defined pay cycle, "exception-oriented" design and 14-month reporting. The Purchase Order/Voucher module gives a user the ability to enter, edit and list purchase orders, vouchers, vendor information and checks. It also maintains data on encumbrances, payables and disbursements for multiple funds and expense accounts. The Accounts Receivable module tracks charges and payments. Statements can be printed with complete transaction detail. Payment plans are supported and an unlimited number of transaction codes are allowed, which can be automatically totaled and individually edited.

Business Graphics

Business Graphics Toolkit
Produces business charts from data and labels
Macintosh Plus or larger; True Basic Language Version 2.0 or higher.

The Business Graphics Toolkit produces business charts from data. The program selects the scale, chooses good-looking numbers for the axes and draws the chart. The Business Graphics Toolkit works in all the True Basic graphics modes. The program features bar charts, histograms, line charts, area charts, scatter plots, comparison tables, I-beam and high-low-close charts. Multiple data sets may be plotted on a graph, and overlaid graphs are available. In addition, 13 point styles, four line styles and full color support are provided. A manual and two dozen sample programs are included.

ClarisImpact
Business graphics processing
Macintosh Plus or larger; 2 MB of RAM (4 MB with System 7); hard disk drive; System 6.0.7 or later.

ClarisImpact tightly integrates the three-step process of creating, editing and communicating business graphics with reports and presentations for powerful business communications. ClarisImpact is an eight-in-one integrated solution that automatically creates organizational charts, flow charts, data charts and tables, outlines, calendars and timelines. Users simply select the corresponding Model, an icon that displays which type of graphic users want. Users input needed data and the chart is automatically created. The graphic is output-ready or can be edited directly in a report or presentation. Users have the flexibility to select from professionally-designed styles that ship with ClarisImpact or import, create and customize their own. Seamlessly integrated word processing and presentation environments provide an instinctive way to mix business graphics in text-based reports, electronic or film slides, overhead transparencies and handouts. With XTND technology, users can also import a variety of data types from popular word processing, spreadsheet, database and graphics applications. Graphics file formats supported include EPSF, TIFF, PICT or PICT2, CGM, MacDraw II, MacDraw Pro, MacPaint and QuickTime Movie. The Claris Graphics Engine (CGE) provides seamless cross-platform (Mac and Windows) transparency across applications and platforms. ClarisImpact is native for Power Macintosh.

EasyFlow Mac V1.1
Flowcharting package
Macintosh Plus or larger; System 6.0 or later.

EasyFlow is a powerful flowcharting program that features an intelligent line-routing engine. Features include: multilevel, hierarchical structure, unlimited chart size, automatic text justification, comprehensive online help and support for color output. A split-window display option allows users to see simultaneous close-up and wide-angle views as they work. Included are shape libraries for standard flowcharting, data flow diagrams and organization charts. Also available are alternate-shape libraries that equip EasyFlow for such tasks as fault-tree, state transition and logic description diagramming, documenting auditing processes and mapping local area networks. EasyFlow for the Macintosh is completely compatible with charts created by the DOS version of the program.

FlexiGraphs 1.1.3
Chart that fills in the numbers
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.

FlexiGraphs is a revolutionary program that uses the visual impact of graphics for creating numbers used in forecasts, projections or data simulations. It is a quick way to do what-if analyses for business and science. Users instantly create a line, bar or pie chart that can be manipulated with the mouse. As users make changes using a palette of tools, the numbers behind the graphs also change. Users can draw a forecast, such as a revenue projection, then copy and paste the numbers into a spreadsheet, statistics package or any Macintosh application. The program includes FlexiPie, FlexiBar, FlexiLine and FlexiSpread. The Copy and Paste commands in FlexiGraphs transfer all of the numbers and graphics affiliated with the graphs to or from the Macintosh Clipboard in a standard text or PICT format. Special features include an equation calculator, the capability to set constraints and dependencies, curve fitting and superimposition of pictures onto a graph for use in comparisons.

FlowChart Express
Creates flowcharts
Macintosh Plus or larger; System 6.0.7 or later.

FlowChart Express is a simple-to-use tool designed specifically for creating great-looking flowcharts. Its many features include: standard ANSI flowcharting symbols; color and pattern support; 8-page by 8-page drawings; standard size or click-and-drag symbol creation; dashed and hair lines; 32,000-character notecards for supporting text; up to 20 files open simultaneously; and text that remains centered as a user types. Users can connect symbols on their drawing with just two mouse clicks. FlowChart Express gives users 12 different ways to connect symbols, plus a manual mode that allows users to create custom line connections. Connecting lines will automatically reconnect whenever a symbol is moved or resized.

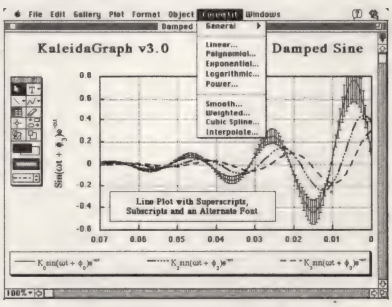
KaleidaGraph 3.0
Data analysis and graphing application
Macintosh Plus or larger.



KaleidaGraph is a graphing tool that provides powerful visual displays of quantitative information. This comprehensive analytical solution can be used to develop accurate journal-quality graphs that mathematically transform even the most complex data into elegant but functional graphical displays. Sixteen graph structures are provided for plotting up to 20 variables with precise, yet flexible control of statistical functions and data display elements. Data entry is made through screen editing and flexible file processing. Users can use Formula Entry or the programmable calculator to manipulate large amounts of data (32,000 points per column). New features in Version 3.0 include: import Excel files directly; perform multilevel sorts on data; and display date or time data in one of 12 different formats. KaleidaGraph provides 64 colors on an editable palette, user-selectable error bars with independent upper and lower types (percent of value, standard error, standard deviation, data column and fixed value) and complete object control. Users may store up to 16 user-defined curve fits for use on a single plot and extrapolate curve fits to the axis limits. Plot types include: line, scatter, double Y, high/low, probability, X-Y probability, stack histogram box, percentile, horizontal bar, stack bar, column, stack column, polar, pie, text and template.

Org Plus For Macintosh
Makes professional organization charts
Macintosh Plus or larger; 1 MB of RAM; two 800K disk drives or hard disk drive; System 4.1 or later.

Org Plus For Macintosh creates perfectly-proportioned, professional-looking organization charts quickly and easily. Users type names, titles and other text into each box. Org Plus automatically adjusts the boxes to fit a user's text. Users can add, delete or move boxes or entire departments, and Org Plus does all the redrawing. Users can choose from more than 50 different chart, box and line styles. Org Plus applies a user's choice to the entire chart or any set of boxes selected. Org Plus will also make a user's chart as compact as possible using the Make Fit command. Users simply tell Org Plus how many pages they want the chart to fit on, and the program does the rest. Org Plus For Macintosh also interfaces with Org Plus Advanced, its PC version.

OrgChart Express
For organization charts and personnel data management
Macintosh Plus or larger; 1.5 MB of RAM; hard disk drive recommended; System 6.0.7 or later.

OrgChart Express is an easy-to-use organizational charting program with built-in data management. With OrgChart Express, users will produce concise, impressive organization charts while simultaneously managing employees' personal and job-related data. Moving employees to new positions is as easy as click and drag, leaving job information intact. Users can assign multiple positions to the same person to accommodate special projects. Search and sort functions provide access to all chart data. Users can import and export text with other applications to produce mailing or phone lists; create one chart or separate charts for each department or division, all within one document; and move tiles around freely, then snap them back into place using an optional "Clean-up" command. A mouse click will show or hide lower branches of large charts. OrgChart Express features user-definable box and line styles, color and gray-scale support and password protection.

QuickPie 2.1
Pie chart desk accessory and application pair that support a wide selection of pies, including clip art graphics
Macintosh 512KE or larger.

QuickPie is a desk accessory and application pair that provide specialized pie charting functions. Both programs have identical functionality, can save to disk and share files. Pie charts can be created in a wide variety of styles. Clip art graphics, either color or black and white, may be incorporated into the face of the pies. A collection of clip art images are supplied with the program, such as a color pizza and copper penny. Other features include three-dimensional options with variable angle, shadow height and pie thickness. The program allows complete control over just about every aspect of the pie, so the data is presented in a way that best suits a user's needs. Users can generate pie charts with minimal effort and without sacrificing quality.

Relational Objex
Relational drawing
Macintosh 512K or larger.

Much like a spreadsheet interrelates numbers, Relational Objex lets users "link" objects in a drawing to other objects. When the controlling objects are

resized or repositioned, the linked objects resize and reposition themselves automatically. Because Relational Objex lets users relate objects in a drawing to one another, updating is easy. It also lets users make "what if" changes, seeing the results right on a drawing. The relationships between objects can be as simple or as complex as desired. It is not necessary to enter relationships at all, making the program work like any other drawing program. However, when objects do need to be related, the program lets users link them intuitively and visually. Relational Objex can import and export color PICTs. It is MultiFinder friendly, works with multiple monitors and opens as many windows as memory allows. Relational Objex's calculation capability includes more than 30 built-in operations and functions.

SuperGraph And SuperAnalyst
Create publication-quality graphs and charts
Macintosh Plus or larger.

SuperGraph and SuperAnalyst provide a powerful set of plotting capabilities for the creation of a wide range of publication-quality graphs and charts. SuperAnalyst also includes a complete set of function and data analysis features. These applications implement the complete Macintosh user interface, and both are intuitive and easy to use. They provide users with complete control of the appearance of a plot, using the mouse, floating palettes and dialogs to adjust every characteristic and setting of the plot. SuperGraph and SuperAnalyst allow for smoothing, sorting, filtering and modifying of data, error bars and graphical editing of plotted points. Both applications provide for mathematical manipulation of data, input and output of multiple file formats, function generation, tools for customizing plots, 16 plot types and overlaying of multiple plots. The number of points that can be plotted or analyzed is limited only by the memory of the computer being used.

SuperAnalyst provides additional features for a wide range of analysis capabilities, including data and function integration, curve fits, first and second derivatives of data and functions, fast Fourier transforms for any number of points, real and complex roots of equations, cubic splines, interpolation and more.

TopDown Flowcharter 4.0
Hierarchical design software
Macintosh Plus or larger; hard disk drive recommended; System 6.0.7 or later.

TopDown is the only cross-platform drawing tool made especially for creating charts and diagrams. Some of its uses include flowcharts, organization charts, operating procedures, data flow diagrams, training materials, project designs and system documentation. TopDown allows Macintosh users to share files created in TopDown for Windows, and create their designs in general terms, then show or hide the details of each component. Key features include ANSI and custom symbols, full control over line placement, auto line rerouting, text import, text binding to connecting lines, standard and variable size symbols. Other features include full pattern support, color support, dashed hair and curved lines, 24 Node Connectors for engineering drawings, text search, extensive online help and the capability to create a Notecard for each symbol. TopDown provides header/footer capabilities, auto page numbering and supports Publish and Subscribe. The easy-to-use interface will be familiar to everyone who has used Macintosh drawing programs. TopDown works like a stack of drawings. Symbols on each drawing can be further detailed on a lower-level drawing. Symbols can be connected with lines to show process or information flow. There are 12 paths to choose from. TopDown even lets users connect symbols that reside on different drawings by attaching an OffPage Connector to each symbol. TopDown can generate an outline, a list of symbol interconnections and a list of data inconsistencies. These reports can be exported as text files.

Creative/Animation

ADDmotion II
Animation program
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; HyperCard 2.1; System 6.05 or later.

ADDmotion II is a 24-bit color paint, animation and sound extension (XCMD) that integrates seamlessly into HyperCard 2.1, providing a comprehensive Color Paint environment, a Media Controller for the sequencing of animations and a Sound Recording/Editing environment. Color Paint allows for the easy creation of actors and props and contains specialized features, such as onion-skinning (to align and trace a previous actor's cel) and anti-aliasing. Paint graphics can be imported as PICT, MacPaint, PICS and Scrapbook files, with support for 24-bit color. The Media Controller allows for direct manipulation of foreground and background objects, over a series of frames, for the creation of animation on any card within a HyperCard stack. Multiple sounds can be added using ADDmotion's built-in record feature, and can then be manipulated using the Sound Editor. ADDmotion provides a very high degree of interactivity with HyperTalk, and animations within a HyperCard stack can be distributed royalty free using ADDmotion's runtime animation XCMD. The program supports QuickTime and many other System 7 features.

The Animation Stand
Desktop animation production system
Macintosh or PowerPC family.

The Animation Stand is a complete broadcast and film quality desktop animation production system. Whether users are planning to create a full animation feature or add animation effects to a business presentation, The Animation Stand offers all the sophisticated tools and special effects of high-end animation systems at a price affordable to even smaller animation houses and independent animators. The Animation Stand features multiplane camera control with trucks, pans, zooms, rotation, squash and stretch, virtual camera control, slow-in/slow-out and motion 'tweens, an optical and special effects system with mattes, faders and gels, a top-notch inking and painting suite and complete transport control to film, tape and video disk. Other features include an unlimited number of frames, layers, mattes and gels, directional wipes, real fades and dissolves, anti-aliasing, real-time playback from memory at up to 60 FPS, SMPTE control and production cost reporting. Full QuickTime and drag and drop support is included.

Animation Works
Animation program
Macintosh Plus or larger; 1 MB of RAM (2 MB for color).

Animation Works gives users the ability to easily create high-impact, moving business presentations, training, education, video graphics and titling. It lets users combine and sequence moving text, graphics and true cel animation with sound and professional wipes. Powerful paint tools, onion-skin, auto-rotate and auto-zoom are just a few of the features that make it easy to create dynamic backgrounds and "actors" (animated text and graphics). A VCR-style interface and path-based animation makes it as simple as pushing buttons and drawing lines to build effective presentations of all kinds. Features include: supports PICT, PICS and Scrapbook file formats, plus SND or MacRecorder sounds; System 7 TrueType and ATM support for high-quality bouncing, scrolling, rotating or zooming titles; and special effects, such as animated mattes, professional wipes, gradient fills and gravity simulation.

ArchiMovie
Animation software
Macintosh II; 4 MB of RAM recommended.

ArchiMovie serves as an exciting complement to Architron, UNIC's professional integrated CAD software. It works in the background under MultiFinder, collecting screens from Architron and other programs to build animations. ArchiMovie does not create graphics or text. It allows users to capture a series of images produced in other applications, and to play this series back in a variety of modes. The films can be with or without sound, and in color, as well as black and white. ArchiMovie is easy to use and consumes a miniscule amount of memory. A film can be larger than the RAM available, and as big as the capacity of the storage medium.

Auto-PICT QT 2.0
V-LAN-compatible animation software
Macintosh II or Quadra family.

Auto-PICT QT is an animation application that allows users to put PICS, PICT and QuickTime movies out to videotape or videodisc frame accurately. It also allows users to digitize frames of video to save as PICT, PICS or QuickTime movie files. Auto-PICT QT works with any Macintosh II or larger computer, any video card (NTSC/PAL output) or scan converter and a V-LAN-compatible controller, such as the Alix desktop module. Version 2.0 supports VDIG capture (card must support "single" live video frame and have a QuickTime VDIG component) and Adobe Premiere time code resource. This new version retrieves and stores Auto-PICT QT record/capture lists and allows users to preview the pictures and movies before adding them to the list. Auto-PICT QT also controls players and recorders for overlay recording (keying) using the Truevision NuVista+ card. Auto-PICT QT works with all major Macintosh three-dimensional graphics and animation software, including Swivel 3D, Macromedia Director, Infini-D, Strata 3D, Sculpt 3D, DynaPerspective, The Animation Stand, MacTopas and Adobe Premiere.

Body Electric 3.5
Dynamic real-time animator
Macintosh with 68020 or larger processor; math coprocessor; 8 MB of RAM.

Body Electric, the dynamic real-time animator for VPL Virtual Reality systems, is now available by itself. BE is a 3-D motion control system and a powerful tool for linking Macintosh with external devices. BE records time-stamped event sequences, generated algorithmically or by example; processing on the fly and post-processing are both definable by the user. BE plays back and allows editing of these sequences offline. Scripting facilities can be used for automated image generation, database and spreadsheet interface or MIDI instruments. BE does not require a rendering card and provides the user with a diagrammatic representation of the objects in the VR world. The BE programming environment is made for various levels of users. Four levels of interaction and programming are offered, giving users a choice of interface for their applications ("box and arrows" style; scripting; user-

Cinemation
Creates interactive presentations
Macintosh Plus or larger; 1 MB of RAM for black and white (2 MB recommended); 2 MB of RAM for color (4 MB recommended).

Cinemation is for presenters, trainers and educators who want to make their presentations come alive without spending too much time learning how to do it. With Cinemation, users can create powerful, interactive presentations complete with professional-quality animation, clickable buttons, sound effects, music and video. Cinemation animation software automatically animates text from imported PowerPoint or Persuasion files. And Cinemation comes with animated presentation templates, clip animations, buttons, backgrounds, transitions, music and sounds. To create animations from scratch, Cinemation includes a full-color Paint and Animation program, with sophisticated capabilities that are easy to use. For example, Ghosting lets users view other frames through a transparent easel, and Fill In Motion gives realistic inertia to moving, zooming, spinning and cropping objects. Users can control their movies from within HyperCard and can distribute movies with the Cinemation Player.

CinemationCD
Creates interactive presentations
Macintosh Plus or larger; 1 MB of RAM for black and white (2 MB recommended); 2 MB of RAM for color (4 MB recommended); CD-ROM drive.

CinemationCD offers users the most popular features of Cinemation — features such as "click and drag" animation and the ability to stretch motion for cropping, scaling, rotation and movement across the screen automatically. CinemationCD makes it easy for presenters, trainers and educators to create interactive presentations complete with professional-quality animation, sound and QuickTime video clips. CinemationCD also automatically animates presentations created in PowerPoint or Persuasion.

ElectricImage Animation System 2.0
Animation and rendering system
Macintosh II or Quadra family; FPU; 8 MB of RAM (32 MB recommended); hard disk drive.

The ElectricImage Animation System (EIAS) is a 3-D graphics system for computer graphics/animation professionals using high-end Macintosh/Silicon Graphics Inc. computers. EIAS is: ElectricImage — animation choreography interface integrating Transporter, the model converter utility and Mr. Font; Projector, for VTR control, image file conversion, digital compositing; and Camera, the rendering engine, works on Silicon Graphics IRIS/Indigo workstations. Electric Image's SGI Camera is sold separately. Customers render to SGI machines over Ethernet networks. EIAS imports, renders/animates objects from multiplatform modeling programs and includes sync sound animation. Sound frequency import ranges from 5 KHz to 64 KHz. EIAS plug-ins include: Mr. Nitro (blows models apart); Lens Flares (create lens flares at assigned light source); Particle Systems (control effects: fire, sparks, water, etc.); and Mesh Objects (create mesh objects, impart special motion to objects). Summation mapping, adaptive anti-aliasing and deformations (twist, taper, bend) are included.

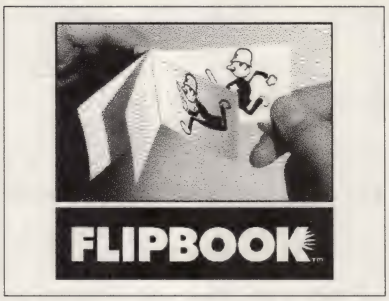
FlipBook 1.0
Enables users to create old-time moving picture flipbooks
Macintosh Plus or larger; 2 MB of RAM; QuickTime 1.5; System 6.0.3 or later.



FlipBook enables amateur and professional movie makers to create old-time moving picture flipbooks. Importing QuickTime and PICS animation files, FlipBook prints flipbooks of home movies, cartoons, morphs and more. FlipBook users are provided with tools for formatting each movie frame as a series of printed flipcards using standard paper and any Apple-compatible printer. Scissor lines and card numbers are printed on each flipcard, and the size of both the flipbook and its binding are adjustable. The FlipBook package ships with 50 sheets of FlipPaper, a patent-pending, laser-printable paper with pre-perforated flipcards, enabling users to print, punch the cards and bind the flipbook — eliminating the need for scissors. FlipBook also ships with the FlipBook User Guide and a 150-page animation textbook.

Frame By Frame
Graphic animation system
Macintosh II or larger.

Frame By Frame Graphic Animation Systems from IMS enable producers to capture VFW or QuickTime movies and computer graphics directly to or from Panasonic videodisc recorders (OMDRs) for instant playback of full-screen, full-resolution video. Rock-solid still frame recording and playback capability give the user the highest quality video input for computer capture boards and a trouble-free vehicle for handling output from (D1, D2, D3) digital video systems. There has never been an easier way to automate multimedia production or delivery. IMS gives users the generic device drivers to prepare, edit and refine still or motion video on any computer platform directly from multimedia programs, such as Director, Premier, Windows, Toaster Lightwave and the like.

Life Forms
Three-dimensional human figure animation software
Macintosh SE or larger; 4 MB of RAM; hard disk drive; System 6.0.5 or later.

Life Forms is three-dimensional human figure animation software that allows users to create realistic and accurate human movement sequences for use in multimedia productions. Using Life Forms, users can choreograph complex movements, such as dance, gymnastics and ice skating. Due to its accuracy, Life Forms can also be used as a visualization tool in medical therapy, human interface design and time-and-motion studies. Life Forms includes a Shape Library that contains common positions, such as sitting, standing, jumping and various sports and dance poses. These pre-defined sequences of motion can be modified in the Shape Palette and then inserted directly into a sequence. The Stage Window gives an overview of the motion of the figures and their relation to each other. An intuitive Time Line, where movement of multiple figures is synchronized, provides an overview of the entire animation at a glance. The Figure Editor is used to create and edit shapes and provides precise control for posing a figure in any given frame. Animations can be imported into Swivel 3D Professional and Three-D where they can be textured, shaded, rendered and animated. These files can then be imported into Macromedia Director, Magic or FilmMaker where synchronized sound and special effects can be added. Output can also be incorporated into HyperCard using XCMD software that is included in the package.

■ **LogoMotion 1.5**
Create 3-D movies
Any color Macintosh with FPU; 8 MB of RAM; System 7.0 or later; 12-inch or larger monitor.

Specular LogoMotion allows users to create dazzling 3-D QuickTime movies within minutes for a variety of multimedia and desktop video applications. With LogoMotion's alpha channel support, composing 3-D animations over video or stills is a breeze in programs like Adobe Premiere. Users can import any Adobe Illustrator or Aldus FreeHand EPS file, or instantly model 3-D text in any font; create objects using lathe and extrude workshops; and add surfaces like chrome, silver or gold, or make their own. LogoMotion's time-based sequencer then allows users to animate the text or objects in any way. Included are pre-designed "Stagehands," professional-looking camera moves, lighting effects, props and backdrops.
$149 retail
Specular International; 479 West St.; Amherst, MA 01002; 413-253-3100, 800-433-7732 or 413-253-0540 (fax)

MacAnimator Pro V-LAN
Performs high-speed recording of animation to videotape and high-speed capture from tape or disc using any V-LAN-compatible video device
Macintosh II or Quadra family.

MacAnimator Pro V-LAN performs high-speed recording of animation to videotape of disc and high-speed capture from tape or disc using any V-LAN-compatible video device. In both record and capture modes, the FastPass feature provides dramatically faster performance and reduces wear and tear by recording and capturing multiple frames during each pass of the tape. What used to take hours with sequential recording or capture of single frames can now be accomplished in minutes. For recording animation to video, MacAnimator Pro V-LAN works with any NTSC or PAL video output card for the Macintosh, at any resolution. With MacAnimator Pro V-LAN, users can capture video frames as either numbered PICTS, PICS files or QuickTime movies (including audio). In all cases, it supports QuickTime image compression. It also performs both interactive and automatic alpha channel rotoscoping and QuickTime move overlays. MacAnimator Pro V-LAN lets users open a background PICT file or QuickTime movie and perform alpha channel compositing of foreground PICTs or QuickTime movies. Despite its rich feature set and depth of capabilities, MacAnimator Pro V-LAN is easy to use. Its clean design and intuitive controls assure that users will be up and running within minutes.

Macromedia Director 4.0
Professional multimedia authoring
Macintosh Plus or larger (Macintosh II recommended); 2 MB of RAM (4 MB recommended); hard disk drive; System 6.0.5 or later.

Macromedia Director is a powerful animation and authoring tool for creating high-quality, multimedia presentations, animations and interactive applications. Users can create, combine and synchronize graphics, text and animations with audio and video; add full interactivity with buttons and scripts; author, edit, playback, export and import QuickTime movies; and add interactivity to QuickTime movies with enhanced Lingo scripting. Version 3.1 adds new expanded Help, increased Score functionality and higher performance. Users can incorporate 3D models from Swivel 3D, animation from Macromedia Three-D, sounds from MacRecorder, as well as all standard Macintosh file formats. Macromedia Director includes Macintosh Player for license-free production distribution and Accelerator for smoother animation playback.

Director Players allow users to convert fully interactive Macromedia Director productions created on the Macintosh for playback under Microsoft Windows or Silicon Graphics IRIS workstations with complete interactive control of CD-Audio and digitized sound. They include a license-free distribution policy for projectors.

PROmotion 1.0
Animation, presentation and QuickTime movie creator
Macintosh Plus or larger; 2 MB of RAM (4 MB for color); System 6.0.7 or later.

PROmotion provides all the necessary tools for novice or professional animators to create animations, presentations or QuickTime movies. It includes a path-based Animation Editor, 24-bit Color Paint and Animation Effects Editor, Sound Editor and Cel-Sequencer. Key product features include: intuitive user interface (animated help); path-based Animation and Cel-Sequencing; 24-bit Color Paint and Cel Editor; actor "onion-skinning" and "object tweening"; built-in sound recording and editing; import/export standard formats; exports to QuickTime movies, stand-alone players, PICS, After Dark modules or PROmotion files; and royalty-free distribution. Additional features include: print-to-video with full Sony VISCA support; extensive System 7 support; includes PrimeTime CD-ROM with Media Browser, actors, props, sound libraries, sample animations, QuickTime Extension and QuickTime movies; includes Principles of Animation Guide; and pop-up scripting eases creation of interactive animations.

Scenery Animator
Scenery rendering and animation program
Macintosh II or larger, including Power PC; 4 MB of RAM; color monitor; System 6.0.7 or later.

Scenery Animator is a 3-D terrain rendering and animation program, capable of producing realistic scenes with trees, clouds, lakes and snow. It uses three-dimensional data to reconstruct real-world places, such as Yosemite, the Grand Canyon, Mt. St. Helens and Hawaii. Data is available for many other places. Scenery Animator also contains a powerful, built-in fractal landscape generator that can create billions of unique terrains. Users can position the "camera" anywhere within a landscape and view it from any perspective. Users can draw a flight path for animation and simulate a flight through the landscape. The colors, lighting and many other settings are adjustable. Pictures may be saved in PICT or TIFF format. Animations may be saved as QuickTime, PICS or numbered PICT files. It supports 8-, 16- and 24-bit color and includes QuickTime and MoviePlayer from Apple. A PowerPC native version is available for maximum rendering speed.
$149 retail
Natural Graphics; 4603 Slate Ct.; Rocklin, CA 95677; 916-624-1436 or 916-624-1406 (fax)

Sculpt 4D V4.0
Three-dimensional design, visualization and broadcast-quality animation software
Macintosh II, Performa, Centris, Quadra or PowerPC family; 16 MB of RAM; 80 MB hard disk drive; math coprocessor; 8/16/24/32-bit color display; System 7.0 or later.

Sculpt 4D's intuitive interface combines modeling, texturing, ray trace rendering and animation functions into one seamless environment. Without leaving the Sculpt modeling interface, users can precisely animate any vertex, object, target, location or lamp independently. Sculpt 4D enables users to choreograph broadcast-quality animated segments ranging from architectural walk-throughs and corporate flying logos to complex, organic character animation. Wireframe preview allows animators to quickly check all motion before committing to final photorealistic rendering. Sculpt's special 3-D shaders and ray trace rendering automatically take care of the otherwise laborious details of accurately animating reflection maps and casting shadows. Automatic support for single frame control to videotape is incorporated. Animations can also be compressed in 8- or 24-bit and played real time from the computer's RAM. Users can turn their Macintosh into a multimedia center. Sculpt 4D runs native on the PowerPC.

Strata StudioPro
High-end 3-D animation application
Macintosh II family with FPU or Power Macintosh; 8 MB of RAM; hard disk drive; System 7.0 or later.

Strata StudioPro is an expert-level, 3-D animation program that offers users sophisticated tools not available on desktop systems. Strata StudioPro's 3-D splines, new rendering technology and a powerful Event-based Animation System give users "primo" tools in a completely integrated interface. Animation special effects is the focus of Strata StudioPro. It utilizes an open software architecture that allows plug-ins. Strata StudioPro comes with several exclusive special effects extensions. The program will write PICT, TIFF, PICS, QuickTime, DXF and EPS files. Image and animation files support alpha-channels, making photo and video compositing possible in other professional applications.

Three-D
Three-dimensional animation, rendering and image manipulation tool
Macintosh SE/30 or larger (Macintosh II recommended); 5 MB of RAM; hard disk drive; 32-bit QuickDraw; System 6.0.5 or later.

Three-D is a three-dimensional animation, rendering and image manipulation tool that lets users import documents created with three-dimensional modeling and CAD software and then add motion and shading to create photorealistic animations. Three-D consists of three separate modules that operate together: 3D Works, RenderWorks and ImageWorks. 3D Works is the animation module in which users can import 3-D models and easily and directly animate multiple objects, cameras and lights in 3-D space. RenderWorks is the visualization module in which color, texture maps, surface material, shading and lighting attributes set in 3D Works are applied to models and animations for realism and exciting visual effects. ImageWorks is the compositing and output module where a user can digitally composite 2-D and 3-D images and animations and output these as PICT or PICS files for inclusion in Macromedia Director or other programs or record directly to videotape.

■ **ImageCELs Botanicals**
Learn about plants from around the world
Any Macintosh; modem.
ImageCELs Botanicals are high-resolution, photorealistic plants from around the world. This collection includes mature and juvenile trees, large and small shrubs, indoor plants, perennials, annuals and groundcovers. From the coldest to the warmest climates, with vibrant spring blossoms to beautiful fall color, these exquisite plants can be used in all computer graphics applications. Each plant comes with a detailed description, such as botanical name, common name, hardiness zone, seasonality and plant size. Additional information includes pixel height and width, plus pixels per square.
$10 each retail; quantity discounts available

■ **Peeping ROM**
Stock photography
Macintosh SE/30, LC, II, Quadra or Power Macintosh; 4 MB of RAM; 40 MB hard disk drive; 8/24-bit monitor; CD-ROM drive.
Peeping ROM is an electronic image catalog packed with 928 images that reproduce beautifully on anything from laser printers to a magazine layout. A versatile image collection, there are dozens of themes in six major categories: Abstracts; Clouds and Skies; Fabric; Granite and Marble; Nature; and Nostalgia and Travel. Included is the image editing program Color It! for easy conversion to black and white, duotone, TIFF, EPS, RGB or CMYK. The on-screen documentation and an image browser, Multi-Ad Search 2.0 Run Time, make selecting a photo a breeze. There are no royalties or hidden charges for using any of the images on the disc.
$129.95 retail
D'pix, Inc.; 929 Harrison Ave., Ste. 205; Columbus, OH 43215; 614-299-7192, 800-238-3749 or 614-294-0002 (fax)

Creative/Drawing & Painting Programs

addDepth
Instant depth and perspective for type and line art
Any color-capable Macintosh; 4 MB of RAM; System 6.0.5 or later.

addDepth is a graphics application that adds depth and perspective to line art and type. It allows users to easily and quickly create the powerful impact of 3-D graphics in illustrations, logos, presentations and packaging comps. It offers full support for TrueType and Type 1 fonts and Adobe Illustrator, Aldus FreeHand, MacDraw and Canvas. addDepth offers full control over depth, extrusion and bevels; orientation in three dimensions; and vanishing point perspective.
$149 suggested retail
Ray Dream Inc.; 1804 N. Shoreline Blvd.; Mountain View, CA 94043; 415-960-0768 or 415-960-1198 (fax)

Adobe Illustrator 5.5
Electronic tools for single-page design and layout
Macintosh with 68020 processor or larger; 4 MB of RAM; hard disk drive; floppy disk drive; 13-inch color monitor; System 6.0.7 or later; CD-ROM drive to view interactive demos.

Adobe Illustrator is a powerful design tool that includes text handling capabilities, automatic graphing and ease-of-use features. Users can enter any number or combination of typeface characters on screen, without working through a cumbersome dialog box; manipulate and edit text any way desired on screen, including adjusting the kerning, placing text on a curve and editing PostScript Type 1 typeface outlines; wrap text around an object; type in or import data from popular spreadsheet programs and choose a style; customize data with shadows, patterns or textures; change data in a file and all art is automatically updated; expanded toolbox makes it easy to draw straight lines and curves, group and ungroup objects in complicated drawings, blend and transform; instruction bar that guides users through using the program and the tools; tools for freehand sketching and automatic tracing of scanned images; blend tool for creating airbrush effects; the capability to create custom PostScript language patterns; full Pantone Matching System color capability; convert MacDraw files to Adobe Illustrator files; the capability to produce high-quality color separations; and more. With Adobe Illustrator, users can create, edit and produce high-quality text pages and graphics.
$595 retail
Adobe Systems, Inc.; 1585 Charleston Rd.; PO Box 7900; Mountain View, CA 94039; 415-961-4400, 800-833-6687 or 415-961-3769 (fax)

Adobe Streamline 2.0
Line art conversion
Macintosh Plus or larger; Adobe Illustrator 3.0.

Adobe Streamline converts high-resolution bit-mapped images — from electronic files or from scanned drawings, illustrations, photographs, technical illustrations, forms or schematics — into Adobe Illustrator or Encapsulated PostScript language files. After an image has been converted, a user can keep the image as-is and print it on any PostScript-language printer, export it to a page-layout program or modify it in a drawing program, such as Adobe Illustrator or Aldus FreeHand. Dialog boxes simplify decision making and give users subtle control over options, such as conversion method, matching bit maps, use of straight vs. curved lines, variations in gray scale (2 to 16 levels) and tints and colors.
$195 retail
Adobe Systems, Inc.; 1585 Charleston Rd.; PO Box 7900; Mountain View, CA 94039; 415-961-4400, 800-833-6687 or 415-961-3769 (fax)

Aldus FreeHand 4.0
Drawing program for producing high-quality graphics
Macintosh Plus or larger (IIci or larger recommended); 2 MB of RAM (8 MB recommended); hard disk drive; PostScript-language or QuickDraw-compatible output device; System 6.0.7 or later.

Aldus FreeHand is a comprehensive drawing program for producing high-quality graphics. The program can trace graphics with basic drawing tools or advanced lines with Bezier curve tools. Objects and text can then be manipulated using one of FreeHand's special effect features, such as graduated fills of text and objects and the ability to scale, rotate, reflect and skew objects in text. Aldus FreeHand's color support consists of color separations for spot color and the four process colors (CYMK), or a combination of both. Users can display up to 256 colors on a Macintosh II color monitor, and specify color screen percentages for printing color tints. Additional features include 200 independent user-assigned layers, undo and redo options for the last eight actions, multiple levels of magnification for viewing work on the screen and the ability to edit in the Preview mode. Other features include: on-screen colors, styles and layers palettes that list the line and fill colors, graphic styles and layers that users create in an illustration; enhanced text controls; WYSIWYG display of text effects; and includes a built-in color separator that produces full process color separations for all parts of an illustration. Features new to Version 4.0 include enhanced text controls, intuitive color controls, a streamlined user interface, extensive graphic capabilities and multipage layout functions.
$595 retail
Aldus Corp.; 411 First Ave. S, Ste. 200; Seattle, WA 98104; 206-622-5500, 800-685-6636 or 206-343-4248 (fax)

Aldus IntelliDraw 2.0
Cross-platform, "smart" drawing program
Macintosh Plus or larger; 4 MB of RAM (5 MB with System 7); hard disk drive; System 6.0.5 or later.

Aldus IntelliDraw provides high-powered drawing tools to help users create and refine the accurate graphics they need every day. Designed to quickly perform many of the drawing tasks of non-artists, business, technical and administrative professionals, IntelliDraw has the power to do much of the drawing for users. Even if users don't draw, new "Drag-and-Drop" Smart Templates give them a head start. It can be used for technical drawing, business graphics, engineering schematics, flow diagrams, organizational charts, simple drafting, space planning and much more. It includes the Symmetrigon tool to quickly produce single or multisided symmetric shapes and loads of ready-to-use clip art. And users can share files seamlessly between IntelliDraw's Macintosh and Windows versions.
$99.99 retail
Aldus Corp. Consumer Division; 5120 Shoreham Pl.; San Diego, CA 92122; 800-888-6293 or 619-558-8723 (fax)

Aldus SuperPaint 3.5
Painting, drawing and image enhancement
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.5 or later.

Aldus SuperPaint is a versatile personal art program that lets everyone — not just skilled artists — quickly produce attractive results. It combines painting, drawing and image-enhancement capabilities in one program. Users can access 1- through 32-bit documents capabilities without a 24-bit card. The interface includes pop-ups, tear-away menus and hot keys to easily access tools and palettes. Tools and features work together intuitively — there is no restriction to use particular tools for particular effects. Customizable textures and gradients are available. SuperPaint includes direct scanner support through TWAIN, as well as support for QuickTime and Kodak Photo CD. It includes draw and paint layer plug-in tools and support for Aldus Gallery Effects. A Copy Brush tool and color clarity filter have been added to enhance the existing image-enhancement capabilities. SuperPaint supports RGB, HSB and CMYK color models and exports as TIFF or EPS. Other file formats include import of color, black and white and gray-scale TIFF, PICT, PICT2, EPS, Startup Screen and MacPaint files. SuperPaint is System 7 savvy.
$49.95 retail
Aldus Corp. Consumer Division; 5120 Shoreham Pl.; San Diego, CA 92122; 800-888-6293 or 619-558-8723 (fax)

Amazing Paint 1.0.3
Black and white paint program
Macintosh 512K or larger.

Amazing Paint is a low cost, innovative black and white painting program. Some of the program's unique features include: multiple undos, the Magic Wand, the Shape Selector and more powerful Pencil, Pattern, Spray Can and Custom Brush tools. The Magic Wand is a selection tool that will select a "filled" area with a single click. The Shape Selector allows users to make selections with circles, triangles, free-form shapes, arcs and predefined shapes. Amazing Paint's Pencil has selectable "lead" sizes from a single pixel to as large as 8 by 8 pixels. Amazing Paint's Patterns can be rotated, inverted and can have different ink properties, including transparent and overlay. All tools that draw can take advantage of these patterns. Custom Brushes can be made using the brush editor. Brushes can be drawn from scratch or "grabbed" from any document. The Spray Can has adjustable spray size, pattern and spray speed. Text in Amazing Paint can range from 9 to 999 point font sizes. The program is both Adobe Type Manager and Apple TrueType compatible. Text can have any pattern applied to the text or its background. Other special effects include vanishing point perspective, rotation, slanting and distortion. Any part of an Amazing Paint document can be printed after it has been selected. Amazing Paint includes the capability to save a selected area or a document directly to the Scrapbook or to a MacPaint or PICT file.
$49.95 retail
PrairieSoft, Inc.; PO Box 65820; West Des Moines, IA 50265; 515-225-3720

Apprentice
Painting-creation program
Any Color Macintosh; 4 MB of RAM; System 7.0 or later.

Apprentice is a paint program that thinks like an artist, not a computer. Now even beginners can create artwork like oil paintings, watercolors, pastels and more. It's way more fun than drawing with lines and circles, like most paint programs. Apprentice makes it especially easy for beginners to make great paintings from scratch. It's educational, too — special tutorials examine works of the masters, teaching the basics of creating and appreciating art. Users can also turn a scanned image into a painting in seconds. Just choose an image, grab a brush and slap on some paint — it's easy because Apprentice automatically chooses the colors, brushstroke by brushstroke.
$69 retail
Delta Tao Software, Inc.; 760 Harvard Ave.; Sunnyvale, CA 94087; 408-730-9336, 800-827-9316 or 408-730-9337 (fax)

AXA WaterColor
Recreates the natural process and results of watercolor painting on the Macintosh
Macintosh Classic or larger; 2.5 MB of free RAM; hard disk drive; gray-scale or color monitor and 8- or 24-bit video card recommended; System 6.0.3 or later.

AXA WaterColor recreates the natural process and results of watercolor painting on the Macintosh. Users mix colors together to make new colors or shades — use red and yellow to make orange or blue and yellow to make green. Users control the shape, size and texture of the brushes and the amount of water on the paper. These settings determine the way the colors blend and bleed as users paint. Brush strokes fade as the brush runs out of paint. AXA WaterColor is an ideal learning tool for beginning artists and an excellent working tool for professionals.
$79 retail
AXA Corp.; 17752 Mitchell, #C; Irvine, CA 92714; 714-757-1500 or 714-757-1766 (fax)

Bliss Paint
Animated color painting
Macintosh II or larger; 8-bit color.

Bliss Paint interactively creates animated color paintings using real-time color synthesis and sequencing. Colors melt and flow as the user creates images from a large variety of automatic scribblers. Scribblers include a variety of geometric, organic and abstract form generators designed for color animation. Colors may be orchestrated with wave shapes, frequencies and amplitudes, all controllable from the keyboard. Bliss Paintings can be used in the Bliss Saver screen saver companion product. Sound input and MIDI instruments can be used to control the color synthesizer. Pictures may be saved as PICT files for other applications. Pictures may be reloaded for more color animations and drawing. Bliss Paint animations

can also be saved as QuickTime movies for use in multimedia productions. Complete online documentation and Balloon Help are included.
$80 retail

BrushStrokes
32-bit full-featured paint and image editing program
Macintosh LC or larger; 4 MB of RAM; hard disk drive; System 6.0.5 or later.

BrushStrokes, a 32-bit color paint program featuring a rich set of customizable tools and the unique "How to Paint with BrushStrokes" guide, is designed to provide maximum flexibility and enjoyment for both new and experienced artists. It complements existing Claris graphics-oriented products, Claris Draw and Claris Impact, as well as adding a whole new creative dimension to artistic expression via the Macintosh. Features include: image editing; shading and gradients; transformation tools; more than 30 different brushes; spray can, rubber stamp, grid and arc tools; utilizes drop-in tools from other programs; masking; seven color palettes; 32-bit color simulation; import/export support; and more.
$69 retail

CA-Cricket Draw III
Business graphics
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; 32-bit QuickDraw; System 6.0.7 or later.

CA-Cricket Draw III makes creating graphs easy. In seconds users can convert raw data into complete, professional-looking, publication-quality graphs. There are no complex dialogs or commands to learn and no lengthy procedures to follow. Editing graphs is easy — users just double-click a graph component or other object, make changes in the dialog that appears and view the results immediately. Features include: choice of 12 different graph types with the abiltiy to overlay; support for importing databases; easy, direct data entry and editing; a full range of mathematical operations on data, including logarithmic, trigonometric and exponential functions; the ability to plot 1,000 columns by 32,000 rows of data; full text editing capacity; regression curve fits, interpolation and error bars; full-page layout with editing tools; export to page layout, word processing and graphics programs; customized graphs can be saved as formats to apply to other data sets; and is System 7 savvy, including Publish and Subscribe.

Canvas 3.5
Precision drawing program
Macintosh Classic or larger; hard disk drive.

Canvas is a precision drawing program for illustrators, designers, artists, architects and engineers. Version 3.5 delivers powerful new features, including 3-D extrusions, enveloping, seamless file compatibility with Canvas for Windows, column to column text flow, text style sets and more. Canvas integrates object blending, centerline auto-trace, a Smart Mouse drawing aide, Pantone colors and Open Architecture technology. For professional text handling, Canvas offers fractional leading and kerning, tab support within a text block (left, right, center, decimal), subscripts and superscripts, binding text to any curve or shape, wrapped text around irregular objects, full justification, slant margins, small caps and character-by-character font scaling within text blocks, Type 1 font conversion to Bezier curves and encrusted text within any shape. Graphic design features include the capability to apply effects to, cut or paste multiple points of a Bezier curve, object blending from one shape to another, the capability to edit multiple Bezier curve anchor points simultaneously and EPSF and Illustrator import/export filters. Additional technical illustration features include standard and user-definable hatch patterns, user-definable parallel lines or curves, dynamic object linking (Smart Lines), additional line terminator options, dashed curves and objects, object rotation around any point, a smart drafting assistant, splitting or combining of objects and CGM, DXF and IGES import/export filters. With the program's Open Architecture, new tools, effects and import/export filters can be added at any time with ease. Other features include an integrated CMYK four-color separations utility, an on-screen presentation capability, a search capability for objects and properties and MacDraw I and II (import only), PICT1, PICT2, MacPaint, TIFF import/export filters. Canvas is System 7 savvy and includes support for QuickTime. Version 3.5.2 adds TWAIN compatible scanner support for direct image acquisition and preview capabilities for third-party image browsing software.

Canvas Add-On Tools
Design, imaging and utility tool packs
Macintosh Classic or larger; hard disk drive; Canvas 3.0.6 or later.

The Canvas Design ToolPak features new object effects, including three-dimensional extrusions and object warping (enveloping). Also included are tools for drawing pressure-sensitive Bézier curves on Wacom and CalComp tablets; "Smart Lines," which create dynamic links between objects; a tool for drawing fractal lines; and a Compound Object tool that groups objects into a true single object. (Design ToolPak for Canvas 3.0.6 only.)

The Canvas Imaging ToolPak unleashes the image editing power built into Canvas. Users may create their own filters or use the many interesting filters that are included. Object creation tools include Charcoal, Chalk and Multi-Color Airbrush. This pack also has a Magic Wand auto-selection tool, an easy-to-use masking tool and an Anti-Alias tool for smoothing bit maps.

The Canvas Utility ToolPak gives users the ability to create photorealistic effects with imported Adobe Photoshop filters and Aldus Gallery Effects. Two new text tools bring text flow and style sheets to the program. Canvas users will also get filters to open files that have been saved in Photoshop or GIF formats. The package includes tools that provide professional-quality kerning attributes and faster performance with a new caching option.

ClarisDraw
Drawing application
Macintosh Plus or larger; 2 MB of RAM (4 MB with System 7); hard disk drive; System 6.0.7 or later.

ClarisDraw is the next generation of the MacDraw Pro drawing standard, incorporating more than 75 new features in the areas of versatility, intelligence and precision. ClarisDraw adds full 24-bit color painting, image editing effects, enhanced presentation capabilities, QuickTime video support and enhanced text handling with linked frames, text on a curve, embossing, text wrap and styles. Intelligence is built in to ClarisDraw. For example, SmartAlign automatically aligns and distributes objects and text, and when objects are moved, SmartConnectors keep objects connected with straight or angled connectors. SmartSymbol libraries and 2,400 pieces of clip art provide new drag and drop graphics creation and editing capabilities for substantial increases in productivity. ClarisDraw is compatible with MacDraw II and MacDraw Pro files and data, as well as other industry standard file formats (EPSF, TIFF, PICT, PICT2, CGM, MacPaint, QuickTime Movie). The Claris Graphics Engine (CGE) provides seamless cross-platform (Mac and Windows) transparency across Claris applications and platforms.

Claris Corp.; 5201 Patrick Henry Dr.; PO Box 58168; Santa Clara, CA 95052; 408-727-8227 (customer relations), 800-735-7393 U.S upgrades) or 800-334-3535 (U.S. dealers)

Color It! 2.3
32-bit paint and image processing program
Macintosh Classic II or larger; 2 MB of RAM; hard disk drive; 32-bit QuickDraw; gray-scale or color monitor and 8- or 24-bit video card recommended; System 6.0.5 or later.

Color It! is a full-featured 32-bit color paint program. With Color It!, users can edit images of any kind from line art to direct color. Because Color It! uses a sophisticated virtual image system, users can open and edit multiple files larger than available memory. Multiple undos are provided for greater flexibility and to protect against unwanted mistakes. Like expensive paint programs, Color It! supports anti-aliasing to help remove jagged edges from brush strokes, text and graphic objects. Sharpen, blur and smudge tools are also included to help retouch photographic images. To isolate portions of an image, Color It! supports advanced masking with variable levels of transparency. Other features include basic image filtering, scanner support and special effects. Color It! is System 7 savvy.

Color MacCheese
32-bit paint program
Macintosh Plus or larger; System 6.0.5 or later; 1 MB (B & W); 2 MB (color).

Color MacCheese is the one paint program every Mac user should have. Experienced users love MacCheese's speed and elegance. New users love MacCheese's simplicity. Everybody loves MacCheese's cool gimmicks, like instant sunsets and fractal trees. It has all the normal stuff users would expect to find in a paint program: circles, squares, gradients, filters and so on. But it's the special stuff that makes it fun. Users can use a paint roller or rake, stretch text or add texture with the Transmogrifier. It's great for everything from editing photos to making any picture imaginable.

DAfx 1.33
Paint desk accessory
Macintosh 512KE or larger; 1 MB of RAM and hard disk drive recommended.

DAfx is a bit-mapped painting program that works as a desk accessory. When activated, the program replaces the entire menu bar, revealing its host of features. A few of the special tool capabilities include a spray paint can with adjustable spray nozzle and airbrush option; the text tool, which allows users to enter text and change the pattern of the text itself, the text background and the text outline; and object tools, which can draw constrained, multiple and/or centered objects. Other features include: graphic conversion capabilities; grids (for both horizontal and/or vertical movement); undo; picture recovery (in the event of a system failure); preferences dialog (open to, undo and other options); turbo grabber; full font/style/size control of text; 90 degree rotations; horizontal/vertical flips; selection scaling; five levels of FatBits; and "Fuzzing." Fuzzing allows users to do such things as edge detection, pattern removal, edge tracing and image enhancement.

Deneba artWorks
Integrated graphics software
Macintosh Plus or larger; 2 MB of RAM; System 6.0.7 or later.

Deneba artWorks is an easy-to-use draw and paint program designed specifically for today's burgeoning consumer software market. It combines the drawing power of Deneba's Canvas with innovative painting and image editing features. It supports 16.7 million colors. Deneba artWorks allows drawing, painting and image editing on any layer, supports unlimited layers and works with popular third-party image enhancement plug-in tools.

DeskPaint & DeskDraw 3.52
Full featured black and white and color paint and draw graphics editors
Macintosh Plus or larger; 1 MB of RAM; System 6.0.5 or later.

DeskPaint & DeskDraw is a complete graphics package that provides users with paint, TIFF and draw editing. DeskPaint creates, loads, edits and saves bit-map graphics, including TIFF, MacPaint and PICT formats. A special feature included with DeskPaint is Auto Trace, a facility for tracing bit-map images (TIFF or MacPaint) to PICT objects. Other features include: air brush, charcoal, duplicate, distort, one and two point perspective, cropping, transparent paint, inverse paint, halftoning effects, printing of posters and billboards, edit patterns, scale selections from one percent to 3,999 percent, paste unscaled (pastes images back at their original size), browse features for looking through folders of clip art or scrapbooks and free rotating bit maps in .2 degree increments.

DeskDraw is similar to MacDraw and creates, loads, edits and saves images consisting of graphics and text objects, bit maps (up to 4,000 dpi) and rotated PostScript text. DeskDraw has normal object-oriented graphics editing capabilities, such as arcs, free rotation of text and graphics, rectangles, polygons, lines, hairlines and freehand objects. Objects may be filled with patterns, colored with any of eight QuickDraw colors, set eight copy modes and set line patterns and widths. DeskPaint & DeskDraw are System 7 compatible.

Easy Color Paint 3.0
256-color painting program
Macintosh Plus or larger; 1 MB of RAM; System 6.0.2 or later.

Easy Color Paint is a full-featured color painting program that provides plenty of power for serious graphics, with an easy interface to attract users of all ages and experience levels. It prints in color to the ImageWriter II, as well as to color QuickDraw printers. It supports pressure input from the Wacom stylus. Features include 21 tools, 256 colors, user-defined patterns, multiple color palettes, color printing, resizable windows, user-defined options, adjustable fonts and brushes, horizontal/vertical flipping, color inversion, a variety of gradient fills, user-defined multi-colored patterns, novel lasso and bucket tools, bit-map rotation, special windows for Apple's 12-inch color monitor and many special features, including blends and "wacky coloring." Preference files include ECP Artist and ECP Junior. The program includes professional artwork created using ECP, online help and an Easy Coloring Book with dozens of black and white pictures to color in. The program reads and writes PICT and MacPaint files, and is compatible with MultiFinder and 32-bit QuickDraw.

Fractal Design Dabbler
Natural-media draw and paint program
Any Macintosh, except Plus, Classic, SE and PowerBook 100; 4 MB of RAM; hard disk drive; color or gray-scale monitor; System 6.0.5 or later.

Fractal Design Dabbler is an easy-to-use natural-media draw and paint application that features an educational approach to computer art. Dabbler features a dramatically simple interface, visual tutorials, 16-bit color for minimal system requirements and a full array of natural-media painting tools. Included with Dabbler is a manual with instructions written in collaboration with the Walter Foster Publishing, the publishers of how-to-draw-and-paint art books.

Fractal Design Painter 3.0
24-bit color, natural-media paint program
Macintosh LC, II, Quadra or Power Macintosh; hard disk drive; 8-bit color (24-bit recommended); color or gray-scale monitor; 32-bit QuickDraw; System 6.0.5 or later; pressure-sensitive stylus recommended.

Fractal Design Painter is a 24-bit color paint program that simulates the tools and textures of natural media. Users can use Painter to create original art or to apply natural effects to artwork, scanned images or frame grabs. Painter offers an endless palette of tools and textures that allows users to express themselves in a wide range of styles. Tools include charcoal, felt pens, chalk, crayons, pencils and many more. With Painter's cloning feature, users can open a scanned image and recreate it as a pencil sketch, watercolor or even a Van Gogh. With Painter, the eye actually sees the striated surface of oil paint, the saturated bleed of felt markers and the nubby richness of charcoal. All photo-designs basics are built in: photo-compositing, including dodge and burn, advanced magic wand selections and color separations. Sporting more than 50 new features, Version 3.0 features a refined user interface, multiple floating selections, multimedia and animation tools, enhanced creative and compositing tools and more.
$499 retail

Fractal Design PainterX2
Expert extension to Fractal Design Painter
Any Macintosh, except Plus, Classic and SE; FPU required for some effects; 4 MB of RAM; hard disk drive; color or gray-scale monitor; 8-bit color (24-bit color recommended); 32-bit QuickDraw; Painter 2.0; System 6.0.5 or later.

Users can combine and orchestrate graphic elements with PainterX2, an expert extension to Fractal Design Painter 2.0. With X2, any number of floating images may be present on a Painter 2.0 document. Users can move, layer, scale, distort and skew them. Users also can save their floating selections in a Portfolio as thumbnails. Their picture is always "alive." PainterX2 gives users the freedom to make up their mind — again and again.

Fractal Design Sketcher
Gray-scale paint and image-editing application
Macintosh Classic, Quadra or PowerBook; 2.5 MB of RAM; hard disk drive; 32-bit QuickDraw; System 6.0.5 or later.

Fractal Design Sketcher brings revolutionary natural-media and imaging technology to gray-scale graphics. Sketcher faithfully duplicates the expressive line of a soft lead pencil on rough sketch paper or the luminous glow of oil paints that have been layered on a fine-weave canvas. As image-editing software, Sketcher offers unparalleled ease of use through its simple interface. Because it works in gray scale, Sketcher keeps memory consumption to a minimum. Because it's a paint application, drawing in Sketcher is easier and more natural than drawing in PostScript-based illustration programs.

Kid Pix
Paint program for kids
Macintosh Plus or larger; System 6.0 or later (sound recording requires the Farallon MacRecorder and System 6.0.7 or later, or a Macintosh IIsi or LC).

Kid Pix is a paint program for kids that combines special effect art tools, outrageous sounds and magic screen transformations. With Kid Pix, parents and kids can create wacky and wonderful works of art by combining an assortment of creative paint tools with zany sound effects. The program features an easy-to-use palette of painting and special effect tools, including a "drippy" paint brush, a collection of magical erasers and a talking alphabet. With Kid Pix, users don't just paint a work of art — they hear it, too. Every brush and tool has its own unique sound effect, from creaks and kerchunks to boings and booms. Users can even record personal greetings, poems, music or sound effects to embellish a creation. The extensive palette of more than 20 Wacky Brushes allows users to create imaginative, highly-textured drawings. Kids can experiment with such tools as Leaky Pen, Echoes and Splatter Paint to create colorful, full-screen images. With Rubber Stamps, kids can choose from more than 100 full-color stamp images, from ice cream cones to frogs. Each Rubber Stamp can be edited, re-colored, flipped, magnified and combined to create outlandish collages. Among a variety of unusual erasers, Kid Pix includes a special Hidden Picture eraser that actually scrubs away at the screen to uncover a library of mysterious images, including animals, insects and other fun surprises.

Kid Pix Companion
Adds new dimension to the multimedia excitement of Kid Pix
Macintosh Plus or larger; 1 to 2 MB of RAM (2 to 4 MB with System 7; 4 MB for QuickTime features); hard disk drive; Kid Pix; System 6.0.7 or later; MacRecorder is optional.

Kid Pix Companion is the latest addition to the Kid Pix line of products. The program adds new dimension to the multimedia excitement of Kid Pix by offering a wide range of activities, such as SlideShow, DrawMe Pictures, ColorMe Pictures, 112 additional Rubber Stamp images, 20 new Hidden Pictures and support for QuickTime. SlideShow is an easy-to-use feature that allows kids to take pictures created in Kid Pix and link them up in any order to produce a fun presentation. Best of all, there are lots of crazy sounds and transitions from which to choose for creating entertaining "moving stories." DrawMe Pictures features humorous, pre-recorded voices that prompt kids to draw imaginative pictures. It includes hundreds of picture descriptions to inspire kids' creativity. ColorMe Pictures enables kids to put their drawing and coloring skills to work. It includes a collection of pre-drawn, black and white images that kids can color on screen or print out and color. QuickTime support has been added to Kid Pix Companion, enabling kids to run QuickTime movies in Kid Pix (on the interactive Kid Pix "Wacky TV") and save a SlideShow as a QuickTime movie.

Koyn Fractal Studio 2.0
Easy-to-use fractal image creation software
Macintosh Plus or larger; 1 MB of RAM; System 6.0.5 or later.

Koyn Fractal Studio is an innovative art tool that allows users to easily create intricate designs on the Macintosh and incorporate them into graphic design projects, ranging from publications to multimedia presentations. Fractals are shapes of infinite detail that have patterns of self-similarity — i.e., a part of a fractal resembles a smaller copy of the whole. Koyn Fractal Studio allows users to create a rich variety of unique images, including abstract geometrical designs and patterns, textures and images resembling natural objects. Koyn Fractal Studio comes with the Fractal Library, a collection of more than 50 premade fractals. The Fractal Library can be used as a source of clip art and as a starting point for a user's own design.

MacPaint 2.0
Free-form illustration
Macintosh 512KE or larger.

MacPaint is a design tool for creating free-form drawings and for manipulating existing images. Its design capabilities enable a user to create any kind of artwork — from advertising to layouts to book illustrations. Key enhancements include: open up to nine resizable documents simultaneously; tool and pattern palettes are located in menus that can be pulled down and relocated anywhere on the screen (tear-off palettes); documents scroll automatically when a drawing or selection tool reaches the edge of a window; "Snapshot" lets users return any portion of a picture to a prior version and can be used with magic eraser; four levels of zooming with editing capabilities at each level; and compatibility with Macintosh II, LC, Portables and AppleShare.

PixelPaint Pro3
Digital image creation, retouching and composition
Color-capable Macintosh; 4 MB of RAM (5 MB or more recommended); hard disk drive; 8-bit video (24-bit recommended); System 7.0 or later.

PixelPaint Pro3 is a complete 32-bit, true color image creation, editing and compositing application. The compact, highly intuitive interface includes an advanced set of tools, including some amazing new brushes and natural effects features. Also new in Pro3 is a set of extremely powerful tools that provide complete control for making selections within artwork. PixelPaint Pro3 allows users to make multiple selections — Pixel•Layers — which remain "live" for ongoing editing and manipulation as their artwork evolves. Other features include: design and save custom gradients with multiple colors and transparency levels; versatile document Clone and Merge functions; proprietary technology allows brushes to achieve unsurpassed visual effects, speed and smoothness of operation; interactive transparency control from 0 to 100 percent for all tools; powerful image processing and color correction features; supports third-party plug-in filters; Wet Paint feature allows editing and relocation of painted shapes, brush strokes and text; all painting tools function interactively, or follow polygonal or Bezier curve paths; anti-aliasing feature; fast, automatic file compression for images saved in PixelPaint Pro3 format; and more.

Studio/1
Black and white paint and graphics program
Macintosh Plus or larger; 1 MB of RAM.

Studio/1 is a black and white version of Studio/8, a comprehensive paint and graphics program. Although the interface and menus are identical to its predecessor, Studio/1 replaces color with pattern and dithering capabilities. Several improvements, such as a new text layer that allows for PostScript-quality text on the laser printer, are included. The main new feature of Studio/1 is the ability to create animations. Studio/1 is a professional-quality graphics tool that actually "paints" animation. The program allows users to AnimPaint a series of screens in the same way they would normally paint a single screen. Users can also create and paint with multiframe Animated Brushes. In this mode, users can create such multiframe animations as a bird in flight. In addition, Studio/1 integrates animation with its Perspective capability in a feature called Move. This feature allows users to define a brush, a distance for it to travel, a rotation and the number of animation frames to draw movements across.

Studio/8 2.0
Color paint program
Macintosh II; 1 MB of RAM; hard disk drive.

Studio/8 is a 256-color paint program. It provides a familiar range of tools along with an additional set of nine tool modifiers to customize the tools in a variety of ways. Accessible from the icon toolbox, these tools let an artist dictate how objects are created, where they are placed and how they are filled. Features include: four levels of magnification; up to eight different airbrushes; dual-mode pencil; color picker selects a specific color from a multiple color image; wide variety of polygons; French and Bezier curves with adjustable anchor points; draft and transparent page to allow protected background painting; two, 16 or 256 colors (or gray scale) on screen at once; choice of Studio/8, Apple or Custom color palette; select and mix colors in Color Mixer to create custom colors; powerful manipulation tools; full text box style editing capabilities; images created on a wide array of output devices, including Tektronix 4693D Color Printer, Mirus 35mm film printer, Matrix 35mm slide imager and LaserWriter; supports TIFF, PICT and PICT 2 files; and more. Features new to Version 2.0 include: color dialog that lets users select colors from the Pantone Matching System to produce artwork in the appropriate colors to match professional printed output; PostScript printing support; and support for the LZW compressed TIFF format.

■ **TurboCAD For Macintosh**
Desktop drawing and drafting
Macintosh Plus or larger; 2 MB of RAM (4 MB for System 7); System 6 or later.

TurboCAD is a full-featured desktop drawing and drafting package that will have users creating professional drawings in minutes. It has an intuitive, consistent interface, floating tool palettes, context-sensitive user prompts, comprehensive manual with examples and easy-to-follow tutorials. TurboCAD is fast and powerful and users will be able to create high-precision drawings with 256 layers; automatic dimensioning; automatic wall joining; work at any scale on any size drawing; calculate distances, areas and perimeters; use Mac fonts and vector fonts; Mac patterns and line patterns; and edit their drawings with ease.

UltraPaint 1.0.5
Combines black and white painting, color painting, gray-scale image processing and object drawing into one program
Macintosh Plus or larger; 1 MB of RAM; two 800K disk drives.

UltraPaint combines black and white painting, color painting, gray-scale image processing and object drawing into one program. For color painting, UltraPaint offers support for 256 colors, blended fills, a multicolor airbrush, masking, customized color palettes, color gradients, a color picker and many special effects. Gray-scale editing features include multiple image combination, contrast and brightness control, powerful selection tools, a water droplet tool, sharpen and blur, charcoal, smear, masking and halftone printing. Black and white editing tools and effects incorporated into the program are a realistic three-pattern airbrush, editable lasso, masking, eight transfer modes and custom brushes. All the standard object-oriented drawing tools are also available, as well as auto-tracing of bit-map images, free-form and Bezier curves, scaling, 600 dpi precision, eight layers, rotation in one degree increments and support for up to 256 colors. UltraPaint reads and saves in MacPaint, PICT1, PICT2, TIFF, Startup Screen and MacDraw I (import only) formats. New tools, effects and import/export filters can be added at anytime.

VideoPaint 1.1c
Color painting and editing program with special effects and three-dimensional capabilities
Macintosh II; 2 MB of RAM.

VideoPaint is a three-dimensional color painting and editing program that incorporates sophisticated special effects and an open architecture. The program's features, on top of the regular features found in most color paint programs, include: more than 40 special effects, including spherization, blur, smudge, diffuse, contour, bezier curves, custom shadings, dithering, fractals, etc.; stencil and mask tools; built-in color separation capabilities; three-dimensional wire-frame creation and rendering, with full control over light sources, shades, etc.; built-in drivers for Apple, Microtek and Sharp scanners; advanced built-in import/export facilities, including the capability to import graphics in MacPaint, PICT, PICT2, PixelPaint, Color TIFF and the compressed LZW format, as well as export EPSF, gray-scale PostScript and PostScript CMYK; 16 graphic "ink" modes (six logic modes and six color modes) allow for graphics effects; 32 selection modes allow precise retouching of selected areas and/or colors; complete distort and rotate functions; RGB, CMYK and HLS custom color management; full palette management and customizing capabilities, including animations; anti-aliasing brush and water-drop tools for easy retouching; and a fully-documented open architecture that allows developers to write new special effects and input and output peripherals easily.

Creative/Image Processing

Adobe Photoshop
Photo design and production tool
Macintosh SE or larger, including Portable.

Adobe Photoshop is a photo design and production tool. It allows users to create original images using advanced painting functions, to retouch and edit photographs and other scanned-in, digitized images, make color corrections and produce four-color separations. It features a wide array of painting and editing tools, including customer tools and brushes for creating original images, special effects, textures and patterns. For precise image selection and editing, users can create 8-bit alpha channels that can be used for masks. Collages and photo montages can be created easily. The program supports a wide range of image types, including gray scale, RGB, HSL and CMYK. Images can be converted from one type to another for specialized editing operations, or to create a variety of special effects. Documents can be saved in a variety of file formats, including TIFF, EPS, Scitex and MacPaint. More than two dozen filters can be used to achieve such effects as blurring and sharpening an image, or creating special effects. Adobe Photoshop gives users tremendous control over the colors displayed in an image. Users can adjust the brightness, contrast, middle grays, hue, saturation and specific color values of pixels in any part of an image. Sophisticated color separation capabilities allow users to produce professional-quality, four-color separations. The program allows controlling undercolor removal, ink-trapping and unsharp masking in a color separation.

■ **AutoMask: Plug-In Filter For Adobe Photoshop**
Automatic mask and merge
Any Macintosh (FPU required 68K) or Power Macintosh; 12 MB of RAM; Adobe Photoshop.

AutoMask is a plug-in filter for Adobe Photoshop that offers users several options: to combine, outline, ghost and resize different pictures in one easy step; to generate automatically a soft mask around subject through a sophisticated density masking function; to work in RGB or CMYK; and accepts Photoshop 2.0, CT Scitex, TIFF or ColorTouch files. AutoMask is an ideal productivity tool for Photoshop users who have to create silhouettes around pictures. Through a unique density technique, AutoMask generates a nice and soft mask, keeping the natural aliasing around the object to be silhouetted or the transparency of the hair, furs or smokes; pick a color or drop the background; preview in real CMYK/RGB or plane by plane; verify the values with an online densitometer; and merge.

AXS PhotoProcessor
Prepares digital image files for efficient browsing, transmission or management
Macintosh with 68020, 68030 or 68040 processor; 8 MB of RAM; System 6.0.5 or later.

AXS PhotoProcessor is an application that prepares digital image files for efficient browsing, transmission or management — automatically and in the background. AXS Processor automatically produces easily-shared, cross-platform packages from an incoming stream of images. Each package, produced from a variety of formats, sources and creator applications, contains a compressed copy of the image, less than one-tenth the size of the original file, a snapshot of the image called a thumbnail and content-specific text information. This compound package can be read, displayed, searched, sorted, navigated, selected, printed and stored on any computer with AXS software. Unless users specify it, the original source file is never touched or altered in any way. In one pass, with no scripting, no keyboard macros, no outside help — no experience necessary — PhotoProcessor erases the barriers to the electronic communication of visual information.

■ **CD-Q Acquire Plug-In**
High-quality Photo CD acquisition, color correction and YCC to CMYK color separation
Any Macintosh (FPU required 68K) or Power Macintosh; 12 MB of RAM; Adobe Photoshop.

CD-Q is an Acquire Plug-In for Adobe Photoshop or any other Plug-In-compatible application. CD-Q is an ideal prepress tool to acquire, retouch and color separate Photo CD pictures. CD-Q is specialized in Kodak Photo CD pictures acquiring and offers direct "on the fly" YCC to CMYK color separation and color correction, built-in cropping, unsharp masking, gray component replacement, black level adjustment, white and black points and color correction in either RGB or CMYK with instant previewing of changes. CD-Q is a One-Step Prepress Photo CD Acquire Plug-In to extract and convert all Photo CD pictures into gray scale, RGB or high-quality ready-to-print CMYK color separations with outstanding results every time.

Charger Suites Volumes 1-5
Imaging acceleration software
Macintosh NuBus.

Charger Suites Vol. 1 is Adobe Charged acceleration software for the DayStar Charger or any Storm DSP-compatible accelerator. Volume 1 enables users to accelerate one or more Chargers to parallel process an image for the fastest overall performance. It delivers unmatched performance in a complete library of filters and application extensions for Adobe Photoshop, Fractal Painter, Adobe Premiere and more. It accelerates all variations of Sharpen, Blur, Skew, Resize and Rotate. It also accelerates Find Edges, Feathering, High Pass, Despeckle, Emboss, Motion Blur, Custom Convolution and Preview Icon generation. Charger Suites includes DayStar's PowerPreview, which allows

users to create high-resolution thumbnails to preview variations of a filter's effect in real time.

Charger Suites Vol. 2 accelerates camera acquire with the Kodak DCS 200 system. It provides exact results at speed gains of up to 300 percent when used with DayStar's Charger or any other Storm DSP-compatible accelerator.

Charger Suites Vol. 3 is a DayStar CMS (Color Management System) upgrade for Charger, Charger Plus and Charger PFS. It allows Charger to accelerate the Kodak Precision Color Management System (KCMS). KCMS currently ships in PageMaker, Photoshop (Photo CD Open) and DayStar's ColorMatch packages.

Charger Suites Vol. 4 is a DayStar CMS (Color Management System) upgrade for Charger QUIC and Image 040. It allows Charger QUIC to accelerate KCMS. Charger QUIC (Quadra Universal Interface Connector) is an imaging accelerator (daughter board) that plugs into DayStar's Quad 040.

ChromaPoint
Improves color photographic output on color PostScript printers
Macintosh Classic II or larger; 2 MB of RAM; hard disk drive; Adobe Photoshop or software that supports Photoshop plug-ins.

ChromaPoint is a Photoshop plug-in that is designed to improve color photographic output on color PostScript printers, such as those available from Hewlett Packard, Tektronix, Seiko and QMS. ChromaPoint creates a proprietary diffusion-tone image that can be included with other elements in any program that accepts color EPS or TIFF files. When output on a color PostScript printer, ChromaPoint images look substantially sharper with greater tonal range than a printer's standard or even so-called "enhanced" output. Printing technologies that benefit from ChromaPoint images include ink jet, thermal wax and phase change ink. Any bit-map image that would normally be screened by the printer's PostScript interpreter can be improved by using ChromaPoint.

Chromassage
Provides Photoshop users with color table manipulation, pallet rotations and color injection into 24-bit space
Macintosh Classic II or larger; 2 MB of RAM; hard disk drive; Adobe Photoshop or any software that supports Photoshop plug-ins.

Chromassage provides Photoshop users with color table manipulation, pallet rotations and color "injection" into 24-bit space. Effects can range from simple colorizations to wild psychedelic art with seemingly endless variety. Chromassage features a "live," interactive preview of the image as it is being modified. Tools include current and modified color pallets, "jog wheel" style sliders and an "injector" that infects the image with a user-definable amount of color. A variety of pallets are available to choose from or users may import the colors from another document. Each step is un-doable within the Chromassage dialog. Chromassage is ideal for use with designs intended for multimedia or artwork destined for spot color output, such as T-shirts and serigraphs using PhotoSpot, Second Glance's spot color separation utility for Photoshop.

■ **ColorExtreme**
Multiple pictures extraction, color correction and separation
Any Macintosh (FPU required 68K) or Power Macintosh; 20 MB of RAM.

ColorExtreme is a desktop stand-alone application that lets users perform multiple pictures extraction, color correction and separation tasks on any file format: RGB, Photo CD or CMYK files. Users can now perform batch color correction and color separation process, cropping, rotation and other filters on up to 100 files, any Kodak Photo CD pictures, RGB scans, etc., and get state-of-the-art CMYK color separations in the output format of their choice (DCS/EPS, TIFF, CT Scitex). ColorExtreme supports plug-ins, allowing users to drive any desktop scanner supporting plug-ins and do RGB to CMYK and transform their RGB scanner to a CMYK scanner. It also enables users to perform color separations out of a scanner on the fly. ColorExtreme also offers the ability to open huge pictures even with very limited RAM memory (20 MB). Users can perform stripping, color correction, sharpening, pixel cloning, cropping and resizing on any pictures, whatever its size.

Colorize
Image processing software
Macintosh LC or larger; 8 MB of RAM recommended; 8-bit color monitor; System 7.0 or later.

Colorize is an image editing software package that efficiently colors line art, clip art and scanned images. It adds spot or process colors to images with automatic trapping. Users create colors using CYMK percentages and output as process or spot color. Clipping paths are not needed, so all unpainted areas allow background to show through. Special tools make colorizing fun and easy, including a keyline tool to apply a keyline in varying pixel sizes; a transfer tool to change the color of a keyline or an interior color; and a despeckle tool to remove noise from the image. Users can save images in EPS, TIFF or Photoshop format. EPS file compression is as little as two percent of comparable CYMK TIFF format. Colorize reads and writes Scitex LW format files.
$399 retail
DS Design; 2440 SW Cary Pkwy., Ste. 210; Cary, NC 27513; 919-319-1770, 800-745-4037 or 919-460-5983 (fax)

■ **ColorQuartet 3.0**
Color separation scanning software
Macintosh II or larger; 8 MB of RAM; 5 MB of free hard disk drive space; System 7.0 or later; 16-bit monitor.

ColorQuartet is scanning and separation software. Users can perform CMYK and unsharp masking on the fly. Separation tables from other color management systems can be imported and used directly in ColorQuartet. Selective color correction facilities are provided in an easy, intuitive interface, using the "LCH" controls for lightness, chroma (saturation) and hue. Available options include: User Guidance System for automated production of consistent, attractive color reproductions; CMS-Link for device-independent IT8 calibration of the ScanView scanner; and Sun SPARC scanning and separation modules for increased processing power.
$1,650 retail
$1,100 retail; RGB-only version

■ **ColorQuartet CMS-Link**
Scanner that provides IT8 calibration
Macintosh II or larger; System 7.0 or later; ColorQuartet 3.0; 16-bit monitor.

CMS-Link is an option for ColorQuartet that provides IT8 calibration for device-independent color. When users scan, CMS-Link automatically transforms each scanned image from the propriety RGB values of the scanner to device-independent CIE coordinates. The resulting image files can be exchanged between different devices and color handling programs and re-transformed for output on any given imagesetter or proofing system, using the stored output device profiles. CMS-Link also lets users import color management technique of several leading suppliers. Output device profiles from EFIColor, Agfa FotoFlow, Adobe Photoshop and Apple ColorSync can be used in ColorQuartet.
$1,650 retail
ScanView, Inc.; 330 Hatch Dr., Ste. A; Foster City, CA 94404; 415-378-6360 or 415-378-6368 (fax)

■ **ColorTouch**
Photo retouching and image assembly
Macintosh with 68030 or 68040 processor, Quadra 700, 900 or 950; 24 MB of RAM; System 7.0 or later; 19- or 21-inch color monitor.

ColorTouch is unique software packed with extraordinary photo retouching and creative image assembly features, including fine silhouetting, impressive density masking, very soft retouching brushes with progressive undos, powerful state-of-the-art color correction, Multi-Selective color correction, exchange CMYK plates, multiple merging options with ghosting and drop shadows — with a high degree of control over the final result. ColorTouch offers users instant access to very large images without limitation (several hundred MB), with uncompromised professional-quality results.

DeBabelizer
Automated graphics processing and translation
Macintosh Plus or larger; hard disk drive; System 6.0.7 or later.

DeBabelizer provides automated graphics processing, manipulation and translation and can be used by anyone who creates and/or uses computer graphics. It complements any paint, drawing or image editing software, adding a new collection of functions that enhance the ability to process computer graphics. DeBabelizer automatically recognizes and writes more than 55 different cross-platform, bit-mapped graphics and animation formats. It can read, translate and write files to any bit depth supported by a specific format. DeBabelizer can process a series of graphics documents and/or frames at once (via a custom list of files or folders or an entire hard disk). When used in combination with its own internal scripting function, graphics can be automatically edited, manipulated and/or translated. Many image processing and palette manipulation functions are included. DeBabelizer uses Photoshop acquires, filters and export plug-ins.

DeBabelizer Lite
Graphics translator
Macintosh Plus or larger; hard disk drive; System 6.0.7 or later.

DeBabelizer Lite automatically recognizes more than 55 different bit-mapped graphics and animation formats. Cross-platform support includes files created by programs on the Macintosh, MS-DOS, Windows, Silicon Graphics, Amiga and other computers and operating systems. Translations can be performed to more than 40 different cross-platform bit-mapped graphics formats. Picture Icons and Picture Previews are created automatically for each image saved. Images can be translated individually or a whole folder of images can be translated at one time. Photoshop (and third party) Acquire, Filter and Export plug-ins are fully supported. DeBabelizer Lite is System 7 compatible and 32-bit clean. It supports drag-and-drop and drag-and-drop of multiple images, AppleScript, System 7 virtual memory and 32-bit mode.

Enhance 2.0
Image analysis and enhancement
Macintosh SE/30 or larger; 2 MB of RAM; hard disk drive; System 6.0.5 or later; 32-bit Color QuickDraw.

Enhance is an image processing application that combines sophisticated paint, filter and retouching tools for manipulating gray-scale images. In addition to 256 gray levels, Enhance supports 1-bit line art and 16 gray scale images. It uses its own proprietary virtual

These Products Available Through Bottom Line Distribution
1-800-347-1923

image system, allowing users to open and edit multiple files larger than available memory. The addition of multiple undos provides users with greater flexibility and protects against unwanted mistakes. All paint tools support four degrees of anti-aliasing to help remove jagged edges from brush strokes, text and graphic objects. Also, new masking features allow selections or other documents to be used to isolate areas with variable levels of transparency. Enhance provides a wide variety of high-speed image filters designed to help improve brightness and contrast levels, sharpen and enhance image features or perform interesting special effects. Enhance is System 7 compatible.

■ **Fastedit For Photoshop 2.5**
Manipulate Photoshop 2.5 images files faster
Macintosh with 68020 processor or larger; 3 MB of RAM; System 6.0.7 or later; hard disk drive.

Fastedit is a plug-in module for use with Adobe Photoshop that allows users to manipulate image files with high speed and productivity. It supports RGB, CMYK, gray-scale and bit-map Photoshop 2.5 file formats. Fastedit gives users the ability to preview, select and open portions of entire Photoshop files. Once editing is complete, the plug-in transparently appends the edited area back into the original Photoshop 2.5 file. It also supports up to 16 alpha channels. Features include a high detail preview image, an indicator showing the size of the edit area in megabytes, user-definable numeric edit area indicators, movable edit area, editable marque and a large preview that measures 2.5 by 3.2 inches.

Fractal Design ColorStudio With Shapes
Color illustration and image assembly
Macintosh LC, II or Quadra; 4 MB of RAM; hard disk drive; 8-bit color video card; 32-bit QuickDraw.

ColorStudio offers professional-quality image assembly. ColorStudio with Shapes merges the power of color imaging and PostScript drawing into a single creative environment. Users can create original images, assemble montages and retouch images. ColorStudio supports the Pantone Matching System. For production artists and pre-press professionals, it supports CMYK and HSV color models. The pre-press capabilities extend to direct handshaking with systems such as Crosfield, Scitex and other devices through 9-track tape drives. For maximum pre-press efficiency, ColorStudio supports a full CMYK mode with access to all plates and image editing in real-time CMYK and the ability to see each plate as a composite on an RGB screen. Reading the densities of the image using the eye dropper tool yields values in the CMYK color palette with an accuracy of 1 percent for imagesetters calibrated to a manufacturer's specifications. Support for Photoshop plug-ins means instant access to all popular scanners and other input/output devices and filters and effects. Output capabilities also include full color PostScript and QuickDraw printers and high-resolution imagesetters. Shapes is a PostScript drawing environment within ColorStudio. With Shapes, users can add type or draw objects right from within ColorStudio; or import any other PostScript graphic, text or illustration. These objects can be merged directly into a user's ColorStudio image with smooth, anti-aliased edges.

■ **GamutCD**
Enhances and restores Photo CD images
Macintosh IIfx, Quadra or Power Macintosh.

GamutCD enhances and restores Photo CD images directly from YCC format. This unique application merges Kodak Photo CD technology with the precision of Candela color transforms to improve any Kodak-scanned Photo CD image. Kodak Photo CD images contain more information than is being used by conventional conversion methods. The images transformed in RGB colors for display on color monitors or used in imaging applications typically have reduced saturation, low shadow detail, overblown highlights or a color cast. GamutCD requires no calibration information of the Photo CD scans and will therefore work with Photo CD images from any source.

Handshake/LW
Reads and writes files in Handshake linework format
Macintosh with 68020 or larger processor; 3 MB of RAM; hard disk drive; System 6.0.7 or later.

Handshake/LW is an Adobe Photoshop plug-in module that will read and write files in Handshake linework format. This plug-in was designed to work in conjunction with products that create or manipulate linework format files, such as Gateway Tools by Scitex Corporation, Ltd., Visionary Interpreter for PostScript by Scitex Corporation, Ltd. and RIPLink by Screaming Technology, Inc., and gives users an economical method to edit, change color areas, trap and utilize all features available for manipulating images in Photoshop. In addition, all file formats that are supported by Photoshop can be opened from and saved to Handshake linework format.

Total Integration, Inc.; 334 E. Colfax St., Ste. A-1; Palatine, IL 60067; 708-776-2377 or 708-776-2378 (fax)

Image Assistant
High-performance color image-editing software
Macintosh II or larger; 5 MB of RAM; System 6.0.7 or later.

Image Assistant is professional-quality color image-editing software. Its automatic tools and "Assist Mode" remove the complexity of current imaging products, while an unsurpassed feature set includes capabilities normally found only with add-on programs. Assist Mode lets users choose just the right effects for an image by looking at sample thumbnails on screen. A user makes all the basic color-editing decisions with their eye rather than with their knowledge of percentages, ratios, etc. Sharpening, color levels and special effects, such as embossing and negating, are all available choices. Multiple levels of undo and redo are also available. The Professional Mode allows users to edit in bi-level, gray scale, RGB or CYMK. It includes shrink-to-fit and magic wand tools, as well as support for pressure-sensitive stylus pads. Users can convert images between color, gray-scale and bi-level tones and access the Pantone color matching system. Automatic Scanning Controls separate graphics from text; crop and rotate photos; remove moiré patterns; and determine whether an image is line art, gray scale or color. Print Sampler prints out a sample of how an image will look with up to nine different settings. Users choose the desired look from the thumbnails in the sampler, and then print one final copy.

Iris/CT
Acquires and exports Iris CMYK FEP image files
Macintosh with 68020 or larger processor; 3 MB of RAM; hard disk drive; System 6.0.7 or later.

Iris/CT is an Adobe Photoshop plug-in module that acquires and exports Iris CMYK FEP (Front End Processor) image files. By adding a PC Ethernet card or removable media drive to the FEP, any Photoshop user can prepare and download files to an Iris FEP for output as an ink jet proof. Also, files that are downloaded can be acquired back into Photoshop for further manipulation, reducing the amount of reprocessing and transfer time from the prepress, PC and Macintosh environment. All file formats supported by Adobe Photoshop can be opened from and saved to Iris FEP image format.

JAG II — Jaggies Are Gone
Smoothes digital images and animations
Any color-capable Macintosh; 4 MB of RAM; hard disk drive; 8- or 24-bit video board recommended; System 6.0.5 or later.

JAG II is a graphics utility that automatically smoothes the jagged edges in digital images. Used in post production, JAG offers creative professionals the ability to improve the quality of images created in paint, photo-retouching and animation or multimedia applications with sophisticated edge detection technology that sharpens and clears the image.

Kai's Power Tools 2.0
Generators and filter plug-ins for programs that use plug-in technology
Macintosh Plus or larger; Adobe Photoshop, Fractal Design Painter, Pixel Paint Professional or other plug-in compatible software.

Kai's Power Tools is a set of 33 powerful extensions and filters plug-ins for Adobe Photoshop, Fractal Design Painter and other programs that use plug-in technology. KPT significantly expands the ability to create computer-generated artwork and manipulate scanned images. The filter set features the Gradient Designer, Texture Explorer, Fractal Explorer and Gradients on a Path. Other filters include fractal generators, spherizing, intensity sharpening, hue protected noises and color cycling. Hundreds of editable presets make Kai's Power Tools easy to use. Now version 2.0 provides a quantum leap in speed and capabilities. KPT 2.0 includes an advanced color picker, real-time previews, image extraction preview, keypad control, up to 10 times the performance, more apply modes, new transparency controls and more.

Kodak Colorsqueeze v2.0
Image compression software
Macintosh II family; System 6.03 or later.

Kodak Colorsqueeze is image compression software that reduces the cost of storing and transmitting large Macintosh color image files. File are compressed by up to 50 times or more (depending on the amount of detail in the image). The software compresses 24-bit TIFF and PICT files and reconstructs them to their original size when needed. The restored file can be saved in one of the two supported formats, or copied to the Scrapbook or Clipboard. The Kodak Image Compression files include a "thumbnail" representation of the image that can be quickly viewed on the monitor. Users may preview a series of images before selecting one to uncompress. Colorsqueeze also supports QuickTime compression.

Kodak Photo CD Access Plus Software
Lets users use Photo CD images in desktop computer applications
Macintosh II or larger; 4 MB of RAM (8 MB preferred); 4+ MB of hard drive free space (30 MB of disk space for loading full-resolution Photo CD images); QuickDraw; System 6.0.5 or later; CD-ROM XA Mode 2, Form 1 drive to access free Photo CD sampler.

Kodak Photo CD Access Software lets users use Photo CD images in desktop computer applications. The package lets users browse, cut and paste, rotate, crop and export to standard file formats. Features include: view Photo CD images in any of six different resolutions — from thumbnail resolution to preview images to full-detail resolution for photographic-quality printing and enlargement; select and display multiple images; rotate and flip images; export images to a variety of formats; copy, cut and paste images to other applications; choose from color, gray-scale and bitonal applications; view and crop low-resolution images, then export high-resolution images with all changes intact; and work in one color specification, then export to another. It also includes Photo CD Player Software which allows users to playback Kodak PhotoCD Portfolio discs, the new multimedia format that merges Photo CD images with text, graphics and sound.

Kodak Photo CD Acquire Module
Enables users to import Photo CD images from Photo CD discs into Photoshop software
Macintosh II or larger; System 6.0.5 or later.

The Kodak Photo CD Acquire Module is a plug-in application designed for use in the Adobe Photoshop program. It enables users to import Photo CD images from Photo CD discs into Photoshop software. With the Photo CD Acquire Module, users can select one of the six Photo CD resolutions, crop the image and adjust brightness, saturation and color balance before loading the image into Photoshop software. The Module provides 21 different conversion metrics for importing the Photo YCC color information. The 21 include a gray-scale conversion, a video RGB conversion and nine "monitor metrics." The monitor metrics are defined by the white point and gamma of the monitors. For color professionals, the ability to select a transform that allows them to tune the image to their monitor is an important step in the color reproduction. The documentation provides users with a list of the most popular computer color monitors and their nominal white point and gamma values to help begin the import process. The Module is easy to install. Once installed, it appears in Photoshop's Acquire submenu, which is accessed via the File menu, just like standard Adobe Photoshop acquire modules.

Kodak PhotoEdge Photo CD Software
Lets users access, adjust and enhance high-resolution Photo CD images
Macintosh II or larger; 4 MB of RAM (8 MB preferred); 1 MB of disk space (30 MB of disk space for loading full-resolution Photo CD images); System 6.0.7 or later; CD-ROM XA Mode 2, Form 1 drive to access free Photo CD sampler.

Kodak PhotoEdge Software lets users access, adjust and enhance high-resolution Photo CD images and digital images in other formats. It also lets users copy or export finished images to other desktop publishing applications. Features include: access Photo CD images in any of five different resolutions — from thumbnail resolution for selecting and previewing images to full-detail resolution for photographic-quality resolution printing and enlargement; select from six screen languages (English, French, German, Spanish, Italian and Dutch); display Photo CD contact sheets; convert to 4-, 8- or 24-bit, gray scale, color or bitonal; correct focus and exposure; adjust brightness, contrast and color balance; sharpen or soften photos; zoom, crop, rotate, flip, mirror and change perspective; resize or rescale images; and print, copy or save images to other formats.

Lightning Effects 2.5
Image processing functions within Adobe Photoshop 2.5 accelerated by DSP hardware; full CMYK and image editing possible in real time
Macintosh Plus or larger.

Lightning Effects 2.5 is Adobe Charged, fully compliant with Adobe Photoshop 2.5. The product uses a DSP accelerator to provide up to 20 times performance improvement. All DSP acceleration is available from within the standard Photoshop menus structure. There are no new commands or menus. Lightning Effects supports Apple Real-Time Architecture.

■ **Paint Alchemy**
Adobe Photoshop plug-in
Any color Macintosh; System 6.0.5 or later; Adobe Photoshop 2.0.1 or later (or compatible program accepting plug-in standard).

Paint Alchemy is a standard Adobe Photoshop plug-in that is known for the dramatic, painterly image-processing effects that can be created by applying an infinite variety of filter styles to images. The product ships with 75 pre-set styles, such as Pastel, Ripple, Vortex, Bubbles and Threads, all of which can be customized by varying attributes, such as color, size, angle, transparency and brush shape. The possibilities expand with Paint Alchemy's 36 powerful brushes, which affect images with strokes of various sizes and shapes.

PhotoFlash
Fast, easy way to add photos to documents
Macintosh with 68020 processor or larger; 8 MB of RAM (3.5 MB of application RAM); System 7.0 or later.

PhotoFlash simplifies the process of getting photos into documents. It is designed to help users of page layout and presentation software quickly and easily access, enhance and place photos in documents. PhotoFlash has three key components: an integrated browser that simplifies selection of images, unique photo preparation tools that enhance images and scripting capabilities that place images into popular page-layout applications and automate routine tasks. PhotoFlash is optimized to manage digital images. It also comes with integrated image compression technology and a unique selective compression feature that allows users to compress different areas of a photo at different levels. PhotoFlash accepts Adobe Photoshop plug-in modules for special effects, as well as import and export capabilities. It supports a wide variety of file formats, including PICT, TIFF, JPEG, Photo CD, Photoshop, EPS and DCS, and can work with RGB, CMYK or gray-scale images. In addition to optimized file access routines for other formats, PhotoFlash incorporates accelerated Photo CD routines to speed image access. A sampler of color photos is also provided.

PhotoFusion
Photo compositing software
Macintosh II or larger; 12 MB of RAM allocated to Photoshop; color monitor; Photoshop 2.0 or later; System 7.0 or later.

PhotoFusion is an Adobe Photoshop plug-in Acquire module for doing naturalistic bluescreen image compositing. PhotoFusion achieves results that surpass what can be done with the conventional tools available in Photoshop or other imaging software. Automatic functions allow users to quickly and accurately composite foreground images that contain such things as fine detail, smoke, reflections, transparent objects, shadows and soft edges. PhotoFusion automatically generates a linear mask, which maintains all the foreground detail.

PhotoMatic
Batch processing software for Adobe Photoshop
Macintosh with 4 MB of RAM; AppleScript; Photoshop 2.5.1 or later; System 7.0 or later.

With PhotoMatic, users can now automate and batch process virtually any function within Adobe Photoshop. There is no need to go through the same repetitive steps, file after file, for functions that are applied equally throughout many images. PhotoMatic saves users time and money by automating repeated tasks. PhotoMatic places a "Record" menu in Photoshop, which records virtually all functions in Photoshop, like Unsharp Mask, Mode change, color correction and most special effects, in a "watch me" mode. This PhotoMatic plug-in mode saves all keystrokes and mouse clicks users perform in an AppleScript-compatible file. An advanced user can edit

These Products Available Through Bottom Line Distribution
1-800-347-1923

these scripts, but no knowledge of scripting is required to get its full benefit. The script is then applied to one image at a time within Photoshop, or a batch of images remotely over the network using PhotoMatic's batch processing software. It gives users the ability to walk away and have all their files processing and waiting for them on the desktop.

■ Photoshop Special Effects How-To
Photoshop problem solver
Macintosh II or larger; Adobe Photoshop.

Users can learn to exploit Adobe Photoshop's potential for graphic and photo manipulation by using channels and filters, creating textures using gradient-based compositing techniques, getting impressionistic art effects and more. With this book and enclosed disk containing custom filters, a special effects "cheat sheet" and more, users will learn hundreds of techniques to create state-of-the-art effects on the Macintosh, as well as how to apply that knowledge to create their own special effects.

The PhotoSpot System
Photoshop plug-in modules that produce spot color separations from 24-bit images
Macintosh Classic II or larger; 2 MB of RAM; hard disk drive; Adobe Photoshop or any software that supports Photoshop plug-ins.

PhotoSpot Software System is used to produce spot color separations from Adobe Photoshop. PhotoSpot creates separate black and white TIFF Photoshop files for each color encountered. Users may optionally choose to generate a separation for white inks or flash screens (used to provide an undercolor print for the entire image). Trapping and dot gain controls are integrated directly into PhotoSpot dialog. The resultant separations can be printed directly from Photoshop or imported into programs such as QuarkXpress, Adlus FreeHand or PageMaker, where colors can be applied to match other elements in the layout. To prepare images for spot-color separation, the PhotoSpot package contains various methods of color reduction: Acetone — which provides a very rapid method of color reduction by automatically remapping the tones in the images to a set of user-specified colors for separation; PaintThinner — that prepares the image by presenting a color preview and reduced palette of the colors contained in the document; and Turpentine — which creates eight color (cyan, magenta, yellow, black, white, red, green and blue) continuous tone images based on a "diffusion imaging model."

PicturePress 2.5
Image handling tools
Macintosh II; 32-bit QuickDraw; 2.5 MB of RAM; System 6.0.7 or later (System 7 required for scripting capabilities).

PicturePress software is a complete set of image handling tools for color imaging professionals, making it faster and easier to work with digital images. It incorporates Storm Technology's JPEG compression technology and enables users to substantially reduce the amount of disk space required to store images, while still maintaining the visual integrity of the image. With PicturePress, users can save from two to 100 times more images on a hard disk. Because compressed files transmit much faster over networks and modems, PicturePress users will also realize substantial savings of both time and money. PicturePress even creates thumbnails and lets users save caption text with images, simplifying management and retrieval of files. PicturePress software includes: a stand-alone, Apple Events-aware application; an Adobe Photoshop plug-in; Frontier Runtime and customizable scripts for batch compression and file conversion; a freeware decompression utility to transmit along with compressed images; QuickTime 1.6; and a system extension to accelerate JPEG operations within QuickTime. PicturePress compression and decompression time will automatically be accelerated two to eight times by a Storm Technology-compatible accelerator card.

Planet Color
Image compression
Macintosh LC or larger; 4 MB of RAM; System 7.0 or later.

Planet Color is the latest implementation of the revolutionary Fast Eddie compression process, which converts single images, image series and animation from 24 bit to 8 bit (or less) with no loss of image quality, reducing file size by two-thirds. Users can save enormous amounts of precious disk space with this extraordinary new process — without compromising image quality and with no decompression. Planet Color includes palette manipulation tools and full automatic batch processing. It uses virtual memory (disk caching) and reads and writes in standard file formats.

Pointillist
Stereogram creation
Any gray-scale or larger Macintosh; 2 MB of RAM; System 7.0 or later.

Pointillist is the definitive stereogram creation program for the Macintosh. Users can process PICT files into commercial-grade stereograms of any size or resolution; and create images with up to 256 levels of depth, in color, black and white, gray scale or with their own custom shift patterns. Images containing smooth curved surfaces, spherical shapes and graduated depth levels can easily be generated. Users have complete control over every aspect of creation, including shift pattern, image sub-shift, borders and overlays. A complete manual with tutorial, online help, sample source files and completed stereograms take users through the creation process step by step. Pointillist also ships with more than 40 completed stereograms, three animated stereogram and two screen saver modules that work with After Dark.

■ ResoLUT PS
Image processing
Macintosh II or larger; 8 MB of RAM; 24-bit color monitor.

Incorporating Scitex image processing technology, ResoLUT PS is a software and hardware (NuBus card) solution. It offers local and selective color correction, detail enhancement, sharpness and image scaling of digital files captured by digital photography, Photo CD, created in desktop applications or imaged on RGB scanners. Users will benefit from full digital color transformations of RGB, YCC (photo CD images) or Leaf HDR (Leaf Digital Camera Back images) formatted files. ResoLUT PS converts these images into high-quality CMYK or RGB, in varying desktop and Scitex formats, including PICT, TIFF, Scitex PSImage, EPSF and Photoshop. With the emergence of Photo CD, multimedia and other digital input technologies, ResoLUT PS ensures users will achieve and maintain optimum color transformation. A set of lookup tables offers users color transformations (RGB-to-CMYK, RGB-to-RGB, YCC-to-RG, and YCC-to-CMYK — ideal for PhotoCD processing) to suit a variety of input and output requirements.

ScanMatch 2.0
Scanner color calibration software
Macintosh II family with FPU; 24-bit video card; 4 MB of RAM; hard disk drive; 24-bit color flatbed scanner; System 7.0 or later.

ScanMatch is color calibration software for users of desktop scanners. It helps any color or slide scanner produce the best possible image every time, automatically. ScanMatch color corrects the image displayed on the computer's screen to match the scanned original, making it unnecessary to use manual software color correction tools. Features include: automatically matches screen image to scanned original; runs on any Macintosh II series computer with FPU; compatible with Photoshop plug-in scanner drivers; compatible with ColorSync color management system; reads/writes standard PICT2 and TIFF format files; and scanner calibration can be applied in Photoshop via the ScanMatch plug-in filter. ScanMatch is shipped with a Pantone precision color reference target. Additional targets for calibrating slide scanners are available.

ScanTastic ps
Photoshop plug-in for Apple, Epson, Umax and Hewlett-Packard scanners
Macintosh Classic II or larger; 2 MB of RAM; hard disk drive; Adobe Photoshop or any software that supports Photoshop plug-ins.

ScanTastic ps is a scanning module that provides direct access to image scanners from within Adobe Photoshop. Available versions include support for selected scanners from Apple, Epson, Umax and Hewlett-Packard. ScanTastic ps features a unique Icon Bar that provides a simple method for users to choose a resolution based on output requirements with a single mouse click. Other functions include a "live," zoomable preview, automatic image balance and tone curves — all from Photoshop's "Acquire" menu. Also included with the package are: ScanTastic DA, ScanTastic XT and ScanTastic PM; modules that allow direct access to ScanTastic ps from the Apple menu, QuarkXPress and Aldus PageMaker. ScanTastic ADF supports auto-document feeders, allowing batch scans, and can send the images directly to databases, OCR or other image manipulation software via Apple Events.

■ Scitex ColorFill
Automated linework coloring
Macintosh II or larger; 8 MB of RAM; 160 MB free hard disk space.

Scitex ColorFill is an application dedicated to automating time-consuming linework coloring. Scanned linework is quickly colored with flat tints and radial or linear vignettes at any angle. Users have the option of imaging directly to a high-resolution plotter or a Scitex production system for full document assembly. Scitex ColorFill meets the colored linework needs of comic book or newspaper insert publishers, or the complex coloring requirements of technical designers. ColorFill is also available as a stand-alone software package or as a system.

■ Select: Plug-In Filter For Adobe Photoshop
Plug-in filter to perform color retouching and correction
Any Macintosh (FPU required 68K) or Power Macintosh; 12 MB of RAM; Adobe Photoshop.

Select is a Plug-in filter for Adobe Photoshop or other applications supporting CMYK plug-in filters that lets users perform sophisticated color retouching easily and accurately with exclusive color correction features on CMYK pictures, such as a unique Multi-Selective Color Correction and a CMYK Graduation, with controls similar to those available on high-end drum scanners. Users can easily perform truly selective color changes on up to six specific colors without affecting other color densities and eliminates time-consuming masking. Users adjust the strength of their color correction with the selectivity range, apply a global color correction through a four-curves CMYK graduation for a smooth cast removal and fast color enhancement. Users may apply both color correction features within a selected area whenever necessary. For better control, users can preview instantly their changes on a CMYK calibrated display of the original picture and the corrected version, view channel independently, check densities anywhere with a CMYK densitometer

and save their adjustments for further editing and use on other pictures.

Specular Collage 1.0.1
Object-oriented image composition tool
Macintosh with 68020 or faster processor; 4 MB of RAM; hard disk drive; System 7.0 or later.

Specular Collage is an object-oriented image composition tool for Adobe Photoshop that allows the manipulation of high-resolution images in a fraction of the time it takes using present methods. Collage creates screen-resolution "proxies" of imported PICT, TIFF and Adobe Photoshop 2.5 files that can then be moved, re-sized or skewed. The proxies may also be manipulated with a variety of effects, such as automatic drop shadows and feathering and transfer methods. Collage is a page-layout program for images that defines each image element as a separate object, allowing corrections and adjustments to be made quickly and as often as desired. If the source material contains an alpha channel, Collage can automatically use it as a "live" mask. When a high-quality composite is needed, Collage accesses the original high-resolution image and renders the final image.

Specular International; 479 West St.; Amherst, MA 01002; 413-253-3100, 800-433-7732 or 413-253-0540 (fax)

■ **TEC Compression**
Seamless image compression
Macintosh Plus or larger; System 7.0 or later; 4th Dimension 2.2.3 or later; QuickTime 1.0 or later; hard disk drive recommended.

TEC Compression provides users with seamless image compression for 4th Dimension database applications. Compressing large images saves disk space and increases performance of 4th Dimension applications because less data is read from the disk and therefore less data is transferred over the network (in multiuser applications.) TEC Compression utilizes the image compression algorithms available in QuickTime. The design of TEC Compression allows it to automatically utilize graphics accelerators and image compression cards that support QuickTime. TEC Compression may be implemented via external functions and/or 4th Dimension picture drivers. The picture driver mechanism allows the easiest integration of TEC Compression into existing 4th Dimension databases. TEC Compression will automatically compress and decompress the image.
$49.95 per user retail

■ **Terrazzo**
Tileable textures and patterns
Any color Macintosh; 5 MB of RAM; System 6.0.5 or later; 32-bit QuickDraw 1.2; Adobe Photoshop-compatible application accepting plug-in standard.

Terrazzo is a powerful, interactive Adobe Photoshop plug-in for creating limitless tileable textures and patterns from any source imagery. Terrazzo creates geometrically complex patterns from a choice of 17 symmetries. Because Terrazzo uses the imagery supplied by the users as the source for its patterns, the results are a virtual kaleidoscope of color and pattern in harmony with the original image. The textures and patterns are remarkably beautiful and easy to use in a variety of applications, including background textures for graphic design and multimedia; texture maps or bump maps for 3-D rendering and animation; bold, symmetrical graphic effects; and textile patterns and designs.

ThunderWorks For The Apple Scanner
Image editing software
Macintosh Plus or larger; Apple Scanner; System 6.0.7 or later.

ThunderWorks enables the Apple Scanner to scan in 64 levels of gray — four times more than possible before. It can be used to edit images in 256 levels of gray on all Macintosh models, even on Macs without a gray-scale monitor. Commands for optimizing, equalizing and posterizing and an easy-to-use gray-map editor offer a high degree of image control. Images larger than the 8 by 14-inch scan area can be joined, and image filters may be used together or separately to produce special effects.
$149 retail
Thunderware, Inc.; 21 Orinda Way; Orinda, CA 94563; 510-254-6581, 800-628-0693 or 510-254-3047 (fax)

■ **Torqued!FITServer**
Image processor
Macintosh with 68040 processor; 32 MB of RAM; 24-bit color adapter and color monitor.

The Torqued!FITServer software provides a complete solution for networked image processing in Macintosh workgroups. Three aspects make the Torqued!FITServer a powerful tool: real-time distributed editing, which speeds up the rasterizing of Live Picture files for final output, rasterizing and printing. Features include: open and manipulate large files on the desktop quickly; transmit Macintosh print jobs to a RIP for Silicon Graphics rasterization instantly; rasterize Live Picture print jobs when they arrive at the RIP; avoid high cost of purchasing and maintaining dedicated RIP hardware; upgrade RIP platform easily; print directly to a wide variety of imagesetters, proofers, poster printers and film recorders; and RIP and print PostScript files on Silicon Graphics workstation with additional software.

Creative/Modeling & Rendering

3D Models
DXF library saves time consumed by model creation
Macintosh Centris or Quadra; 20 MB of RAM; System 7.0 or later.

3D Models is a DXF library that is ready to render. 3D Models saves time consumed by model creation. Distributed in the DXF file format, it can be used with many 3-D modeling or rendering software packages such as; MacroModel, RenderMan, 3D Studio, Form-Z and many others that accept the DXF format. Volume 1 categories include: bookcases, chairs, couches, desks, stools, clocks, lamps, picture frames and tables. Different volumes are available. Volumes are designed to provide a range of stylized models. Located in separate files, models can be modified and imported into any scene to be rendered. A custom modeling service is also available.

Acuris ClipModel Libraries
Three-dimensional, computer-generated models
Macintosh Plus or larger.

Acuris ClipModel Libraries are three-dimensional, computer-generated models for use with 3-D modeling software. Each ClipModel is ready to render, highly detailed and divided into groups that are individually selectable for colors, texture and movement. For systems that handle articulations, the hierarchy and pivot points are included. Library 1 — Interior, Multimedia & Presentation includes: interior furniture, computer equipment, multimedia equipment and presentation models. Library 2 — Exteriors includes: trees separated into groups of trunk, branches and leaves, exterior furniture and buildings. Library 3 — Geography includes: round, flat and cylindrical maps of the world, United States and Japan, plus a terrain model of Crater Lake. Library 4 — Human Forms Male and Library 6- Human Forms Female are articulated human figures with layers of clothing and nude; a skeleton and mannequin are also provided. Library 5 — Human Forms Faces includes: eight laser-scanned human heads and faces with bit-mapped images.

Acuris, Inc.; 931 Hamilton; Menlo Park, CA 94025; 415-329-1920, 800-652-2874 or 415-329-1928 (fax)

Alias Sketch!
Freeform three-dimensional illustration and design tool
Macintosh IIci or larger; 8 MB of RAM (20 MB or more recommended); hard disk drive; 32-bit QuickDraw; math coprocessor; System 6.0.7 or later (System 7 recommended).

Alias Sketch! is a freeform three-dimensional illustration and design application. Sketch! provides all the benefits of working in 3D, such as shape creation and manipulation, and the ability to view objects from any perspective. It also automatically calculates real-world lighting, shadows, reflections and textures. Alias Sketch! lets users quickly draw combinations of freeform lines and curves anywhere in 3D space, using a few simple tools, such as the 3D Pencil and the Curve-o-Matic. The Extrude-o-Matic can sweep these lines and curves in any 3D direction, creating fluid, organic shapes. The unique spin Sketch! offers is that any surface, including spheres, extrusions or revolved surfaces, can be used as drawing paper. Its breakthrough 3D perspective workspace and set of natural sketching tools overcomes the technical limitations in existing 2D and 3D software tools. Sketch! is an ideal illustration tool because it works hand-in-hand with popular programs, such as Adobe Illustrator, Aldus FreeHand and Adobe Photoshop. A perspective matching tool lets users match the Sketch! 3D workspace with the perspective of any 2D photograph or bit-map image. This tool provides the ability to sketch directly into an existing photograph with accurate perspective and lighting. Creating a final image for 2D pre-press or DTP applications is easy with Sketch!'s rendering tools. Every quality of rendering is available, from flat shading to photorealistic. Images can be saved as PICT or TIFF, and rendered at high resolution. The Alias Sketch! Idea Catalogs provide visual storage for ideas.

Atlantis Render
Rendering software
Macintosh math coprocessor; 20 MB of RAM; hard disk drive; color graphic card; native mode on Power Macintosh.

Atlantis Render announces a new era in high-end imaging. Its unique technology offers users significant gains in speed, quality, interface design and ease of use. Using a real-time image preview mode, calculating with ray tracing and several other unprecedented ergonomic innovations, Atlantis Render allows for quick and easy creation and modification of realistic renderings and graphic effects: ray tracing, materials, reflection refraction, textures, shaders and shadow casting. Atlantis Render is specifically targeted for graphic artists, product designers, architects, communication and image production firms. It can be used in conjunction with all 3-D modelers or CAD software which save in DXF or RIB format. It also directly compatible with ArchiCAD 4.5 and Zoom.

BackBurner 1.1
Distributed network rendering system
Macintosh SE/30, II or Quadra; 4 MB of RAM; hard disk drive; 12-inch or larger monitor; AppleTalk-compatible network; System 7.0 or later.

BackBurner is a distributed network rendering system for Infini-D. It significantly reduces the time to render complex Infini-D scenes by distributing the work among Macintoshes on a network. It also provides "crash proof" rendering, suspended renderings, easy backgrounding, a convenient batch mode, a friendly interface, easy installation and configuration, the AutoBurner screen saver and RocketShare compatibility.

form•Z And form•Z Power
3-D modeling software
Macintosh with 68881 or 68882 math coprocessor; 4 MB of RAM (8 MB recommended); hard disk drive with 8 MB of free space; 32-bit QuickDraw recommended; System 6.0.4 or later. form•Z Power requires Power Macintosh; 8 MB of RAM (16 MB recommended); hard disk drive with 8 MB of free space.

form•Z is a general purpose solid/surface modeler and 3-D CAD system with an extensive set of 2-D/3-D form manipulating and sculpting capabilities. It is an effective design tool for all fields that deal with the articulation of three-dimensional forms. form•z features a highly interactive graphic interface, associated multiple windows, dynamically-generated 3-D solids and surface objects integrated in a single model, post-pick modes, derivative objects, Boolean operations, terrain models, NURBS and curved surfaces, 3-D form editing and sculpting, 2-D/3-D text (TrueType and PostScript), advanced rounding of edges, vertices and combined edges and vertices, a variety of display options in perspective or axometric views, an integrated drafting module, floating point precision, virtually unlimited layers, DXF, PICT, IGES, EPS, RIB, FACT, 3DGB STL and Illustrator import/export facilities, object rounding, 2-D/3-D symbol instances and libraries, English and metric units, online help, numeric input and more capabilities. It is available in 68K and Power Macintosh native versions.

Infini-D 2.6
Creates photo-realistic computer images and animation
Macintosh II family; 8 MB of RAM; 32-bit QuickDraw/QuickTime; FPU; System 7.0 or later.

Infini-D is a completely integrated modeling, rendering and animation package. Features include: anti-aliasing; shadows; full 32-bit QuickDraw support; fractal, noise and three-dimensional texture mapping; bumped and rippled surfaces; every conceivable shading mode from a flat shade to a raytrace; multiple cameras; infinite white or colored light sources; predefined surface libraries; extended generic primitives; and more. Because of a unique visual animation sequencer, users can animate anything imaginable, including lights, objects, surfaces and cameras.

MacroModel 1.5
Three-dimensional modeling program
Macintosh II or larger; 8 MB of RAM; hard disk drive; 32-bit QuickDraw; 8-bit color display (24-bit recommended); System 6.0.7 or later.

MacroModel is a three-dimensional modeling program that combines the CAD-accuracy of spline-based modeling with familiar two-dimensional drawing tools. Users start with two-dimensional objects and extrude, lathe, sweep or skin them into three-dimensional objects. The program provides real-time visualization from any angle for instant, intuitive feedback. System 7 and 32-bit color are supported. MacroModel imports and exports polygon-based objects for compatibility with other modelers, such as Swivel 3D. It supports DXF for CAD compatibility and PICT for DTP. Photorealistic rendering and three-dimensional animation can be added with Macromedia Three-D. Users can render still images with Pixar MacRenderMan. Images can be exported into Authorware Professional applications or Macromedia Director productions. Features new to Version 1.5 are the twist, bend, toper and non-uniform scale tools, cross-section tool, EPSF import and a new tutorial video.

ModelPro 3.0
Three-dimensional spline-based modeler
Macintosh II or Quadra or Power Macintosh; 5 MB of RAM; math coprocessor.

ModelPro is a highly interactive, three-dimensional spline-based modeler. Featuring VIDI's "Digital Clay" interface and Boeleon cut, join and intersect 32-bit QuickDraw; it provides a versatile, responsive and productive 3D modeling environment. ModelPro can import DXF, PICT, PostScript, EPS, Super 3D, VersaCAD, Electric Image FACT and, optionally, IGES. It can export DXF, RenderMan RIB, Super 3D, VersaCAD, Electric Image and Wavefront. It also includes a module that allows StrataVision 3D to import ModelerPro files directly.

ModelShop II
Three-dimensional spatial design and presentation software
Macintosh Plus or larger; 2 MB of RAM (4 MB of RAM for color); 32-bit QuickDraw for color; System 6.0.5 or later.

ModelShop II is three-dimensional spatial modeling software. It is easy to use, and offers design and presentation features. Features include: mouse-controlled, animated walk-throughs and fly-bys; Claris CAD and DXF in and out; unlimited light sources with variable color and brightness; shadows cast according to sun position; 24-bit rendering; Bezier or curved surfaces; and quick contour terrain modeling.

Pixar Showplace
Make great 3-D RenderMan scenes without modeling
Macintosh II family; floating point coprocessor; 8 MB of RAM; 32-bit QuickDraw color display (24-bit card recommended).

Pixar Showplace is unique Macintosh software that lets users create realistic 3-D scenes without being an expert in modeling or rendering. Users just pick and place pre-designed objects, cover them with any number of wonderful surface appearances, set lights, view the scene from any angle and process a high-impact realistic picture. Showplace contains: MacRenderMan renderer; NetRenderMan, the distributed rendering solution; Amazing Plug-ins (rooms, fractal terrain, venetian blinds); Glimpse, the powerful Looks editor; DXF and Illustrator readers; and new ClipObjects. Showplace will accept image data from any RenderMan-compatible application that outputs RenderMan Interface Bytestream (RIB) files. TIFF and PICT images and PostScript fonts can be imported into Showplace for various uses. Showplace images can be output as TIFF, PICT or EPS files for use with page-layout programs and presentation packages.

Presenter Professional 3.0
Three-dimensional illustration, rendering and animation
Macintosh II, Quadra or Power Macintosh; 5 MB of RAM (8 MB recommended); System 6.04 or later 32-bit QuickDraw.

Presenter Professional is a complete and versatile three-dimensional multimedia solution that gives users three-dimensional illustration, rendering and animation in one integrated package. It introduces "Digital Clay" sculpting, anti-aliasing, smooth shading, dynamic key framing, texture mapping and three-dimensional titling and logos; and provides support for ray tracing, shadows, freeform three-dimensional design, Pixar RenderMan and RISC processors. Presenter Professional can be used to create impressive full-color images and dynamic animations. These can be presented on screen or paper, or as 35mm slides, overhead displays or video presentations. Presenter Professional can also be used to add a professional touch to images modeled in other two- and three-dimensional packages. Formats supported include DXF, PICT, PostScript, RenderMan RIB, Super 3D, VersaCAD, MacDraw, SuperPaint, MacBravo! IGES, StrataVision, ElectricImage and Wavefront.

Ray Dream Designer 3.0
Three-dimensional illustration
Any color-capable Macintosh; 12 MB of RAM; hard disk drive; 8- or 24-bit video board recommended; 32-bit QuickDraw 1.2 or later; System 6.0.7 or later.

Ray Dream Designer is a three-dimensional illustration tool for color publishing. Using drawing tools familiar to users of Aldus FreeHand and Adobe Illustrator, dimensional objects can be designed quickly. Ray Dream Designer automatically handles the complex details of building color 3-D illustrations — perspectives, subtle shadows, lighting effects, textures and reflections. Ray Dream Designer has been designed with an open architecture for future product expansion with animation, special effects and modeling extensions by Ray Dream and third parties.

■ **Ray Tracing For The Macintosh CD**
Explore ray tracing
Macintosh with 68020 CPU or larger; 4 MB of RAM; System 6.0 or later; 5 MB of free hard disk space; CD-ROM (optional).

Ray Tracing for the Macintosh CD teaches the average Macintosh user how to create both photorealistic and surrealistic images with ray tracing. This book/CD-ROM package provides enough tools to keep users turning out beautiful 3-D pictures, including animations. The enclosed disk contains POV-Ray. The CD-ROM contains an interactive reference that lets users look up any POV-Ray command and immediately see how it looks in a QuickTime movie. Power users will appreciate the full Macintosh POV-Ray 2.0 source code and compiling instructions.

RB2Swivel
Three-dimensional modeler and renderer
Macintosh with 68020 or larger processor (Quadra or Centris); math coprocessor; 8 MB of RAM.

RB2Swivel, a special version of Swivel 3D, used by VPL Virtual Reality systems, is now available in conjunction with Body Electric for use on the Macintosh Centris and Quadra. Special features of RB2Swivel allow the import and export of 3-D scenes to Body Electric. Automatic generations of images from fly-through and movements can be recorded and played back with various drivers available on the market. Swivel 3D was licensed by VPL to Macromedia.

RenderPro 2.5
Increases StrataVision 3D and Studio Pro speed when rendering images or animations
Macintosh II family, LC, SE/30 or larger with FPU; hard disk drive; StrataVision 3D.

RenderPro 2 gives StrataVision 3D users remarkable speed improvements when rendering images or animations. RenderPro 2 quietly resides as a startup application on networked Macintosh computers. When the command "render-using-RenderPro" is made from StrataVision 3D, all available RenderPro 2s are recruited into action, delivering minuteman imaging response.

Rend•X
File converter
Macintosh II family, LC, SE/30 or larger with FPU; 4 MB of RAM; hard disk drive; StrataVision 3D 2.6 or

later; renderer that imports RIB file format; System 6.0.5 or later.

Rend•X was created for people who enjoy the modeling and scene composition of StrataVision 3D, yet want to access the power of Pixar's RenderMan products to create special effects, like motion blur, depth of field, displacement shaders and more. Rend•X gives users the ability to combine StrataVision 3D, RenderMan, Valis and their own custom textures and shaders all in the same image. Rend•X is a file converter. Its sole purpose is to create RIB files. Much like the "Save As..." command in many applications that allow users to save a document or file in a variety of formats, Rend•X saves a StrataVision 3D model as a RIB file that can be imported into RenderMan-supported products. This allows users the ability to use special features and capabilities associated with RenderMan products not currently available in StrataVision 3D.

Sculpt 3D V4.0
Three-dimensional design and visualization software for industrial designers, architects, graphics artists and illustrators
Macintosh II, Performa, Centris, Quadra or PowerPC family; 8 MB of RAM; 40 MB hard disk drive; math coprocessor; 8/16/24/32-bit color display; System 7.0 or later.

Sculpt 3D is a fully-capable 3-D modeler and ray trace renderer. Sculpt 3D is a complete design system that combines vertex, spline, NURBS and Boolean-based surface modeling, materials editing, texture mapping and photorealistic rendering in a single integrated application. It offers unparalleled power, flexibility and control, enabling users to build any model without compromise. And with Sculpt's trimming functions, diabolically complex object intersections are easily performed as simple scoops, fillets and trims. Images can be rendered as wire-framed, flat shaded, Phong shaded or ray traced. Sculpt's incredibly fast ray trace renderer allows users to create razor sharp, fantastically clear images. To achieve this level of realism, Sculpt provides users with the same depth of control as it does in its modeler. Users can apply an unlimited number of custom textures to any surface using the surface shaders built into Sculpt, or by mapping images designed in paint programs or captured with a color scanner. Sculpt 3D runs native on the PowerPC.

Sculptor 4.0
Three-dimensional design and visualization software for industrial engineers, architects, graphics artists and illustrators
Macintosh II, Performa, Centris, Quadra or PowerPC family; 8 MB of RAM; 40 MB hard disk drive; math coprocessor; 8/16/24/32 bit color display; System 7.0 or later.

Sculptor is a full-featured 3-D modeler with vertex, spline, NURBS and Boolean-based editing. It is the only modeler on the Macintosh that will construct absolutely anything, to an arbitrary level of detail and precision. And with Sculpt's trimming functions, diabolically complex object intersections are easily performed as simple scoops, fillets and trims. Sculptor can render images as wireframe, flat shaded or Phong shaded with excellent anti-aliasing. Sculptor is an ideal entry into the world of 3-D modeling. It can be used as a stand-alone modeler or as a front-end modeler for other 3-D systems. Sculptor runs native on PowerPC.

StrataVision 3D 3.1
Three-dimensional modeling, scene composition, rendering and animation
Macintosh II family, LC, SE/30 or larger with FPU, Quadra or Power Macintosh; 5 MB of RAM; hard disk drive; System 7.0 or later.

StrataVision 3D is a computer-aided illustration program that allows users to create photo-realistic, three-dimensional scenes using Apple's 32-bit color QuickDraw. Users can create objects using the program's modeling tools or by importing and editing objects from StrataVision libraries and other three-dimensional formats, including Super 3D, DXF, Swivel 3D and IGES. Two-dimensional objects may be lathed, extruded and swept. Newest features include alpha channel support, improved ray tracing memory, better environment handling and export of EPS format. Users can add unlimited light sources of varying type, color, intensity and direction, or use light sources as image projectors. StrataVision 3D includes ray tracing, Phong, Gouraud and flat-shaded and Ray Painting, rendering in one- to 32-bit color. Rendering options include transparency, refraction, shadows, transparent shadows, reflectivity, anti-aliasing, smooth shading, color halftoning, image mapping, texture mapping and more. The program is also compatible with QuickTime technology, allowing users to read, cut, paste, play, create and save QuickTime movies. The program supports color printers, film recorders or video at full resolution. Images can be saved in PICT or TIFF format. Users can export models as DXF files for import to other software packages.

Swivel 3D Professional 2.0.4
Three-dimensional object design and modeling
Macintosh II or Quadra family; 5 MB of RAM (8 MB recommended); hard disk drive; 8- or 24-bit color display; System 6.0.5 or later.

Swivel 3D Professional is three-dimensional design, modeling and animation software. It is a powerful blend of high-end technology and streamlined interface design. Features include: workstation-level graphics, including super-fast smooth shading, environment mapping and 24-bit color; Paint, Draw, EPSF, DXF and PICS output to popular illustration, CAD and multimedia programs; and unique hierarchical linking and three-dimensional animation. Swivel 3D Professional is System 7 compatible.

TREE
Generates three-dimensional tree models and renders photorealistic trees
Macintosh with FPU; 2 MB of RAM; 640 by 480 pixels or larger color monitor; 8-bit display card; 32-bit QuickDraw; System 6.0.5 or later.

TREE is a 3-D modeling and rendering program that models and renders trees. It implements parametric variation of tree structure, color and geometry of branches and color and geometry of foliage. By adjusting the values of parameters, the user can generate different tree types, infinite variations of the same tree type, trees in different stages of growth and trees in different seasons. Once it is generated, the tree can be exported as a 3-D DXF or PICT file to CAD, rendering, animation and imaging programs. The extensive library of trees contains a wide variety of ready-to-use broadleaves and conifers. The library can be expanded with additional trees custom made by the user. The software has an exquisite user interface and extremely fast rendering engine. TREE supports 3-D DXF and PICT file formats.

VG Shaders And VG Looks
Smart three-dimensional surfaces for RenderMan-compatible products
Macintosh IIfx; 8 MB of RAM; 24-bit display; RenderMan or MacRenderMan; RIB modeler.

VG Shaders and VG Looks are smart three-dimensional surfaces designed to let users achieve true photorealism with Pixar's Typestry for fonts, Showplace for scene layout and other RenderMan-compatible modelers, animation and design products. VG Shaders and VG Looks are not flat texture maps; they are procedural (mathematically-based) descriptions of materials or other phenomenon based on the RenderMan Shading Language. A shader lets users turn a simple shape like a cylinder into a well made out of stones or bricks, each individually carved in 3D.

Prime RIB is a collection of 215 three-dimensional shapes for building objects in Showplace. It also comes bundled with PickTure — Visual File Selector, which when installed with Showplace, can display a pre-rendered miniature image of each Prime RIB object.

ColorMinder is a tool for viewing the colors selected in a shader and editing them seamlessly.

ShaderDetective is a tool for changing shader parameters and previewing the results.

Virtus WalkThrough Pro
Three-dimensional drawing and visualization program; includes real-time texture mapping
Macintosh II or larger; 8 MB of RAM; System 6.0.4 or later.

Virtus WalkThrough Pro is a 3-D rendering and visualization program that allows for real-time texture mapping and the incorporation of QuickTime movies as surface features. Its easy-to-learn interface provides a 2-D window where users design their models and a walk window where objects are instantaneously rendered in 3-D. After a scene has been modeled, users can tour and view it from any perspective by navigating with a mouse. Virtus WalkThroughPro adds life to any multimedia presentation. It is used around the world by movie and theater directors and set designers, architects and other creative professionals.
$395 retail
Virtus Corp.; 117 Edinburgh S, Ste. 204; Cary, NC 27511; 919-467-9700, 800-847-8871 or 919-460-4530 (fax)

Virtus WalkThrough V1.1
Three-dimensional drawing and visualization program
Macintosh Plus or larger; 4 MB of RAM.

Virtus WalkThrough is a three-dimensional drawing and visualization program that lets users walk through their ideas. It provides all the tools, including import and export capabilities, that are needed to create and modify three-dimensional drawings. With its intuitive user interface, Virtus WalkThrough is easy to learn; users often model within minutes of installing the program. Users draw in a two-dimensional window, then instantly see their designs rendered in a 3-D walk window where they can tour their newly created virtual environment in realtime.

Zoom 4.02
3-D design and rendering
Macintosh II; 5 MB of RAM; hard disk drive; math coprocessor; color graphic card; native mode on Power Macintosh.

Zoom is a complete design tool for high-quality product presentation. Its floating-point precision and easy-to-use interface make Zoom a high-end conceptual design and visualization tool for product, industrial and interior designers, as well as architects and graphic artists who need sophisticated and accurate three-dimensional models. Zoom has a complete set of parametric two- and three-dimensional solid and surface design tools, including extrusion, prisms, spheres, lathing, piping, depression/bump, Boolean operators, Gordon, Coons and ruled surfaces, etc. Zoom and Focus have rendering engines simulating true material qualities and can also translate the models in Atlantis Render Software. Zoom and Focus open files in DXF, PICT, Text, Rib and PICS formats and support QuickTime in 8- and 24-bit color modes.

Creative/Music

Ballade For Macintosh
Allows users to record, playback and print out sheet music
Macintosh Classic or larger; 1 MB of RAM; hard disk drive; MIDI interface; MIDI keyboard or sound module; System 6.0.7 or later.
$99.95 retail
Dynaware USA, Inc.; 950 Tower Ln., Ste. 1150; Foster City, CA 94404; 415-349-5700 or 415-349-5879 (fax)

The Best Of MIDI Connection
MIDI sequences
Macintosh Plus or larger; 1.6 MB of RAM; sequencer software; CD-ROM drive.
$49.95 retail; two-disc set
Metatec Corp./Nautilus; 7001 Discovery Blvd.; Dublin, OH 43017; 614-766-3182, 800-637-3472 or 614-761-4110 (fax)

Bogas Instrument Disks
Sound disks
Macintosh 512K or larger; Super Studio Session, SSMU or Jam Session.
$19.95 each retail
Bogas Productions; 751 Laurel St., #213; San Carlos, CA 94070; 415-592-5129 or 415-592-5196 (fax)

Chord Quiz Deluxe
Tests formation of common-practice chords
Macintosh Plus or larger; hard disk drive; HyperCard 1.2.2 or 1.2.5.
$18.75 U.S. retail; $24 Canadian retail; overseas add $1 U.S.
Prof. Paul Rapoport; 7 Cradock Ct.; Ancaster, Ontario, Canada L9G 3Z5; 416-648-2181

ConcertWare
Music composition and arrangement package
Macintosh Plus or larger; 1 MB of RAM; System 7 or later; hard disk drive; MIDI adapter and MIDI instrument recommended.
$159 retail
Jump! Software, Inc.; 800 El Camino Real, Ste. 180; Mt. View, CA 94040; 415-903-2295 or 415-903-2289 (fax)

ConcertWare Pro
Notation and real-time transcription program
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0 or later; MIDI adapter and MIDI instrument recommended.
$339.95 retail
Jump! Software, Inc.; 800 El Camino Real, Ste. 180; Mt. View, CA 94040; 415-903-2295 or 415-903-2289 (fax)

Cubase 2.5
Desktop MIDI recording system
Macintosh Plus or larger; 4 MB of RAM; standard MIDI interface; System 6.0.7 or later.
$495 U.S. retail
Steinberg; 17700 Raymer St., Ste. 1001; Northridge, CA 91325; 818-993-4091 or 818-701-7452 (fax)

Cubase Audio 2.0
MIDI/digital audio recording and editing system
Macintosh IIci; 8 MB of RAM; Digidesign Audiomedia (1, 2, LC), Sound Tools (1, 2) or Pro Tools hardware.
$995 U.S. retail
Steinberg; 17700 Raymer St., Ste. 1001; Northridge, CA 91325; 818-993-4091 or 818-701-7452 (fax)

Cubase Lite
Entry-level MIDI sequencer and score printing program
Macintosh Plus or larger; 2 MB of RAM; MIDI interface; System 6.0.7 or later.
$149 U.S. retail
Steinberg; 17700 Raymer St., Ste. 1001; Northridge, CA 91325; 818-993-4091 or 818-701-7452 (fax)

Deck II 2.1
Digital audio workstation software
Macintosh Centris 660AV, Quadra 840AV or II family with Digidesign Audiomedia, Sound Tools II or Pro Tools.
$399 retail
OSC; 480 Potrero Ave.; San Francisco, CA 94110; 415-252-0460, 800-343-3325 or 415-252-0560 (fax)

Digital Performer 1.4
Combines CD-quality digital audio with MIDI sequencing
Macintosh II or larger; 5 MB of RAM.
$895 retail
Mark of the Unicorn, Inc.; 1280 Massachusetts Ave.; Cambridge, MA 02138; 617-576-2760 or 617-576-3609 (fax)

Disc-To-Disk
CD Audio recording software
Macintosh Plus or larger; 5 MB of RAM; SCSI hard disk drive; CD-ROM drive (Sony CDU-561, Toshiba 3401; Toshiba 4101, NEC3X family or AppleCD 300 family); System 6.0.2 or later.
$199 retail
Optical Media International; 180 Knowles Dr.; Los Gatos, CA 95030; 408-376-3511, 800-347-2664 or 408-376-3519 (fax)

Easy Music Starter Kit
Complete electronic tool kit
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; MIDI instrument; MIDI cables; System 6.0.7 or later.
$299.95 retail
Opcode Systems, Inc.; 3950 Fabian Way, Ste. 100; Palo Alto, CA 94303; 415-856-3333 or 415-856-3332 (fax)

Edit One
Industry standard editor/librarian
Macintosh Plus or larger; 2 MB of RAM; MIDI interface; MIDI device.
$149.95 retail
Opcode Systems, Inc.; 3950 Fabian Way, Ste. 100; Palo Alto, CA 94303; 415-856-3333 or 415-856-3332 (fax)

Encore
MIDI music notation and composing software
Macintosh Plus or larger; hard disk drive; MIDI interface.
$595 retail
Passport Designs, Inc.; 100 Stone Pine Rd.; Half Moon Bay, CA 94019; 415-726-0280 or 415-726-2254 (fax)

EZ Vision
MIDI music software
Macintosh Plus or larger; MIDI interface; MIDI synthesizer.
$99.95 retail
Opcode Systems, Inc.; 3950 Fabian Way, Ste. 100; Palo Alto, CA 94303; 415-856-3333 or 415-856-3332 (fax)

Finale 3.0.1
Music transcription and publishing software; MIDI compatible
Macintosh Plus or larger; hard disk drive; ImageWriter, Laser or PostScript printer.
$749 retail
$249 retail; academic
Coda Music Technology; 6210 Bury Dr.; Eden Prairie, MN 55346; 612-937-9611, 800-843-2066 or 612-937-9760 (fax)

Galaxy Plus Editors
Universal librarian with integrated editors
Macintosh Plus or larger; 4 MB of RAM; MIDI interface; MIDI synthesizer or module.
$399.95 retail
Opcode Systems, Inc.; 3950 Fabian Way, Ste. 100; Palo Alto, CA 94303; 415-856-3333 or 415-856-3332 (fax)

Galaxy — The Universal Librarian
Universal librarian music software
Macintosh Plus or larger; 2 MB of RAM; MIDI interface; MIDI synthesizer or module.
$249.95 retail
Opcode Systems, Inc.; 3950 Fabian Way, Ste. 100; Palo Alto, CA 94303; 415-856-3333 or 415-856-3332 (fax)

Jam Session
Music performance program
Macintosh Plus or larger.

Jam Session allows users to play along with songs made famous by their favorite artists, such as Aerosmith ("Dude [Looks Like a Lady]"), The Police ("Roxanne"), Santana ("Black Magic Woman"), ZZ Top ("Sharp Dressed Man"), Peter Gabriel ("Sledge-hammer"), Elton John ("Crocodile Rock"), The Kinks ("You Really Got Me"), The Cars ("Let's Go"), Garth Brooks ("Rodeo"), Ritchie Valens ("La Bamba"), The Grateful Dead ("Sugar Magnolia") and more. The program provides on-screen animated musicians who play and animate along with the songs. Users become a member of the band by hitting any key on the keyboard and playing riffs and chords that make them sound like they've been playing their whole life. No matter which key a user strikes, they sound great. Five color and five black and white animated scenes are included.
$59.95 retail
Bogas Productions; 751 Laurel St., #213; San Carlos, CA 94070; 415-592-5129 or 415-592-5196 (fax)

Jam Session Classic Songs
Additional animated scenes and 10 songs for use with Jam Session
Macintosh Plus or larger.
$29.95 retail
Bogas Productions; 751 Laurel St., #213; San Carlos, CA 94070; 415-592-5129 or 415-592-5196 (fax)

Jump: The David Bowie Interactive CD-ROM
Interactive music video editing adventure
Macintosh LC III (68030/25 MHz) or larger; 5 MB of RAM; hard disk drive; 640 by 480 by 256 color display; System 7.0 or later; CD-ROM drive (double speed recommended).
$49.95 retail
ION; 11845 W. Olympic Blvd., Ste. 1050; Los Angeles, CA 90064; 310-312-8062 or 310-312-8060 (fax)

Lime
Music notation program
Macintosh Plus or larger; 2 MB of RAM; System 6.0 or later; MIDI optional (MIDI interface, MIDI keyboard, MIDI sound module).
$295 retail
$695 retail; lab packs
$1,400 retail; network license
$2,000 retail; site license
Electronic Courseware Systems, Inc.; 1210 Lancaster Dr.; Champaign, IL 61821; 217-359-7099, 800-832-4965 or 217-359-6578 (fax)

Listen
Interactive ear training
Macintosh Plus or larger.
$99 retail
Imaja; PO Box 6386; Albany, CA 94706; 510-526-4621, 800-294-6252 or 510-559-9571 (fax)

M
Interactive composing and performing environment
Macintosh Plus or larger.
$199 retail
Dr. T's Music Software; 124 Crescent Rd., Ste. 3; Needham, MA 02194; 617-455-1454 or 617-455-1460 (fax)

MacTunes
Music composition, notation
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; HyperCard 2.1.
$39 retail
$195 retail; lab pack
First Wave, Inc.; 9449 N. 90th St., Ste. 213; Scottsdale, AZ 85258; 602-860-4300 or 602-860-2501 (fax)

Master Tracks Pro 5
Professional MIDI sequencing program
Macintosh Plus or larger; Passport MIDI interface card or compatible; one or more MIDI-equipped instruments.
$395 retail
Passport Designs, Inc.; 100 Stone Pine Rd.; Half Moon Bay, CA 94019; 415-726-0280 or 415-726-2254 (fax)

Max
Object-oriented programming environment
Macintosh Plus or larger.
$395 retail
Opcode Systems, Inc.; 3950 Fabian Way, Ste. 100; Palo Alto, CA 94303; 415-856-3333 or 415-856-3332 (fax)

MaxDsp 56K Developers Kit
Enhances and compliments Opcode's Max Environment, MPW and Motorola's DSP56001
Macintosh II.
$300 retail; license agreement required
Office of Technology Licensing; University of California, Berkeley; 2150 Shattuck Ave., Ste. 510; Berkeley, CA 94704; 510-643-7201 or 510-642-4566 (fax)

MiBAC Jazz Improvisation Software
MIDI software for playing and studying jazz
Macintosh Plus or larger; two disk drives; MIDI interface and MIDI synthesizers; System 6.0 or later.
$125 retail
MiBAC Music Software; PO Box 468; Northfield, MN 55057; 507-645-5851 or 507-645-2377 (fax)

MiBAC Music Lessons
Music theory
Macintosh Plus or larger; System 6.0 or later.
$119 retail
MiBAC Music Software; PO Box 468; Northfield, MN 55057; 507-645-5851 or 507-645-2377 (fax)

The Miracle Piano Teaching System
Digital piano
Macintosh Plus or larger; 2 MB of RAM (3 MB for color); hard disk drive; System 6.0.5 or later.
$499.95 retail
The Software Toolworks; 60 Leveroni Ct.; Novato, CA 94949; 415-883-3000, 800-234-3088 or 415-883-3303 (fax)

Mosaic 1.3
Music notation publishing software
Macintosh LC or larger; 2 MB of RAM.
$595 retail
Mark of the Unicorn, Inc.; 1280 Massachusetts Ave.; Cambridge, MA 02138; 617-576-2760 or 617-576-3609 (fax)

Music Mouse — An Intelligent Instrument V2.04
Software musical instrument and MIDI controller
Any Macintosh; MIDI recommended, but not necessary.
$79 retail
Dr. T's Music Software; 124 Crescent Rd., Ste. 3; Needham, MA 02194; 617-455-1454 or 617-455-1460 (fax)

Musical Set Complete 1.0.1
Assists composers who work with musical set-classes while writing post-tonal music
Macintosh 512KE or larger; System 4.1 or later.
$19 retail; specify type of Macintosh and processor type used
$2 retail; demonstration version and complete documentation
Esoteric Software; PO Box 744; Falls Church, VA 22040; 703-532-6981 or 800-217-5051 (orders)

Musicshop
Software music recording studio with notation printing
Macintosh Plus or larger; 2 MB of RAM; MIDI interface; MIDI synthesizer.
$149.95 retail
Opcode Systems, Inc.; 3950 Fabian Way, Ste. 100; Palo Alto, CA 94303; 415-856-3333 or 415-856-3332 (fax)

MusicTime
Desktop music composing and notation software
Macintosh Plus or larger.
$249 retail
Passport Designs, Inc.; 100 Stone Pine Rd.; Half Moon Bay, CA 94019; 415-726-0280 or 415-726-2254 (fax)

Nightingale
Music composition/notation
Macintosh Plus or larger; 3 MB of RAM.
$495 retail
Temporal Acuity Products; 300 120th Ave. NE, Bldg. 1, Ste. 200; Bellevue, WA 98005; 206-462-1007, 800-426-2673 or 206-462-1057 (fax)

On•The•Air
Integrated broadcasting system
Macintosh II, Centris or Quadra; 8 MB of RAM; Digidesign audio interface or Quadra 840AV; System 7.0 or later.
$995 retail; Digidesign version
$595 retail; Sound Manager version
Softron Media Services; Passage Saint-Honoré, 16; 1000 Brussels, Belgium; 32-2-217-76-24 or 32-2-219-19-77 (fax)

OvalTune
Creates audiovisual performances
Macintosh Plus or larger; hard disk drive; System 6.0.2 or later.
$79 retail
Dr. T's Music Software; 124 Crescent Rd., Ste. 3; Needham, MA 02194; 617-455-1454 or 617-455-1460 (fax)

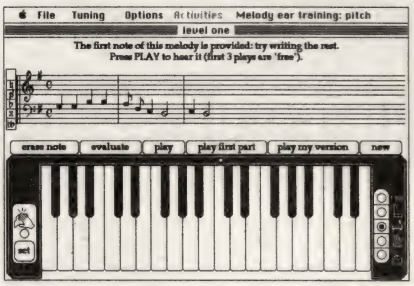
Performer 4.2
MIDI sequencer software
Macintosh Plus or larger; 4 MB of RAM recommended.
$495 retail
Mark of the Unicorn, Inc.; 1280 Massachusetts Ave.; Cambridge, MA 02138; 617-576-2760 or 617-576-3609 (fax)

■ Poor Man's Ear-Training Package 1.0
Scaled-down interval recognition
Macintosh 512K or larger; System 4.1 or later; Deluxe Music Construction Set 1.0.
The Poor Man's Ear-Training Package contains three program modules that create files that can be imported by Deluxe Music Construction Set (DMCS) 1.0 or later. It is during playback mode (using DMCS) that users practice ear training. N_Mel creates mono-rhythmic "melodies" chosen from amongst the intervals users specify. N_Dyads creates a set of mono-rhythmic two-note chords chosen from amongst the intervals users ask to be included in them. Finally, Simuls creates a set of mono-rhythmic chords of up to six notes each, such that the created chords are selected from the set-classes specified by users (set-classes are extremely flexible and allow for a wide variety of traditional and non-traditional chord types). MIDI is strongly recommended. It is Power Macintosh compatible.
$9 retail
Esoteric Software; PO Box 744; Falls Church, VA 22040; 703-532-6981 or 800-217-5051 (orders)

■ Poor Man's Sequencer
Scaled-down MIDI sequencer
Macintosh 512KE or larger; System 4.1 or later; MIDI.
Poor Man's Sequencer can read and play standard MIDI files and create MIDI files based on what is played at the keyboard. A patch program from Esoteric Software makes the Type 1 MIDI files created by it compatible with some other commercial sequencers so that others can listen to the MIDI file performers. It is bundled with Poor Man's System Exclusives.
Free
Esoteric Software; PO Box 744; Falls Church, VA 22040; 703-532-6981 or 800-217-5051 (orders)

■ Poor Man's System Exclusives
Synthesizer utility
Macintosh 512KE or larger; System 4.1 or later; MIDI.
This free application is probably readily available online and allows uploads and downloads of system exclusive data between a Macintosh and a synthesizer or sound sampler. A synthesizer patch or group of patches (not exceeding 128K) can be saved to disk for later use. Downloading to the Macintosh is initiated from a controller or from the front panel of the device itself. A MIDI through option allows a controller to play another device or to initiate a download from another device.
Free
Esoteric Software; PO Box 744; Falls Church, VA 22040; 703-532-6981 or 800-217-5051 (orders)

Practica Musica 2.6
Music fundamentals training with textbook
Macintosh Plus or larger.



Practica Musica is a comprehensive tool for ear training and music theory. Its wide range of activities and varied levels of difficulty make it useful both to beginners and to trained musicians. Practica Musica features active staff notation and high-quality sampled sound using special sound drivers for the Macintosh. It also is fully MIDI capable, for both input and output. Version 2.6 offers additional compatibility with Apple's MIDI Manager. Current activities include pitch reading, scales, interval ear training, interval playing and spelling, chord ear training, chord playing and spelling, melody ear training for pitch, melody ear training for rhythm, full melody ear training and melody writing (for the creation of brief custom ear training melodies). It will generate ear training melodies according to a user's choice of scale, key signature and meter, and will identify chords and intervals played by a user. A number of historical tunings are available; a user can also change instruments, choosing between organ, piano, harpsichord and MIDI. Practica Musica saves scores and will print a progress record at any time. It is System 7 compatible.
$125 retail

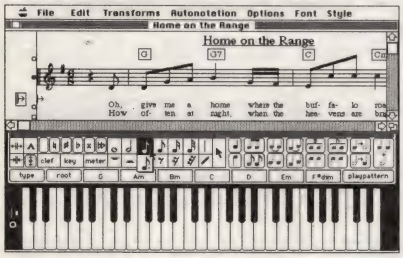
Songworks 1.6
Song composition
Macintosh Plus or larger.



Songworks is a music notation program that can also help users compose. It will automatically notate a melody played on the computer's letter keys or on an external MIDI keyboard, suggest chords to go with the melody, invent melody and harmony ideas to stimulate a user's imagination, transpose, play and print the song together with a user's lyrics. It is easy to use, even for the beginner, and yet provides editing tools sophisticated enough to make it valuable to professionals. Songworks deals with a single staff of melody, in any clef, and can handle multiple changes of clef, key or meter if desired. Chords are drawn from the program's own list or are customized by a user; they are played according to various accompaniment patterns and are printed as chord symbols. Lyrics can automatically be aligned with the notes of the melody. Songworks can be used effectively with the sound of the Macintosh speakers, though it can also communicate with MIDI instruments both for input and output. A laser font is included for printing to the LaserWriter. Songs can also be exported as MIDI or PICT files for use in page-layout or drawing programs.
$125 retail
Ars Nova Software; PO Box 637; Kirkland, WA 98083; 800-445-4866 or 206-828-2132 (fax)

Creative/Special Effects

1000 Of The World's Greatest Sound Effects
1,000 sound effects
Macintosh II or larger; 2.5 MB of RAM; 12-inch or larger color monitor; System 6.0.7 or later; speakers; headphones; CD-ROM drive.
Users get 1,000 sound effects, perfect for any kind of multimedia presentation. These professional sound effects have been used around the world for the past 30 years — in the theatre, as well as in countless movie and television productions. The sounds are all categorized for easy searching. With the Sound Finder, users can quickly find the perfect sound for just the right effect. There's also the Sound Attach utility, to attach sounds to different system events. Also included is a sophisticated "wave editor," which allows users to edit the sound effects, so they can create their own, custom sounds for a customized multimedia presentation.
$49.95 retail
Interactive Publishing Corp.; 300 Airport Executive Park; Spring Valley, NY 10977; 914-426-0400 or 914-426-2606

■ **20+ Scenics Volume 1**
Finder backdrops
Macintosh Plus or larger; System 6.0.4 or later.
Unlike real photographs, these fractal-generated scenic (sea, mountains, sky) backgrounds (with full 24-bit color) are soft and easy on the eyes. They are great for startup screens or for use with the shareware program Decor. Users must specify type of Macintosh, processor type and monitor size (14-inch screens or less are supported; black and white screens are also supported) when ordering.

250 Of The World's Greatest Music Clips
Music clips
Macintosh with 4 MB of RAM; System 6.0.7 or later; CD-ROM drive.
From the blues to power tracks, romantic to rock & roll, 250 of the World's Greatest Music Clips is designed to enhance multimedia presentations. Users can customize presentations with the specialized musical interludes. These 5 to 30 second clips are recorded in both 8-bit and high-fidelity 16-bit formats. Users can get the songs they need, easily categorized, at their fingertips. Included is the Multimedia Sound Studio, a graphical state-of-the-art stereo rack system, perfect for controlling all aspects of a multimedia Mac. Any of the music clips can be customized with the built-in wave editor.

3-D Object Library
Libraries of three-dimensional objects
Macintosh Plus or larger.
Hundreds of three-dimensional objects — called Datasets — are displayed in Viewpoint's free 200-page catalog. Current categories include: Aircraft, Vehicles, Ships, Human Anatomy (including a full skeleton and specific muscle groups), Animals and more. In addition, Viewpoint offers users the option of choosing from available Datasets or ordering custom Datasets to fit various needs. Datasets range in size and detail from 100 to 140,000 polygons and can be output in virtually any software format. Viewpoint can offer users whatever models they need to create quality, cost-effective animations.

Aldus Gallery Effects
Transforms images into art
Macintosh SE/30, LC or II family; 2 MB of RAM; hard disk drive (Texture Art requires CD-ROM drive); color monitor and card; system 6.0.5 or later; 32-bit QuickDraw 1.2.

Aldus Gallery Effects: Classic Art gives graphic designers the power to transform any bit-mapped image, including color and gray-scale scans, into sophisticated art. The volumes include plug-in filters that provide access to the effects directly from within many industry-leading graphics programs. Animation software that accepts plug-in filters can also take advantage of the effects. A stand-alone application is provided with Volume 1. Each volume has an easy-to-use dialog box with adjustable setting controls and preview capability. Users can save up to 25 customized settings by name with each filter. Effects can be applied to unique selection areas or to the entire image. Effects can be overlapped for added creativity. Both 8- and 24-bit formats are supported.

Gallery Effects: Classic Art, Volume 1 provides 16 master effects with thousands of variations. Included are Chalk and Charcoal, Charcoal, Chrome, Craquelure, Dark Strokes, Dry Brush, Emboss, Film Grain, Fresco, Graphic Pen, Mosaic, Poster Edges, Ripple, Smudge Stick, Spatter and Watercolor.

Aldus Gallery Effects: Classic Art, Volume 2 is a library of 16 painterly effects that emphasize bold painting and drawing styles, as well as photographic effects. The effects are Accented Edges, Angled Strokes, Bas Relief, Colored Pencil, Diffuse Glow, Glowing Edges, Grain, Note Paper, Palette Knife, Patchwork, Photocopy, Rough Pastels, Sprayed Strokes, Stamp, Texturizer and Underpainting.

Amazing Moves
Bizarre stunts and feats
Macintosh LC or larger; 8-bit or greater color display; System 6.0.5 or later; CD-ROM drive.

Amazing Moves features the best in bizarre stunts and feats. Users can step right up and marvel at the most amazing collection of thrills, chills and spills ever collected. Gathered from both modern and historic footage from around the world, Amazing Moves boggles the mind with death-defying daredevils, astonishing animal acts and one-of-a-kind oddities. From parachuting dogs to human cannon balls, this CD-ROM has more showstoppers than could fit under any circus big top. Also included are musical solos and duets ideal for any imaginative multimedia presentation.
$59.95 retail
Jasmine Multimedia Publishing; 6746 Valjean Ave., Ste. 100; Van Nuys, CA 91406; 818-780-3344, 800-798-7535 or 818-780-9705 (fax)

America In Motion
Videos of the American dream
Macintosh LC or larger; 8-bit or greater color display; System 6.0.5 or later; CD-ROM drive.

America in Motion features videos of the American dream. Americans have a unique way of celebrating life and this CD-ROM takes users on an electronic journey from the Golden Gate to the White House, from Fourth of July fireworks to Thanksgiving dinner. The spirit of freedom that moves the American heartland is also expressed in dozens of musical selections ranging from ragtime to rock and roll.

Animation Clips
High-quality animations
Macintosh Plus or larger (color requires SE/30 with color adapter or II family and 8-bit color card); 2 to 4 MB of RAM.

Animation Clips Business 1 and Business 2 each contain 30 high-quality, fully-animated "clips" of everyday business objects and metaphors that users may modify with their own images, graphs or text. They are ideal for multimedia and QuickTime presentations. Features include: available as black and white line art or as 8-bit color rendered versions; two- and three-dimensional construction; created using traditional cell animation techniques; small file sizes, optimal throughput; PICS or Macromedia Director file format; and compatibility with popular Macintosh multimedia packages. They are also available in QuickTime file formats.
$99 retail; includes Sound Effects
Media In Motion; PO Box 170130; San Francisco, CA 94117; 415-621-0707 or 415-621-1724 (fax)

AniMedia
Clip animation library
Macintosh LC or larger; 4 MB of RAM; hard disk drive.

AniMedia is a clip animation library that includes more than 100 color and black and white QuickTime animation files. These files may be imported directly into a variety of multimedia authoring software, such as Macromedia Director, Magic, Motion Works PROmotion, Cinemation, Authorware Professional, as well as HyperCard, SuperCard and others. AniMedia features animated characters and business people, business machines in action, waving flags, transportation, spinning titles, industry and business themes and a whole lot more — everything users need to add motion to their presentations. AniMedia will be available on CD-ROM and will also include clips of music sound tracks and sound effects.

The Archives Of History
Compendium of significant images from the 20th Century
Macintosh LC or larger;256-color graphics; 5 MB of RAM; 5 MB of free hard disk space; CD-ROM drive.

The Archives Of History is a moving-image retrospective of the 20th Century. It was a century of World Wars and a century of progress. But first and foremast, it was a century of dramatic motion pictures, more than 250 of which are available as QuickTime movies. A sampling of the QuickTime movies included on this disc are: Adolph Hitler & Benito Mussolini, Amelia Earhardt & Charles Lindbergh, Anti-War Demonstrations, Army-McCarthy Hearings, Attack on Pearl Harbor, Desert Storm, Dionne Quintuplets Born, Elvis Presley Inducted into the Army, Fashion Shows & Flappers, Henry Ford & Thomas Edison, Hindenburg Explosion & Titanic Disaster, Hiroshima, Hula Hoops & Marathon Dancing & Twisting, Jackie Robinson Joins the Brooklyn Dodgers, John Dillinger & Assorted Gangsters, John F. Kennedy, Kamikazes, King Tut's Tomb Excavated, Klan March on Washington, Marilyn Monroe, Muhandas Gandhi, Repeal of Prohibition, Swingin' London & Twiggy, Watergate & Vietnam and World War I & World War II.

Aris Entertainment MediaClips
Media Clips containing images, sound tracks, movies and more
Macintosh LC or larger; 8- or 24-bit color display; 32-bit color QuickDraw; CD-ROM drive; System 7.0 or later.

Tropical Rainforest lets users experience the sights and sounds of the lush tropical rainforests of South America. It includes all aspects of the rainforest — from its wild beauty and breath-taking sights to areas of forest devastation. Wild creatures and beautiful and exotic birds are seen and heard in their natural habitat. Included are 100 natural photographic images, 100 originally composed Andean panflute music clips.

From shipwrecks and hidden caves to deep and uncharted waters, watch plant and animal life come alive. Deep Voyage is an underwater adventure that includes 100 dynamic photographic images, 100 contemporary audio clips and 25 underwater action videos.

Business Backgrounds contains everything from stock certificates, graphs and files to business meetings, office equipment and executive activities. Upbeat music and sound effects are featured.

Full Bloom contains beautiful and exotic flowers from around the world to make fascinating backdrops and graphics for user's monitor or presentation. With classical piano audio clips, this disc is wonderfully relaxing and enjoyable. It also includes stunning videos of flowers opening. Images, videos and sound can be used royalty-free.

Island Designs includes two discs, Vintage Aloha and Batik Designs. Vintage Aloha contains playful and rare "antique" Hawaiian shirt patterns from the 1930's through the 1950's, teamed with 100 sound tracks of the best early Hawaiian music. Batik Designs showcases alluring and richly colored fabric designs from exotic Bali, combined with 50 sound tracks of enchanting Balinese music and ambient sounds.

Jets & Props is a two-disc set that contains a total of 200 spectacular photos of civilian and military aircraft: 100 jets and 100 classic props. It also contains a total of 200 original audio clips: 100 hard-driving rock-and-roll (Jets) and 100 instrumentals with an international flavor (Props). Short, informative descriptions and 50 videos of jets and props in action are provided — a private air show on two discs.

Majestic Places contains 100 photographs from many of the world's most spectacular vistas, including Mt. Everest, Mt. McKinley and many other famous landscapes. Originally scored contemporary music complements each image to create a breathtaking slide show to enjoy time and again.

Money, Money, Money! contains images of U.S. and international coins and currency, along with 25 videos of money hot-off-the-press. Whether users need some dinero, geld or greenbacks, they'll find it all in Money, Money, Money! It also features 100 originally scored audio tracks and sound effects that can be used royalty-free.

Wild Places contains award-winning natural landscapes and closeups featuring deserts, rocks, jungles, seascapes and forests, paired with originally scored "new age" audio tracks. Images and sounds may be used without royalty in print or digital publications or presentations.

World View contains stunning images of the world from above, planets and space exploration from the best of NASA's archives. Each photo has an interesting and educational description. Users can see 25 exciting movies of lunar landings, blastoffs and more. One hundred new age piano and instrumental music tracks will delight explorers of all ages.

With Americana, users take a photographic journey with Roger Goldingay through windswept prairies and majestic mountains, quaint churches and covered bridges. It is a visually stunning chronicle of famous places users would love to visit.

Animal Kingdom features the best of the world's animals from nearly all continents, combined with originally composed new age instrumental music and motion video sequences. With lions, bears, tigers, penguins, birds and many other kinds of wildlife, Animal Kingdom is a disc the whole family will enjoy.

Atmospheres Background Systems
Full-page image backgrounds, plus special effects software
Macintosh Plus or larger; hard disk drive with 1 MB free; SuperDrive; System 6.0.7 or later.

Atmospheres Background Systems are full-page color and gray-tone background images, plus Watermark, a special effects software tool. Five collections of unique images enhance any project created with page layout, presentation, paint, word processing and draw programs. Backgrounds are in high resolution to provide professional-looking output with laser printers, imagesetters, four-color printing, 35mm slides, transparencies, on-screen and on desktop color printers. Watermark for Atmospheres, a special effects and graphic format conversion utility, is an added benefit included in each Atmospheres System. The original vector artwork is editable in all draw programs, including Illustrator, FreeHand, SuperPaint and MacDraw Pro. Users can convert images to bit maps for compatibility with all Macintosh paint programs. The special effects features in Watermark include changing image color intensity, known as ghosting, to allow text placement over the background artwork. Gray-tone image controls allow ghosting and gray balance fine tuning to improve output for an end-user or service bureau's specific laser printer or imagesetter. The five collections of Atmospheres Background Systems include Habitats, Classics, Geometrics, Patterns and CityScapes.

Aware Speed-Of-Sound Vol. I: SFX
Stereo sound effects
Macintosh with 68020/20 MHz processor or larger; 4 MB of RAM; System 6.0.7 or later.

The Aware Speed-of-Sound Library, a single CD-ROM disc, puts more than seven hours of professional-quality, stereo sound effects online from any CD-ROM drive, with more than 1,200 SFX, digitally recorded at 16-bit, 44.1 KHz. It is a comprehensive collection compatible for use with a wide range of professional audio and multimedia applications packages for Macintosh and Silicon Graphics workstations (and now Windows). No special audio of DSP hardware is required. Aware licenses its underlying MegaDisc technology to content publishers.

Behind The Scenes
Color images, backgrounds
Any color Macintosh; CD-ROM drive.

Behind The Scenes is a collection of color images for use in multimedia, publishing, art and modeling. Volume 1, "The Basics," boasts a large collection of color backgrounds on a single CD-ROM — more than 3,000 images in three basic categories: gradients, fantasy textures and photos. Images are available in 32- and 8-bit formats to accommodate a wide variety of needs. All images fit perfectly on 13- or 14-inch monitors (640 by 480 pixels), so tiling, resizing or editing is not usually required. Images are in PICT format. Several indexes to the images are included, making it easy to find the right image for a project. Behind The Scenes owners need never worry about licensing the images; they may be used by the original owner without paying royalties or licensing fees. Future collections will focus on specific themes and will contain a comparable number of images.
$79 retail

The Best Of Sound Bytes
Music, audio tracks and waveforms
Macintosh Plus or larger; 1 MB of RAM; hard disk drive recommended; 8-bit (256) color monitor; audio board; System 6.0.4 or later.

The Best of Sound Bytes is a diverse collection of music, audio tracks and waveforms compiled from more than 12 issues of NautilusCD, a multimedia CD-ROM service. It contains 12 sound effects, two 60-second spots and 20 multimedia music beds. Each multimedia bed is presented in four standard lengths — a full 60-second version, 30- and 15-second versions and a 5-second "bumper" or "tag" version. All sound files have been recorded in four formats and can be used with the Audiomedia card or MacRecorder. Files intended for use with the Audiomedia card have been recorded in stereo at 44.1 KHz and in mono at 22.05 KHz. Files for use with MacRecorder have been recorded in mono at 22 KHz and 11 KHz. Included on the disc is Sound Bytes Index, an interactive listing and locator front-end for the sound files, as well as Sound Bytes Index.text, a text-based listing of all the files and folders.

Calculated Beauty: A Journey Through Mandelbrot Space
Multimedia experience of fantastic fractal images and sounds
Macintosh LC III or larger; 4 MB of RAM; System 7.0 or later; CD-ROM drive.

Calculated Beauty is a unique multimedia CD-ROM using a color monitor as a viewport/soundport onto a gigantic mosaic of fascinating fractal images. This "Mosaic Art" can be used to provide backgrounds, textures or unique borders for publications, art or posters. The images provide hours of pleasurable viewing. Users can customize more than 6,000 square feet of pre-calculated mosaics using their own color preferences with a variety of algorithms, color palettes, animation features and controls. Images can be saved as large, high-resolution (300 dpi or greater) PICT files or copied for use in presentations, photos and posters. Users can: calculate and zoom into infinite detail from any area of the mosaic; listen to the sounds of the fractals; view QuickTime movies; compute other fractals with the shareware provided; visit an art gallery containing more than 100 full-screen color "paintings" of fractal art from several artists; create their own slide show; and more.

Clip Video
High-quality motion clip art
Macintosh Classic or larger; VHS VCR; video-capture board.

Clip Video consists of high-quality motion clip art in a VHS video format. This gives users access to copyright-free video. These video clips can be used in conjunction with a video-capture board and software, such as MediaMaker and FilmMaker, to greatly enhance the finished product and cut production time. Potpourri, the first volume, contains a large selection of "cut-aways" to help users proceed from one section of their work to another in a professional manner, along with numerous general use clips, such as traffic, emergency vehicles and other episodes designed to be of broad interest. The product is also useful as a source of traditional "still" clip art when used with a video-capture board.

Clip*Video*Art "Animation Effects" V2c
Animated clips
Any color Macintosh; Macromedia Director; VideoWorks II or compatible.

"Animation Effects" includes animated clip art for enhancing and adding excitement to presentations. Included are colorful geometric designs, borders, stars, abstract designs and underlines. Users can expand, change colors, spin, flash colors and do special effect movements. The clips are useful for creating colorful attention to titles and to accent areas of interest. Expanding graphic shapes displays give the basics for creating colorful areas for titles or text. Clips can be combined to create user-defined effects.
$59.95 retail
Freemyers Design; 575 Nelson Ave.; Oroville, CA 95965; 916-533-9365

Clip*Video*Art "Presentation Animation"
Animations for enhancing presentations
Any Macintosh; Macromedia Director; VideoWorks II or compatible.

Clip*Video*Art "Presentation Animation" is a disk full of short animations for enhancing animated presentations. Animated special effects, pie charts, bar charts, borders, marquees, graphic arts aids, arrows, symbols and selected clip art are included for customizing presentations.
$59.95 retail

ClipMedia
Professional animations, sounds and multimedia elements
Macintosh Plus or larger (Macintosh II family recommended); 2 MB of RAM (4 MB recommended); hard disk drive; CD-ROM drive; System 6.0 or later.

ClipMedia 1, Business & Technology, is a CD-ROM containing high-quality, royalty-free multimedia clips for use in presentations and video productions. ClipMedia, like clip art, is professional-quality media that can be used and changed over and over again. Users can add the highest quality audio and visual elements to their presentations easily and cost effectively by selecting from the more than 50 graphics, 250 sound effects, 75 animations, 50 digital video sequences and 50 music pieces.

ClipMedia 2, Industry at Work, features more than 1,300 high-quality, royalty-free clips from aviation, computing, defense, education, finance, manufacturing, medicine, purchasing, retail, telecommunications and other major industries. It includes 500 sound effects, 150 animations, 35 music pieces and 700 graphic elements. Available on CD-ROM, ClipMedia 2 includes digital video and animation saved as QuickTime movies, in addition to PICS.

ClipMedia 3, Perfect Presentations, contains nearly 1,000 digitized videos, graphics, photographs, animations, sound effects and musical elements. The clips categories are: Business Landmarks, Nature, Space, Americana, Transportation, Environment, Animated Bullets and Video Backgrounds, as well as general usage multimedia elements, such as buttons and arrows. All elements contained on the CD-ROM can be used over and over again, saving users time and money.

ClipTime
QuickTime video clip art
Macintosh LC or larger; 4 MB of RAM; CD-ROM drive; System 6.0.7 or later.

Volume One of the ClipTime CD contains more than 250 professionally-produced movie clips specifically selected to work with QuickTime. Movies are 5 to 35 seconds in length; in a standard QuickTime window, up to 15 FPS. Categories include Aerials, Animals, Education, People, Sports, Business, Industry, Medical and more. ClipTime is ideal for presentations, advertising mockups, educational storyboarding, marketing demonstrations, curriculum development and numerous other applications. With ClipTime, preparing dynamic documents is as easy as copy and paste.
$99 retail
ATG, Inc.; 6921 Cable Dr., Ste. 100; Marriottsville, MD 21104; 410-781-4200, 800-952-9073 or 410-781-4963 (fax)

ClipTime Volume II "American Media"
Clip media
Macintosh LC or larger; 4 MB of RAM; System 7.0 or later; CD-ROM drive.

The American Media CD-ROM is a collection of more than 300 QuickTime movies that are focused with an Americana theme. Footage includes: North American Wildlife, Military Events, Presidents, National Parks, Historic Events and more. There are more than 50 photographs of National Parks. The pictures used Kodak Photo CD technology to bring them to the Macintosh. More than 80 sound files include: sound effects, stingers, transitions and songs. The ClipTime CD-ROM contains more than 590 MB of royalty-free media, allowing users access to large amounts of movies, photographs and sounds files for all their favorite QuickTime-supported applications. ClipTime includes the latest version of QuickTime, as well as a HyperCard Browser Software and a try-out version of Adobe Premiere.
$249 retail

■ **ColorBytes Designer Series**
Professionally-photographed backgrounds and textures
Macintosh II or larger; 8 MB of RAM; 60 MB of free hard disk space; Thunderstorm card and additional RAM recommended for hi-res JPEG files; CD-ROM drive.

The ColorBytes Designer Series is a collection of CD-ROM discs featuring highly-usable, full-page backgrounds and textures. The first two releases are Volume 1: Papers & Fibers and Volume 2: Stone & Minerals. Each volume in the series is categorized by the type of backgrounds it contains. In addition, each volume contains 25 images stored in six different resolutions and formats: JPEG (2,625 by 3,375), TIFF (1,250 by 1,750), TIFF (630 by 810), PICT (640 by 480), QuickTime (120 by 160) and BMP (640 by 480). All of the images were scanned from an original transparency on a high-end drum scanner at up to 4,000 dpi. The images were carefully color-balanced and retouched on a calibrated workstation. The discs also include an Aldus Fetch image catalog for browsing and keyword searches. With ColorBytes, users get superior quality, high usability and a great value — all this for royalty-free images.
$159 per volume retail
ColorBytes Inc.; 2525 S. Wadsworth Blvd., Ste. 308; Lakewood, CO 80227; 303-989-9205, 800-825-2656 or 303-988-6463 (fax)

Creative Backgrounds & Textures
200 color photos of backgrounds and textures
Macintosh Plus or larger; CD-ROM drive.

Creative Backgrounds & Textures is a collection of more than 200 diverse color photos of textures, sunsets, skylines, bridges, effects, deserts and more. The images have been saved in 24-bit TIFF and 8-bit PICT file formats. The medium resolution edition contains 2 MB files. The Kodak Photo CD (high-resolution edition) contains 18 MB files for full-page reproduction.

Effects Specialist 2.0
Font-styling program to easily transform any font into spectacular display type
Macintosh Plus or larger; 1 MB of RAM.

With Effects Specialist, users can easily and quickly create unique and dynamic display type for logos, headlines, mastheads, presentations, slides, flyers, brochures, newsletters, posters, banners and an endless variety of exciting graphic applications. It works with any font (bit mapped, PostScript and TrueType) in a system and outputs to virtually any device. The program offers 120 unique special effects for type; multiple modifiers for each effect enable the creation of thousands of innovative variations. Features include scaling, rotation, kerning, skewing, rulers, line-screen generator, background generator (for full control of shading and pattern), WYSIWYG display, custom color creation (including Focoltone Colour System) and bonus custom color palettes. The program also provides full-color support (including color separations), import/export capabilities for PICT and EPS files and compatibility with most desktop publishing, word processing, drawing, paint and presentation programs.

Postcraft International Inc.; 27811 Avenue Hopkins, Ste. 6; Valencia, CA 91355; 805-257-1797 or 805-257-1759 (fax)

ElasticReality
Professional warping and morphing
Macintosh with FPU and Color QuickDraw; 8 MB of RAM; hard disk drive; 8-bit display or better; QuickTime 1.5 or later; System 7.0.1 or later.

ElasticReality (ER) is a professionally-oriented warping and morphing system. ER incorporates the same outline-based user interface and advanced matting capabilities found in ASDG's Silicon Graphics product of the same name. Instead of an awkward mesh or point-based user interface, ER uses structured drawing tools familiar to any Macintosh artist. Warping and morphing effects are created by simply outlining the shapes to be controlled and linking them together. For full-motion effects, ER automatically "tweens" outlines from frame to frame, saving users much of the labor in creating moving effects. Other advanced features include the ability to define separate acceleration and transparency curves for each outline. Acceleration control allows different parts of the image to move at different rates, including ease-in, ease-out, overshoot and undershoot. The transparency editor allows for local control over the dissolve between the elements being morphed. ER can even be used for the creation of complex traveling mattes, especially in cases where other matte-making means (such as chroma or luma keying) are not possible. And, ER is resolution independent. Film sized effects can be prepared and previewed using video sized stand-ins. The outline information creating the video sized effect is directly reusable when the finished full-size effect is rendered.

ASDG, Inc.; 925 Stewart St.; Madison, WI 53713; 608-273-6585 or 608-271-1988 (fax)

Electronic Preview
24-bit color backgrounds and textures
Macintosh LC or larger; painting or layout program that accepts TIFF files; CD-ROM drive (for CD version).

Electronic Preview contains 24-bit color backgrounds and textures for printing, video, animation, 3-D and illustration. There are no royalties or stock contracts to sign. Volume 1 contains 104 images in the following categories: special effects (unique abstract translucent backgrounds); natural abstractions (textures and patterns, such as marble and wood grain); skies (from sunny to cloudy, sunrise to sunset); ad concepts (images that lend well to ad copy); and fabrics and papers (close-ups of satin, silk and Japanese papers). Electronic Preview is available on CD or sets of diskettes. The CD version has three file sizes per image, including a high resolution that yields full-page magazine reproductions (133 to 150 line screen). The diskette version is provided for consumers without CD-ROM capability and provides images at medium resolution, suitable for most multimedia purposes. A catalog of images is available.
$249 retail; CD or diskette version
$29 retail; sampler of 10 images
Single images available; call for pricing
Studio Productions; 18000 East 400 South; Elizabethtown, IN 47232; 800-359-2464 or 513-861-2932 (fax)

Electronic Preview Multimedia
24-bit color backgrounds and textures
Macintosh LC or larger; 4 MB of RAM; program that can import TIFF or PICT files; CD-ROM drive.

Electronic Preview Multimedia is the ultimate resource for the multimedia or desktop publishing professional. It provides royalty-free 24-bit color photos for presentations, 3-D illustrations, videos, films or designs. It features complete sets of presentation materials for a finished professional look. Included categories are: Marbleized Textures, Coordinated Title Pages and Borders, Accents — designed to match the marbleized papers, title pages and borders — perfect as buttons for interactive multimedia or as bullets for presentations, Tiles for 3-D modeling; some are based on the core images, others look like batiks, Slide resolutions — selected images provided in higher resolutions for slides or film.

Flo'
Freeform plasticity software
Macintosh II or larger; 5 MB of RAM; CPU storage for animations and images.

Flo' turns two-dimensional images into a pliable, plastic-like surface that users can stretch, distort and pull without causing any degradation to the original image quality. Flo' images can be output at any resolution. Numbered PICTs, QuickTime movies and PICS files can be output to many commercially available design and QuickTime applications or other animation packages. With Flo', users can scale, translate, rotate, skew or perform arbitrary transformations on any part of an image while the rest of the image remains unchanged. Also, users can work on low-resolution versions of high-res images and when they are happy with the picture, they simply swap the high-res image into the workspace and all their special effects are automatically applied. Alpha-channel support is also included. There are no control points to move; users simply use Flo's freehand outlining tools to achieve these amazing results.
$199 retail

FountainView 3.0
A collection of 104 gradient screens (fountains) and a utility program to create new fountains
Macintosh Plus or larger.

FountainView is a collection of fountains. Fountains are screens of halftone dots that gradually change in size, giving the visual impression of black merging into white in one direction across the page. The fountains are composed of 13 halftone shapes that graduate in eight different directions. Each file is in screen-visible EPS format, producing 256 continuous shades of gray. The halftone dots shapes include rings, triangles, weaves, diamonds, ovals, lines and a random texture. A user can view each fountain in relation to other page elements, then position, size and select the desired range of grays or change its shape (application program permitting). Included with the program is Fountain Modifier, which enables users to create new fountains of any halftone frequency and screen angle.

Gryphon Dynamic Effects
Special effects library
Macintosh LC or larger; Adobe Premiere; System 6.0.7 or later.

Gryphon Dynamic Effects is a special effects library of 20 filters that are plug-ins for Adobe Premiere. Users can add some sizzle to their digital movies by creating professional-quality effects quickly and easily. Delay each color channel for some colorful "ghosting"; twist and distort images any way imaginable, add some chrome, or flames for that unusual look, or duotone, dust and jitter to recreate an old time movie. Additional filters include some useful utilities, such as Brightness & Contrast. Gryphon Dynamic Effects, Volume 1 allows users to create their own movie magic with the coolest filters around.
$119 retail

Gryphon's Morph 2.0
Smoothly transforms one image into another
Macintosh LC or larger; System 6.0.7 or later.

Gryphon's Morph allows users to create amazing two-dimensional morphing, dynamic morphing, warping and caracaturing animations on the desktop. This software has been noted to be easy to use, compatible with all Macintosh and painting and drawing programs, as well as digitized, scanned or synthetic images. Users can play back the movies as a QuickTime movie or a PICS animation, import into a variety of presentation or editing applications, or use third-party hardware to output to film or video.

Hi Rez Audio Vol. 1
License-free audio tracks
Macintosh LC or larger; 3 MB of available RAM; 13-inch color monitor; System 6.0.7 or later; CD-ROM drive.

Hi Rez Audio Vol. 1 is a collection of 63 professional, license-free audio tracks for use in multimedia presentations. The disc contains 42 original music tracks, ranging from 10 seconds to 1 minute 30 seconds, plus more than 20 sound effects. An elegant interface allows users to browse through 40 minutes of Red Book audio at a click of the mouse. For convenience, digitized versions at 22 KHz and 11 KHz (mono) in AIFF, SoundEdit and SoundEdit Pro have been included. Another unique interface option allows users to copy any sound clip directly to a hard drive. The SoundEdit Pro and AIFF formats are accompanied by MPC Markers (Musical Phrase Change) for easy editing and looping capabilities.

The Hollywood Film Music Library
Clip music
Macintosh LC or larger; CD-ROM drive.

The Hollywood Film Music Library is "clip" music that features an interface for autolocation and remote control of CD-ROM players. The database catalogs the entire Hollywood Film Music Library — 37 CDs currently — almost 38 hours of digitally-recorded and mastered film/video/multimedia cues, created by award-winning Hollywood composers and producers. The database includes cue description, length, styles, tempo by beat and frame, alternate ending information, instrumentation, composer and publisher information, and location by disc and index number. Multiple field search information is supported. The Hollywood Film Music Library contains roughly 45 minutes of 16-bit redbook CD digital audio and additional 20 minutes of 8-bit mono soundfiles (Audio AIFF files) that can be dragged onto the Macintosh desktop, played and edited with such programs as Sound Designer and Alchemy and used in multimedia presentations created by any software supporting AIFF soundfiles, such as Macromedia Director and Digital Performer. These audio files are licensed for non-broadcast usage by the end user. Additional licensing may be secured through The Hollywood Film Music Library. MIDI soundfiles are also available on an update.

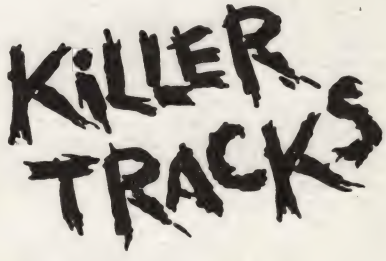
Killer Tracks Multi Media Music Library
Diverse collection of cutting edge music created specifically for multimedia productions
Macintosh II; 4 MB of RAM; System 6.0.7 or later; CD-ROM drive.



The Killer Tracks Multi Media Music Library is a three CD audio collection that has been specifically produced for multimedia productions. They are available on CD-ROM in both AIFF and WAV. files, as well as "Red Book" audio. Each of the three CDs — Sales, Training and Education — contain more than 60 minutes of music, production elements and live sound effects. The music categories contained on each CD are as follows: Rock, Urban, Hi-Tech, Comedy, Semi-Classical, Mellow, Industrial and New Age. Also included is a wide variety of production elements, such as zaps, stingers, space effects, links and bridges, comedy effects and live office sound effects. The CD-ROM formats are as follows: 22 KHz 8-bit Mono AIFF files for Macintosh; and 22 KHz 8- and 16-bit Stereo WAV. files for PC. This library is licensed exclusively for non-broadcast multimedia productions.

ListMaster
Transforms names into graphic effects
Macintosh Plus or larger; PostScript printer.

ListMaster allows users to take one name, a list of a few names or even lists of hundreds of names and turn them into exciting new graphics. ListMaster will fill circles, triangles, diamonds, spirals, rectangles and numbers with a name list. Tiling routines allow for large graphics, so artwork for beach towels, blankets or jumbo posters can be created with ease. Effects created with ListMaster can be printed directly or saved as EPS files. ListMaster can take name lists directly from a word processor, or it has its own built-in name editor. Bullets can be added automatically to the list and any PostScript font can be used to create the various effects. Names set to form multiple numbers print continuously. For example, "1990" will fill, in order, from the first name to the last and, if the list isn't long enough, it repeats until all of the digits are full.

Loops: Music For Multimedia
100 music loops
Macintosh LC or larger; 4 MB of RAM; System 6.0.7 or later; CD-ROM drive.

Users can take multimedia to new heights of taste and enjoyment with 100 music loops to convey a full range of moods of style. Created by leading British session musicians, users will find a highly original and imaginative blend — all royalty-free for non-commercial or broadcast use. Categories include: Media (high-impact intros and themes); Rock (attention-grabbing, up-tempo riffs); Jazz (cool, sophisticated modern jazz); Fun (when users want a lighter touch); World (evocative, travel themes); Atmospheres (abstract tonalities and textures); and Shorts (stings, fanfares and endings). Each track is supplied in full stereo CD-Audio (22 KHz), AIFF and in the standard MIDI file format.

Magiclips Music
Library of musical clip art
Macintosh LC or larger; CD-ROM drive.

Magiclips Music is a library of production music, or musical clip art, on CD and CD-ROM. The music is composed and produced by professionals, and the purchase price pays all uses with presentations (no additional reporting, royalties or fees). File types included on CD-ROM include 11K .voc; 11 thru 44K .wav; MIDI 0, MIDI 1 and Master Tracks Pro MIDI. Magiclips Music includes 35 complete compositions (including seven fanfares), each fully orchestrated and creating a different "feel." Although the production style is contemporary, pieces with classical and traditional American overtones are included. Composition lengths range from 9.5 seconds to 65 seconds (entirely digital recording chain).

The Multimedia Library CD-ROM Royalty Free Series
Series of royalty-free image, sound, MIDI file and educational CD-ROMs
Macintosh II or larger; 4 MB of RAM; CD-ROM drive; System 6.0.7 or later.

Each image CD-ROM in the Image series contains 200 color photographs, each in 24-bit TIFF, gray-scale and 8-bit system palette PICT format. Image Series titles include: Volume I: Russia/China; Volume 2: South Pacific/California Coast; Volume 3: Parades/Demonstrations and Special Occasions; Volume 4: Art of Ancient Egypt (from the collection at the Metropolitan Museum of Art); Volume 6: Arms and Armor (from the Collection at the Metropolitan Museum of Art); Volume 7: Islamic and Ancient Near East Art (from the Collection at the Metropolitan Museum of Art); Volume 8: Nation's Capital/New York City; Volume 9: The Holy Land; and Volume 10: Aloft! — Photographs by World Freestyle Hang Gliding Champion John Heiney. More titles are being prepared.

Each royalty-free Sound CD-ROM contains roughly one hour of sound (200 15 to 30 second music clips), divided into short segments suitable as audio enhancements of multimedia and desktop presentations. Sound Series titles include: Volume 1: Music for Multimedia, which includes clips of rock and pop music, polyrhythms, fanfares, Christmas carols, hymns and children's songs; and Sound Series Volume 2: Ethnic and Acoustic Music for Multimedia, which contains 200 sound clips of varying lengths from 15 to 20 seconds up to three minutes of Greek, African, Latin American, Irish, American Folk, South Indian and acoustic drums, guitar and piano pieces.

Each MIDI File disc contains files in standard MIDI format along with The Multimedia Library's unique MIDI Browser, which allows any theme to be found by composer, musical category or note search (solfeggio). Volumes 1 and 2 each contain 4,000 classical music themes (the works of more than 150 composers) from the "Dictionary of Musical Themes" by Barlow and Morgenstern as published by Crown Publishers. Volume 3 contains the 23 Mozart String Quartets. Volume 4 contains Beethoven Symphonies 5 and 6.

Pixar One Twenty Eight
Production-quality images to compliment graphic arts software
Macintosh II or larger; 4 MB of RAM; hard disk drive; 32-bit QuickDraw; color display (24-bit card recommended); System 6.0.7 or later; HFS or ISO-compatible CD-ROM drive.

Pixar One Twenty Eight is Pixar's private collection of high-quality, photographic textures specifically designed for use in computer graphics. The textures on this CD are ideal for use with paint, photo retouching, page layout, presentation, video and multimedia applications. The collection incorporates a patented technology that allows the textures to be tiled seamlessly. As a result, when the textures are tiled to cover a large area, they will appear as a single, smooth image without breaks or lines. The Pixar collection is easily accessed through a plug-in for Photoshop. The Pixar library includes 128 unique 512 by 512, 24-bit TIFF files, which tile seamlessly to fit any area up to 4,000 by 4,000 or 300 dpi at 13.3 by 13.3 inches. The CD can be read by any application that can read TIFF files on Macintosh, Windows and Unix workstations.

Pixar Typestry 2.0
Software for creating dimensional type
Macintosh II; 8 MB of RAM; math coprocessor; 32-bit QuickDraw; MultiFinder; System 6.0.7 or later.

Pixar Typestry transforms Type1 or TrueType fonts and Adobe Illustrator files into three-dimensional objects. Users can scale them, twist them, stretch them, warp them—even make a little movie with them. Typestry invokes RenderMan magic to transform a simple word into an extraordinary picture. Version 2.0 of Pixar Typestry features more power, more design options and more amazing effects. In addition to the stunning lighting effects and motion blur, new features include animatiable shooting Particle effects and Rubber sheets to create waving flags and bouncing balls. Images will sparkle, sizzle and glow. Users can use their own PICT and TIFF files to make new Looks or customize versions of existing Looks. Many of the new capabilities make it suitable for multimedia professionals, but the images can easily by used in print.

PolyTechnics
Special effects for use with ElectricImage models
Macintosh II; 8 MB of RAM; System 7.0 or later.

PolyTechnics empowers users to create special effects and modify models in ways never before possible. PolyTechnics provides a suite of powerful features that were designed to operate directly on ElectricImage models, creating complex replacement animations quickly and easily. Features include: Explosions, providing the ability to shatter FACT models in a variety of manners over a multiple frame sequence; Emitters, which release particles according to a widely variable set of parameters, including energy, entropy, time, color and direction; Magnets, which affect both FACT models and particles generated by emitters; Channels, which act as poly/particle reflectors and traps, containing or excluding particles as necessary; and Gravity, which can affect entire models, as well as polys and particles, exerting a continuous pull in any direction. These features can be used individually or in combination with each other. Multiple concurrent explosions, magnets, emitters and channels are allowed. Multiple models can be independently scaled as they are brought in PolyTechnics to assure compatibility.

Pyromania! (Playing With Fire On CD-ROM)
High-quality, 24-bit color PICT file sequences and QuickTime movies
Macintosh LC or larger; QuickTime; System 7.0 or later; CD-ROM drive.

Pyromania! is a royalty-free collection of high-quality, 24-bit color PICT file sequences and QuickTime movies of fires and explosions. There are 19 different sequences, each lasting from 24 frames to 160 frames for a total of 1,100 PICT files. The originals are not "video captured," but are professionally photographed using 35mm motion picture cameras at a Hollywood visual effects studio. The images were scanned pin-registered at 2K (2,048 by 1,536) resolution and sampled down to 640 by 480 resolution at 72 dpi. Twenty-four QuickTime movies are provided as previews and running examples of how to use some of the material. Pyromania! is for use in game development, multimedia, broadcast video, scientific analysis and blowing up spaceships. Also used on "Babylon 5."

Welcome to a nostalgic compilation of some of the best early and timeless cartoon classics. Enjoyable for their artistic value and slapstick humor, these QuickTime movies will make users laugh again and again. QuickToons II: What's Up, Disc? contains six cartoons: "Falling Hare" Bugs Bunny; "The Case of the Missing Hare" Bugs Bunny; "Parlez Vous Woo" Popeye; "Cooking with Gags" Porky Pig. This series of QuickTime volumes was produced to provide pre-digitized and pre-compressed QuickTime movies for education, entertainment, personal library and potential multimedia projects.

Screen Caffeine Pro
Background images and texture patterns
Color Macintosh; 13-inch monitor; CD-ROM drive.

Screen Caffeine Pro is a collection of 530 professionally produced background images and texture patterns for multimedia and presentation designers. The images are fully digitally created, not scanned, and supplied on a single CD-ROM. Also included are more than 100 examples showing the backgrounds used in multimedia and presentation designs. The images and examples are accessed through an interactive browser and include an entire spectrum of visual effects — from stark, monchromatic options to vibrant hues. Also included are more than 400 step-by-step instructions on how to produce variations from the graphics. The images are 72 dpi; 640 by 480; millions of colors; and in PICT format.

Seasons In Motion
Movies glorifying the change of seasons
Macintosh LC or larger; 8-bit or greater color display; System 6.0.5 or later; CD-ROM drive.

Seasons in Motion enables users to watch winter, spring, summer and fall come alive; and marvel in the beauty and spirit of the varied ways in which man adapts to the Earth's changing seasons. They can take an imaginary trip from the changing leaves of a New England fall, through snowy ski slopes, across fields of spring's first blooms, to the sun drenched beaches of summer resorts. Each beautiful video captures the wonder and joy of the season. Accompanying the videos are music instrumentals ideal for any multimedia presentation.

Smart Art
Text effects, graphics and borders
Macintosh Plus or larger; LaserWriter.

Smart Art is a library of customizable headline text and graphics effects. Each volume in the Smart Art series contains 15 effects, stored as EPS files, that can be manipulated using the Smart Art desk accessory and pasted into page layout, word processing, presentation or other applications, and printed on a PostScript printer. Smart Art Volumes I, III and IV contain headline text effects, such as fitted arc, neon and diffuse shadow. Smart Art headline text effects work with all Type 1 and Type 3 PostScript fonts, including the entire Adobe Type Library. Smart Art Volume II contains two- and three-dimensional graphic effects, such as spirals and starbursts.

Sound Creative
CD-ROM sound librarian
Macintosh Plus or larger; CD-ROM player.

Sound Creative is a CD-ROM sound librarian for HyperCard, VideoWorks, SoundEdit, SoundWave, SoundCap and Studio Session. It contains more than 610 MB of data. Although the design was made in France, two languages are used (French and English) to help recover the desired information. Since the creation of the disc, a second index search has been made available on disk (i.e., a utility under HyperCard). The stack knows how to handle synonyms in relation to sound in three languages — Spanish, French and English. It allows users to copy the sounds onto HyperCard stacks and permits users to listen to them as a function of the search. In total, there are 5,962

modifiable and editable files (regardless of public domain files). Out of these, about 3,000 sounds are simple words from spoken French. These are useful for education because they are very didactic.

Sound Effects Collection CD
Compilation of sound clips and special effects
Any color Macintosh; CD-ROM drive.

Sound Effects CD-ROM is a vast compilation of 2,177 sound effects and short music clips. Each sound is conveniently stored in both SoundEdit and System 7 Beep Sound formats for the Macintosh (and WAVE format for Microsoft Windows). A special browser lets users sample each sound with a host of sound utility programs for customizing their computer and programs. The sounds are organized by categories including animals, beep/clicks, bells/whistles, cartoons, chimes, classic effects, computer environments, equation-generated effects, high-tech, house, humor, instruments, shorts, nature, notes/chords, office, people, scary, space, sports, tasteless things, war/military, water and weird.
$19.95 retail; bundle and distributor pricing available

Sound Machine
Sounds
Macintosh Plus or larger; 2 MB of RAM; System 6.0.5 or later; CD-ROM drive.

The Sound Machine contains more than 450 sound effects and classic movie sound clips. Users can replace their Macintosh System sounds with a variety of fun and exciting alternatives, or add them to HyperCard stacks. Stored in sound resource, SoundEdit and other formats, they are ideal for presentations and multimedia. The Sound Machine includes SoundMaster and various other sound utilities. A HyperCard interface is provided to listen to the sounds (HyperCard 2.0 is included).

Sound/FX CD
Digitized sounds
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; CD-ROM drive.

Sound/FX CD contains more than 225 high-quality, digitized sounds. These sounds, digitized in 8-bit monophonic and full 16-bit stereo, put the power of a recording studio at a user's fingertips. Sounds are divided into 13 separate categories, ranging from On the Farm to At the Office. Within each of these various categories are dozens of sound segments, offering users a wide variety to choose from. From a police siren to an old man laughing, from birds singing to a telephone ring, the Sound/FX CD is designed to give users the tools needed to effectively communicate with their audience. Also included is a collection of one minute background recordings designed to communicate environments, such as office, home or airport.

Stingers
98 professionally-recorded and edited music clips
Macintosh II; 2 MB of RAM; CD-ROM drive.

Stingers is a Macintosh and MPC-compatible CD-ROM disc containing more than 100 professionally-recorded and edited music clips. It is full of exciting and dramatic music introductions, exits, links and bridges in various styles, including ethnic percussion, solo instruments, drum rolls and sound effects. In addition, all music clips are license free for all multimedia products, including for resale. The Music Bank has tailored Stingers for developers by offering its music segments in lengths from 2 seconds to 2 minutes. To ensure that multimedia developers have the greatest flexibility, each of the 98 music segments are offered in CD-Audio, 22 KHz AIFF 16-bit stereo and mono, 22 KHz AIFF 8-bit stereo and mono, SND, 22 KHz wave 16-bit stereo and mono and 22 KHz wave 8-bit stereo and mono.

StrataShapes
Three-dimensional objects
Macintosh II family, LC, SE/30 or larger with FPU or Power Macintosh; hard disk drive; StrataVision 3D and Studio Pro.

StrataShapes are collections of ready-to-use three-dimensional objects that can be used with StudioPro and StrataVision 3D. Each object in a StrataShapes library is made up of predefined 3D geometry and real life material attributes, like color, texture, glossiness, etc. In addition, some StrataShapes are auto-animated. For example, a helicopter's blades will spin or a bird's wings will flap automatically in StrataVision 3d without a user having to script the motion. StrataShapes libraries include Lighting Shapes, Furniture Shapes, Starter Shapes, Sports and Domestic Cars. There are currently 13 libraries available.
$169 retail
Strata Inc.; 2 W. Saint George Blvd., Ste. 2100; St. George, UT 84770; 801-628-5218, 800-869-6855 or 801-628-9756 (fax)

StrataTextures
Surface/solid materials
Macintosh II family, LC, SE/30 or larger with FPU or Power Macintosh; hard disk drive; StrataVision 3D and Studio Pro.

StrataTextures are collections of surface and solid textures. Libraries allow StrataVision 3D users to apply predefined surface attributes to three-dimensional objects. Each library contains approximately 20 predefined surface attributes. Attributes consist of various combinations of color maps, bump maps and procedural maps. Library attributes can easily be edited. There are currently 15 texture libraries, they include: Wood Textures, Wood Textures II, Stone Textures, Metal Textures, Tile Textures, Brick Textures Off Beat Textures, Solid Textures, Designer Surfaces, StarterTextures and more. StrataTextures give StrataVision 3D users the power to immediately change the surface properties of a selected object, much like a word processing program allows a change of fonts, and just as easily. The libraries give StrataVision 3D users greater flexibility in creating photo-realistic illustrations by conveniently increasing the available surface attribute options.

SuperToons
Full-color Superman cartoons in QuickTime
Macintosh LC or larger; 1 MB of free RAM; hard disk drive; CD-ROM drive.

Now users can enjoy Superman cartoons right on their own computer. SuperToons contains 30 minutes of full-color QuickTime movies featuring Superman. Each movie is complete with audio. This CD-ROM contains two different movie types: the movies on the root have been optimized for CD playback in real time, while the directory labeled "HiRez" contains better-quality, higher-resolution movies that may be used for desktop presentation or anything that requires high-quality images. Included are: "Volcano," "Underground World," "Mechanical Monsters" and "Terror on the Midway."

Texture City Pro 100 #1
Professional-quality textures
Macintosh Color Classic or larger; 2 MB of RAM; 24-bit color capability; CD-ROM drive.

Texture City offers users the very best in True-Color 24-bit imagery for use in video production, 3-D graphics, color slides and print production. Texture City's extensive library provides the ultimate in digital production images. These professional-quality textures include animal skins, minerals, stones, woods, textiles, plants, space, marbles, metals, special fx, scenics and much more. There are 100 different 752 by 480 sized images. And unlike other packages that may include small repeating pattern textures, each full-screen Texture City image has real world look and clarity. The images come in TARGA, TIFF, PCX and IFF24 file formats. The CD-ROM is ISO-9660 formatted and compatible with Macintosh, DOS/Windows, Video Toaster and Amiga computers. This variety of formats gives users the ability to use these high-quality images in hundreds of today's software programs. By combining images with image processing programs, users can produce hundreds more.

Trick Of Light
Eye-catching backgrounds
Any color-capable Macintosh; 4 MB of RAM; System 6.0.7 or later; CD-ROM drive.

Third in the Pixel Presenter Series is Trick of Light, a CD-ROM with hundreds of megabytes of eye-catching backgrounds to add pizzazz to multimedia productions and desktop publishing projects. Trick of Light backgrounds are royalty-free. Each of the 150 unique and usable backgrounds is saved in three resolutions: 3,072 by 2,048 TIFF for printing at full-page sizes; 1,536 by 1,024 TIFF for printing at half-page size and PAL video or large-screen multimedia; and 640 by 480 for standard 13-inch monitors and NTSC video. The 640 by 480 files are also saved in 8- and 24-bit PICT format for immediate use. Many of the backgrounds and lighting effects have been photographed and saved as separate files — plain, lit and mask. By using Photoshop, or any other image retouching program, they can be recombined in literally thousands of ways — re-colored and resized to give users an unlimited number of possibilities. The 8- and 24-bit browsers allow users to preview all the basic images, as well as give hints and tips on how to customize them and to produce just about every background that they'll ever need.

TypeStyler 2.0
Display-type special effects
Macintosh Plus or larger; 1 MB of RAM (2 MB for color; 4 MB with System 7).

TypeStyler is a unique tool that can be used to achieve dramatic special effects with display type. It provides unparalleled control over typefaces, enabling users to bend, squeeze, stretch, twist and rotate text. Users can also add perspective, such as shadows, shades, patterns and colors. TypeStyler prints styled text smoothly using either PostScript or QuickDraw printers. TypeStyler output is device-independent on both printers, so output prints at maximum resolution of the printer. TypeStyler also includes a number of other features helpful to graphic designers and desktop publishers, such as the ability to import and export paint, PICT and EPS files. TypeStyler is compatible with both PostScript and TrueType fonts. It is System 7 savvy.

VidSynth
Video synthesizer
Color Macintosh; FPU; 2 MB or more of RAM; System 6.0.5 or later.

VidSynth is a video synthesizer system. Video synthesis is a new technique used to create abstract animated images. Analogous to music synthesis, video synthesis has its roots in mathematics. Like a music synthesizer, users don't have to understand math to use VidSynth. VidSynth's menus provide a fun way for users to quickly and easily create unique and interesting images and animations. With VidSynth, users can create amazing "eye-catchers" for use in graphic arts, advertising, television or multimedia, faster than they can draw or program them, and at a cost lower than clip art. Once users have created the artwork they want, the image can be pasted into a document or the animation can be recorded on videotape.

Visuals
Seamless textures
Macintosh II or larger.

Library 1 is a combination of textures consisting of Wallpaper, Stone, Interior, Still Life, Flooring, Architecture and Landscape. All Visuals are created with seamless edges, which enable them to provide a perfect mapping in three-dimensional render programs and three-dimensional text programs. They can also accomplish tiled backgrounds in popular presentation programs. Library 1 contains 50 Visuals. Each Visual is a 72 dpi (some Visuals are as much as 150 dpi), JPEG-compressed PICT image. In addition, more than 70 bump, reflective and transparent maps are provided. Also included is a gray-scale map for the Visuals to which users may add a different color. The bump maps are created with the darkest shade as the most recessed area. Negative and positive maps are to be used as transparency maps, depending on which map a program requires. Along with Visuals comes a very extensive reference manual with individual specs on each texture, as well as hints on how it may be best applied.

Jasmine Multimedia Publishing; 6746 Valjean Ave., Ste. 100; Van Nuys, CA 91406; 818-780-3344, 800-798-7535 or 818-780-9705 (fax)

WraptureReels One
Animated textures and looping video clips
Macintosh LC or larger; 4 MB of RAM; QuickTime 1.0 (included); HyperCard 2.1 (included); System 6.0.7 or later; CD-ROM drive.

WraptureReels One is a CD-ROM library of more than 500 MB of seamlessly looping, broadcast-quality animated textures and environments in QuickTime

format. Users can use the WraptureReels like static textures to map to 3D objects, or use them like any QuickTime movie — in presentations, animations and multimedia productions. Also included are animated and static masks, static backgrounds, sounds and other "goodies" that make it an excellent source for creating special effects and other QuickTime movies using the new QuickTime editors. Because the Reels are broadcast quality (full size-640 by 480, full motion-30 fps), users can also output them frame by frame to video. This ability is especially powerful for video producers who can now use the QuickTime editors to digitally manipulate their video and create new types of special effects.

Form and Function; Distributed by Educorp; 7434 Trade St.; San Diego, CA 92121; 619-536-9999, 800-843-9497 (orders) or 619-536-2345 (fax)

Wraptures One
Library of fine textures and backgrounds on CD-ROM
Macintosh LC or larger; CD-ROM drive.

Wraptures One is a CD-ROM library of seamless, tileable, 32-bit digital textures in PICT format for mapping to 3D objects, and using as presentation backgrounds and graphic source material. Wraptures can be used in 3D renderings, presentations, graphic productions, QuickTime movies, animations, desktop publishing, multimedia productions and anywhere users can import a PICT file. Wraptures One encompasses a wide variety of image categories, including Architecture (ashlar, brick, ceramic tile, brushed steel, stucco, wood flooring, stone walls); Astronomy (the Earth and Moon, planets [real and imaginary], galaxies); Botanical (shrubbery, bark, palm tree, clover, grass); Natural Elements (clouds, fire, water, sunsets, expansive vistas, mountains, boulders); Gumbo (fine imported papers, camouflage, leopard, cow cow boogie); and Others (animated environment maps of clouds and water, bump maps for various textures). A Browser utility on the disc allows users to peruse the textures and copy them to a hard drive. An electronic and printed catalog of images is included.
$129 retail
Form and Function; Distributed by Educorp; 7434 Trade St.; San Diego, CA 92121; 619-536-9999, 800-843-9497 (orders) or 619-536-2345 (fax)

Wraptures Two
Library of fine textures and backgrounds on CD-ROM
Macintosh LC or larger; CD-ROM drive.

Wraptures Two is the second volume in the Wraptures Library of seamless, tileable textures on CD-ROM. Like Wraptures One, Wraptures Two contains 130 seamless, 32-bit, tileable textures in PICT format for use as three-dimensional texture maps, presentation backgrounds and graphic source material. Wraptures Two contains more of the same high-quality textures found in the categories established on Wraptures One: Wood, Marble, Stone, Metal, Foliage, Fabric, Clouds, Water, Mountain-scapes and more. New texture types, like Foods, and more off-the-wall textures, like Soap Suds and Human Skin, are also included. To introduce users to WraptureReels One, a QuickTime library of seamlessly looping, animated textures and environment maps, a few new WraptureReels are included on the disc. An electronic and printed catalog of images is included.

Zounds
Creates fantasy environments of sound in the background
Macintosh Plus or larger; 1 MB of RAM; System 6.0.7 or later.

Zounds creates soothing environments of sound that run in the background on a Macintosh. Zounds provides instant relief from office noise and chatter, transporting users to faraway places. Scientific studies have shown that soothing background sounds reduce stress and promote greater productivity by as much as six percent. In a 40 hour week, users would accomplish about 2.5 hours more work. Over the course of a year, that translates into an additional three weeks of productivity. And with Zounds, those additional three weeks can be spent in the Caribbean, on a country farm or exploring a tropical rain forest. Zounds' modules include Aviary, Archipelago, On the Farm, Harp and many others.

Creative/Other

Adobe Premiere 4.0
Brings digital video capabilities to the desktop
Macintosh II; 4 MB of RAM; hard disk drive; System 6.0.7 or later; QuickTime 1.0 (included); 32-bit QuickDraw 1.2 or later; QuickTime-compatible, digital video capture board recommended.

Adobe Premiere is digital video software. Developed to take advantage of Apple's QuickTime system software extension, this software enables users to easily combine video footage, audio recordings, animation, still images and graphics to create high-quality movies right on the Macintosh. Features include: intuitive user interface displays tracks in "filmstrip" style, allowing users to see all the details in clips; animated icons simplify selection of digital effects, including wipes, fades, dissolves, zooms and page turns; Adobe Photoshop-compatible filters can be applied across video segments to achieve special effects and image control; and the ability to superimpose titles, graphics and even other video images to create dramatic effects. Premiere 4.0 comes standard with CD-ROM containing tutorials, clip media and documentation.

Aldus Fetch 1.2
Multiuser, mixed-media database for cataloging, browsing through and retrieving digital media
Macintosh Classic or larger (Macintosh SE/30 or larger recommended); 4 MB of RAM (5 MB recommended); hard disk drive; System 6.0.7 or later.

Aldus Fetch is a multiuser, mixed-media database program that enables users to easily catalog, browse and retrieve images, animations and sound files on a Macintosh. It is designed for users in professional graphics workgroups who purchase, create and reuse art files and would like to catalog them in a mixed-media database. Aldus Fetch allows users to browse through a visual catalog of their files, rather than scroll through a text-only list of filenames. Users are able to see what each image and movie looks like, and hear what each sound file sounds like — without opening source applications. Aldus Fetch users are able to create a visual catalog of up to 100,000 digital-media files, including illustrations, clip art, sounds, photo images, presentations and video clips. Files can be stored and retrieved from anywhere on a network, whether the volume is on a local drive, across the network, on an unmounted CD-ROM or on a removable disk. All standard Macintosh file formats are supported, in addition to several proprietary formats, such as Adobe Photoshop, Aldus FreeHand and Aldus Persuasion.
$149 retail; single user
$299 retail; multiuser
Aldus Corp.; 411 First Ave. S, Ste. 200; Seattle, WA 98104; 206-622-5500, 800-685-6636 or 206-343-4248 (fax)

Award Maker Plus
Customized awards
Macintosh 512K or larger.

Award Maker Plus is a software tool that lets a user create and print professional-quality awards, certificates, licenses, coupons or other documents. The program will print hundreds of predesigned award styles, allowing a user to enter text, select the border style and, in some styles, enter a user's own picture. The program comes with hundreds of different awards and certificates for sports, school, home and business; several styles of borders; sample awards; gold-embossed press-on seals; a special price on pin-feed parchment paper; and the ability to create name files and print out awards for an entire class or group.

Education Award Library and Sports Award Library are supplement libraries for use with Award Maker Plus. Each library includes 10 new border styles and four new fonts. Both male and female versions are included. Education Award Library contains more than 200 professionally designed award styles. Award subjects range from music to lost teeth to homecoming. Sports Award Library contains more than 600 professionally designed award styles. Awards range from baseball to sailing to karate.

BadgeMaker
Produces an array of badges, labels, tags and postcards
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.

BadgeMaker produces an impressive array of badges, labels, tags and postcards of any size, for any event. The program supports many design functions, including text, allowing users to modify the predesigned templates or create their own custom badge or label size and design from scratch. Users can even import and scale PICT graphics from the Clipboard. It also has a database feature that allows users to import an ASCII file to the BadgeMaker database, which can merge up to 10 fields onto badges or labels. BadgeMaker supports any Macintosh-compatible printer (300+ dpi devices are recommended).

BannerMania
Personal productivity; allows users to create banners
Macintosh Plus or larger; 1 MB of RAM.

BannerMania features an easy-to-use interface and high-quality special effects to allows users to create spectacular banners on a wide variety of color and black and white printers. Full preview allows users to redesign their banners to fit their needs before printing. On-screen preview allows users to display sales or product messages in an ever-changing display. BannerMania ships with 20 special effects, 27 eye-catching shapes, 19 different fonts and 40 ready-to-use designs, totaling more than 800,000 mix-and-match combinations to choose from.

CompassPoint
Image management system
Macintosh II or Quadra; System 6.0.7 or later.

CompassPoint is a comprehensive image management system targeted at individuals and companies who store and retrieve more than 300 images from any medium in a computerized management system. The CompassPoint system catalogs and manages all types of images: photos, slides, overhead transparencies, illustrations and QuickTime movies. It also offers an exclusive feature called NaviTrack, which automatically tracks where and when images have been used and where they are currently filed or who has borrowed them. Other features include: displays complete and detailed information customized by a user about each image; quickly finds desired images by using multiple search criteria to define and narrow the choices; saves money by making existing images easily retrievable, eliminating the need to recreate a misplaced image; a check-out security system to prevent unauthorized check-out or export of images; and the Image Filing Tutor, which gives complete user instructions on how to set up and efficiently maintain a physical and electronic/archival image filing system. CompassPoint supports mixed image formats, including TIFF, TIFF CMYK, PICT, Kodak Photo CD and EPSF, as well as JPEG compression with QuickTime. CompassPoint also catalogs images in permanent archives, which saves hard disk space by storing and retrieving images on removable mass storage.

Cumulus PowerLite 2.0
Image and multimedia database solution
Macintosh with 68020 or larger processor; 1.5 MB of RAM; System 7.0 or later.

Cumulus PowerLite is an image and multimedia database solution intended for the single user or for Cumulus PowerPro clients who, in addition to accessing the main catalogs on the server, want to keep their own private catalogs on their local hard disks. Already extremely fast and powerful on standard Macintoshes, it takes full advantage of the increased performance of the Power Macintoshes. A huge variety of image or multimedia formats may be cataloged into multiple open catalogs that can hold up to 50,000 records each and later be accessed directly from within other applications, such as QuarkXPress, Photoshop, PageMaker, FrameMaker or IsoDraw. A thumbnail representation of the image and all descriptive information is stored within the catalogs, so offline volumes can also be browsed using all the search criteria, such as keywords, status and full-text retrievable notes. New features include hierarchical keywords, extensive support of Drag and Drop and customizable multiple Boolean searches.
$199 retail
Canto Software, Inc.; 800 Duboce Ave.; San Francisco, CA 94117; 415-431-6871, 800-332-2686 or 415-861-6827 (fax)

Cumulus PowerPro 2.0
Network image and multimedia database solution
Macintosh with 68020 or larger processor; 1.5 MB of RAM; System 7.0 or later.

Cumulus PowerPro is a professional client/server network image and multimedia database solution. Already extremely fast and powerful on standard Macintoshes, it takes full advantage of the increased performance of the Power Macintoshes. In addition to the new features, such as hierarchical keywords, customizable multiple Boolean searches and inter-application dragging sizes found in Cumulus PowerLite, Cumulus PowerPro offers full support for AppleScript automation. Unlimited numbers of image or multimedia files may be cataloged into any of several simultaneously open Cumulus databases and later be accessed with either the Cumulus•Client Software or directly from within other applications, such as QuarkXPress, Photoshop, PageMaker or IsoDraw. A thumbnail representation of the image and all descriptive information is stored within the catalogs, so offline volumes can also be browsed using all the search criteria, such as keywords, status and full-text retrievable notes. Catalogs are compressed and very small in size. All operations, including administrator functions, can also be executed in the background. Cumulus is OPI aware. Customizing service and site licensing are available.

The Digital Directory
Unique showcase for digital graphic professionals
Macintosh II or larger; 5 MB of RAM; CD-ROM drive.

The Digital Directory is a showcase of digital graphic talent. The disc features the work of digital illustrators, photographers, desktop publishers, electronic designers, computer animators, multimedia artists and their related service industries. Distribution is free to corporate communications departments, magazine and publishing art buyers, multimedia production houses, ad agencies and design studios nationwide. Art buyers can browse the material much like a traditional directory, or quickly locate what they're looking for by simply filling in the blanks of a card on screen. Listings, often unused in other directories, are a vital feature of the Digital Directory. The listings contain a thumbnail visual and a brief advertiser profile.
Distributed free to art buyers in advertising and corporate communications
The Digital Directory, Inc.; 301 W. 110th St. 2n; New York, NY 10026; 212-864-8872

Frame Up
Multimedia demonstration tool
Macintosh Plus or larger; RS-232 equipped videodisc player.

Frame Up is a demonstration tool for showing the potential of interactive video in fiction and training. Frame Up demonstrates a wide gamut of interactive techniques, from classical branching to real-time simulation. The plot involves a young fellow named Eddy who falls asleep in a department store and wakes up to find himself embroiled in a plot to rip off the store. A user helps Eddy make decisions to escape from the store. Some decisions lead Eddy to the store's video surveillance system, where a user can view any of 10 cameras placed throughout the store or play back tape recordings of these cameras. The game culminates in a simulation of an editing system, where a user edits the tapes into a proof of Eddy's innocence.

HyperViewKit
Pictorial file and database navigation with HyperCard
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.5 or later.

Viewing a digital pictorial file is a prime use of digital output. The HyperViewKit data viewer set consists of four HyperCard applications. HyperViewKit can be used to display, collate and print a collection of digital images. The QuickView pictorial display stack is particularly useful. QuickView is simple to use, can handle very large PICT graphic files and allows smooth, easy-on-the-eye roaming. QuickOrganize lets users build a hierarchical representation of linkages between members of a collection of related images. QuickBrowse stacks are created by compiling a QuickOrganize tree. QuickBrowse stacks can be used as stand-alone applications for navigating and viewing sets of inter-related pictorial information.
$85 retail; or bundled at no extra cost with MAP II V1.5

ImageAXS
Catalogs, retrieves and displays still and moving pictures
Macintosh with 68020, 68030 or 68040 processor; 8 MB of RAM; QuickTime; System 6.0.5 or later.

ImageAXS is an imagebase application for cataloging, retrieving and displaying still and moving pictures. Users can create as many ImageAXS collections as they like; each can contain more than 32,000 records from diverse file formats and creator applications. The original files can be stored anywhere — on a local hard drive, removable media, magneto-optical disks, CD-ROMs or Photo CDs, or on remote volumes like servers or networked storage devices. ImageAXS automatically selects the best display quality (including a special window for interlaced HDTV monitors), depending on hardware. Every view, including thumbnails and text lists, info sheets and full images, can be configured on the fly to display in just a corner of the screen or on all the available screen real estate, even on more than one monitor. If the file is online, simply double-clicking on the thumbnail displays the original image file (or, in the case of PostScript files, a PICT preview of it) regardless of size, location or format. There is no need to launch another application to view it. Automatic tiling and slideshows are built in.

The Incredible Sound Machine
Provides users with everything they need to know about Macintosh sound; book/disk package
Macintosh Plus or larger (one program requires a 68020 chip); 2 MB of RAM; hard disk drive; System 6.0.5 or later.

The Incredible Sound Machine, a book/disk package by Mark Andrews, provides users with everything they need to know about Macintosh sound. Whether users own a bare-bones Macintosh Plus or a Macintosh Quadra system with a $3,000 sound board, this book will show them how to make the best use of all the sound-producing ability their system offers. Perhaps the best application on the disk accompanying the book is a full-working version of SoundWave, a sound editor from Macromedia. For music buffs, this book includes a special musical demo training version of Listen from Imaja Software that teaches users to play an on-screen keyboard synthesizer and fret board. With the Songworks demo from Ars Nova Software, users can compose musical scores on the Macintosh. More than just software, this book provides a foundation on how sound works on the Macintosh, as well as a crash course in music theory. Power users, as well as programmers will benefit from this well-constructed book/disk package.

Instant Buttons & Controls CD-ROM 2.0
Buttons and controls to create multimedia presentations, kiosks, training programs and more
Macintosh LC or larger; 5 MB of RAM; Macromedia Director 3.1 or 4.0; System 6.0.7 or later; CD-ROM drive.

Designed for Macromedia Director users and applications that import PICT or QuickTime file formats, IB&C contains more than 500 buttons and controls, enough to satisfy even the most discerning of interactive developers. IB&C 2.0 follows on the heels of Macromedia's release of Director 4.0 for Windows. The new version includes the updated version of 1.0, plus more than 100 new buttons, new control systems, on-screen keyboards, a "button maker," new button sound files, new backgrounds, new QuickTime movies and even more robust, transparent scripting for easy, realistic implementation.

Intelligent System Controller
Solves the problem of video and audio distribution
Any Macintosh; System 6.0.4 or later (System 7.0 recommended).

Intelligent System Controller (ISC) is software that solves the problem of video and audio distribution using an intuitive graphic interface that is easy to learn and use. The ISC allows users to switch among dissimilar video sources by automatically reconfiguring printers or projectors to correctly accommodate the various video characteristics. This ensures that the highest quality image is displayed or printed. Features include control of video/audio switch matrices of up to 256 inputs and 256 outputs; single or multiple points of control via LAN or serial connections; two-level password access selectable at user option; user-definable icons for each device on the switch; 20 user-definable switch presets available via the menu or command key; and easy adaptability to future switch upgrades.

The Interactive Brainwave Visual Analyzer
Input tool for hypermedia, multimedia and virtual reality
Macintosh Classic or larger; 2 MB of RAM (4 MB for color); hard disk drive; System 6.0.7 or later.

The Interactive Brainwave Visual Analyzer (IBVA) is a state-of-the-art electroencephalograph (EEG) and biofeedback system. The IBVA hardware consists of a headband transmitter and a receiver. The brainwave data from the headband is transmitted via radio signal or direct wire connection to the receiver. The data is then processed by the IBVA software into digital signals that the computer can understand. The software is then capable of displaying these signals in an easy-to-read 3-D graph or a standard EEG read out. The IBVA software can also use these signals to communicate with other software, computers or MIDI equipment. The transmitter is wireless for hands-free operation and can also be used to record brainwave data on any standard recordable magnetic medium, such as a camcorder or walkman, allowing remote on-site research or performance capabilities without the need of cumbersome computer equipment.

Kaleidoscope 1.0
Fractal art generator
Macintosh LC or later; 68020 CPU or later; 68881 FPU or later; System 6.0 or later.

Kaleidoscope invites users to explore the mysterious Mandelbrot Set — an endless new world of stunning color images. Users can zoom in to see infinite detail, animate the colors for dazzling screen displays (and give themselves a break from the same old screen saver) or generate an endless supply of unique pictures for use as wallpaper, illustrations and fractal clip art (or commercially print to make stunning posters).
$49 retail
Abbott Systems, Inc.; 62 Mountain Rd.; Pleasantville, NY 10570; 914-747-4171, 800-552-9157 or 914-747-9115 (fax)

Kodak Shoebox Photo CD Image Manager
Lets users manage thousands of images, QuickTime movies and audio files
Macintosh II or larger; 4 MB of RAM (8 MB preferred); 1.5 MB of disk space (30 MB of disk space for loading full-resolution Photo CD images); System 6.0.5 or later; CD-ROM XA Mode 2, Form 1 drive for use of Photo CD images.

Kodak Shoebox Image Manager Software lets users manage thousands of images, as well as QuickTime movies and audio files. The catalog contains thumbnail images from a Photo CD Master disc, Photo CD Catalog disc or other image files, along with index data and pointers to the actual image file. Whichever users choose, the software makes it easy to catalog, index and search. Features include: index, catalog and search thousands of files by user-defined fields, along with key words, attributes and captions; access Photo CD images in any of five different resolutions — from thumbnail resolution for selecting and previewing images to full-detail resolution for photographic-quality resolution printing and enlargement; reduce keystrokes (update multiple records in one operation); copy files between catalogs (save project catalogs); zoom and crop images; copy, print or export image files to other applications; customize contact sheets by adjusting size of thumbnails, brightness and background color of contact sheet; and choose from three on-screen languages (English, French and German).
$245 retail

Kroy Sign Studio II
Sign-making software
Macintosh Plus or larger.

Kroy Sign Studio II is an in-house sign updating system that includes hundreds of formatted standard sign templates that can be easily modified for custom needs. Graphic templates allow users to create signs combining text and graphics. The program comes with a library containing more than 32 multinational symbols. High-resolution graphics, such as company logos, can be imported. Using the Kroy Color Plus, the laser printed signs can be colorized to match a wide variety of interior offices and buildings.
$349 retail
Kroy Sign Systems; 14555 N. Hayden Rd.; Scottsdale, AZ 85260; 602-948-2222, 800-733-5769 or 602-951-7033 (fax)

Kudo Image Browser 1.1
Mixed-media cataloging, browsing and retrieval tool
Macintosh SE/30, II or larger; 4 MB of RAM; 2 MB of free hard disk space; System 6.0 or later.

Kudo Image Browser is a mixed-media cataloging, browsing and retrieval tool that helps desktop publishers, graphic artists and multimedia producers manage collections of graphics, illustrations, clip art libraries, scanned photos, QuickTime movies, Kodak Photo CD images and sound files. A Kudo catalog holds up to 134,000 thumbnail entries that reference files stored on the local hard drive, across the network or on removable media, such as CDs. Files can be cataloged by simply dragging and dropping a file icon, a hard drive or an entire server onto the Kudo icon. The contents are immediately ready to search and retrieve. Kudo Image Browser supports most standard Macintosh file formats, including PICT, TIFF, EPSF, QuickTime and SND. It also catalogs several proprietary formats, including Scitex CT, Adobe Photoshop, Kodak Photo CD, Aldus FreeHand 3.11 and CompuServe's GIF, as well as PC formats, such as BMP and PCX. Also, file format translators use the Claris XTND API, so XTND-aware applications can recognize all image formats supported by Kudo Image Browser.
$195 retail
Imspace Systems Corp.; 2665 Ariane Dr., Ste. 207; San Diego, CA 92117; 619-272-2600, 619-272-4292 (fax) or 619-272-3420 (BBS)

Laser Award Maker
Customized awards and certificates
Macintosh Plus or larger; 1 MB of RAM.

Laser Award Maker allows a user to produce custom designed certificates, notices, awards, diplomas, announcements, tickets, invitations and coupons. The software offers seven categories: business, community, education, signs and notices, personal, sports and general. A user may select several document sizes, vertical or horizontal formats, 20 borders and four font styles, and prewritten text that can be edited.

Laser Award Maker's Education Library provides 48 additional templates to the Laser Award Maker program. The new templates include Track, Wrestling, Cheerleading, Computer, Reading, Gymnastics, Science, Bus Driver, Yearbook and many more. The Education Library will also allow users to use Baudville's two-up border paper on 21 of the new templates.

Laser Award Maker's Border Library provides 10 additional borders to the Laser Award Maker program. The new borders consist of Hearts, Dove, Shells, Theater, Patriotic, Christmas, Sneakers, Art Deco, Ribbon and Rope.

Logos On-Line
Custom logos and signatures as fonts or graphics
Macintosh 512K or larger; PostScript or TrueType printer or any printer and ATM.

Users can add high-quality logos and signatures to documents and presentations as an integral part of the desktop publishing process — without scanning and without paste-ups. Logos On-Line gives users a technically-drawn rendition of their logo or signature, accessible as a PostScript or TrueType font. Users can select a logo from Software Complement's line of national companies, or have their own logo customized. System 7 is supported. Cross platform formats are available for PCs, NeXTSTEP, Sun, Unix and mini/mainframes.
$150 starting price retail
Software Complement; 8 Pennsylvania Ave.; Matamoras, PA 18336; 717-491-2492 or 717-491-2443 (fax)

Mac-A-Mug
Human face composition
Macintosh 512K or larger.

Mac-A-Mug allows a user to create thousands of human faces by scrolling through and choosing from hundreds of individual facial features. The program assembles chosen features into a composite face, according to specifications given by a user. The disks contain both male and female facial features and accessories and the capability of mixing the two. Users control every aspect of creating a face, including hairstyle and color, and they may print out a face in a number of sizes or copy it into MacPaint for further refinement.

MacSignMaker
Sign manufacturing
Macintosh II family or larger.

MacSignMaker is a full-featured commercial graphics system for use in manufacturing signs using vinyl, pounce patterns, neon patterns and silkscreens. It accepts files generated by most input devices, including scanners, and takes in artwork in TIFF, MacPaint, PICT and PostScript format. Editing features include complete editing control of automatically formed graphics outlines, as well as text. Distortion, Inline/Outline and other features are included, and users can produce artwork of any practical size with material of any width. Proof copies of the artwork can be output on a printer. Most of the plotters and some routers on the market are supported. MacSignMaker is compatible with System 6 and 7. Software updates are free for the first year. The system comes with training materials, including a video tape.

Media Cataloger
Manages graphics, movie and sound files
Macintosh LC or larger; 4 MB of RAM; System 7.

The Media Cataloger is a stand-alone application that manages graphics, movie and sound files. The product solves the problem of organizing, finding and retrieving these files for use in other applications. The Media Cataloger allows users to create visual catalogs of files and attach key words to objects. Once a catalog is created, the product can quickly search for and retrieve files based on criteria defined by a user.

Interactive Media Corp.; PO Box 0089; Los Altos, CA 94023; 415-948-0745

MediaTree
Media organization tool
Macintosh Classic or larger; System 7; QuickTime recommended.

MediaTree helps users regain control over growing libraries of pictures, sounds, QuickTime movies and text. It combines a powerful outliner with a multimedia database that can manage data without duplicating it. Arranging information in an outline enables users to organize information according to any desired hierarchy of categories. The outline also helps to organize information for presentations. Each media item can appear in as many places and in as many outlines as desired. Users control the displayed depth of topic nesting, momentarily hiding unneeded details to reduce clutter on the screen. A single MediaTree document can organize and access the media in entire libraries of CD-ROMs. Its outline view includes a thumbnail sketch of each item and will produce the original if a user double clicks. If the item is not online, MediaTree will indicate which disk to mount.

MegaLogo
Multimedia trademarks and symbols database
Macintosh Plus or larger; System 6.0.7 or later.

MegaLogo "Top Symbols and Trademarks of the World" is a multimedia database that gathers and organizes a selection of 8,113 symbols and business trademarks of associations and service entities that were conceived by 1,000 designers in 47 countries, from 1945 to 1982. The trademarks are cataloged with 16 descriptive keys like: Identification Data, Business Area, Business Activity, Shape, Geometric Elements, Letters/Words, Figures, Group, Category and Graphical Effects. MegaLogo is developed for the Macintosh environment in three languages, English, French and Italian, and each command is supported with vocal helps. Each trademark has been scanned and then retouched by hand to provide the highest-quality projection on screen as is on print (300 dpi, PICT format).

Metrics
Weights and measures conversion application
Macintosh Plus or larger; System 6.0.3 or later.

Metrics is a utility application that converts numbers between various systems and units of measurement, such as feet to meters, pints to liters, square kilometers to square feet, etc. The major conversion categories include linear measurement (length), liquid measurement, area, volume, troy weight, avoirdupois (standard) weight, recipe, speed, temperature and time. Data may be shared between Metrics and other applications by using the copy and paste features of the program. Metrics is compatible with both System 6 and 7 and will work with the keypad, as well as the standard number row on all Macintosh keyboards.

MovieProducer
Allows users to create, manipulate and edit QuickTime movies
Macintosh II family; System 6.0.5 or later.

MovieProducer is an integrated hardware/software solution to create, manipulate and edit QuickTime movies. With the hardware, users acquire QuickTime movies into any application that supports video digitizer components. MovieProducer captures video frames in 24-bit color, which are compressed by QuickTime. The resulting movies are then available for editing. MovieProducer accepts input from video cameras, VCRs and camcorders. The software combines powerful digital video technology with a very friendly user interface. Besides recording video on the hard disk, the software catalogs the footage, arranges video segments into sequences, applies filtering and various transition effects and allows the incorporation of screen shots from other applications. In summary, the software lets users create and compose a presentation that combines video, text, graphics and animation.

Multi-Ad Search 2.0
Image cataloging and retrieval system
Macintosh Plus or larger; 2 MB of RAM; System 6.0.3 or later.

Multi-Ad Search is an innovative graphics database that allows users to catalog and retrieve Macintosh-based graphics. Search 2.0 provides the ability to open Version 1.0 files and offers virtually unlimited potential with 160,000+ records per catalog, as well as faster search times due to a new database engine. With a totally redesigned interface, Search 2.0 is 32-bit clean with Help Balloons and allows users to open and/or search multiple catalogs and print text lists and catalogs. This version supports popular Macintosh graphic formats, including Multi-Ad Creator file formats.

Portfolio
Database that stores typeset-quality graphics
Macintosh Plus or larger; 4 MB of RAM; hard disk drive.

Portfolio is a database program that lets users store thousands of typeset-quality PICT Paint, EPS and TIFF graphics. Any graphic that can be copied to the Clipboard can be saved in Portfolio. Each entry is displayed as a thumbnail in the viewfinder. Users can adjust the viewfinder to display any number of graphics at one time. Users can search for graphics by name or browse through the collection at any speed. Entries may also have more than one name. Portfolio databases can reside on an individual computer or on a network server. The server database can be edited simultaneously from any workstation. Portfolio is System 7 compatible.

PosterWorks
Color large-format production
Macintosh II or larger; 2 MB of RAM; 20 MB hard disk drive; System 6.0.3 or later.

PosterWorks enables users to create layouts up to 10,000 square feet, tiled for output on any PostScript printer or at a PosterWorks Large-Format Service Bureau. The program is capable of generating point-of-purchase displays, posters, tradeshow exhibits, theatrical backdrops and billboards. PosterWorks offers many unique production controls, including tools for configuring layout size, varying panel size, gap between panels, overlap and printer calibration. Artwork is imported in EPS, TIFF and Scitex format. Version 3.0 ships with a complete library of predesigned templates.

PosterWorks Bureau Edition offers all the capabilities of PosterWorks, with further enhancements designed specifically for users operating large-format printers in a service environment. The Bureau Edition adds densitometer-controlled color calibration, hardware acceleration, support for client/service job files and picture replacement.

QuickColor
Allows users to color their HyperCard stacks with pictures, colors or both
Macintosh LC or larger; 4 MB of RAM; hard disk drive; HyperCard 2.1 or later.

QuickColor allows users to color their HyperCard stacks with pictures, colors or both, with no programming or scripting needed. Adding color to buttons or fields or adding color pictures to cards has never been easier. By simply pointing and clicking, users choose a picture or color, or blend a picture with a color. QuickColor then adds all the necessary script to a user's cards. Users can color as many buttons and fields on a card as they wish and they can add color at any time. QuickColor also allows users to add picture files to their stack as resources and remove any picture resources in their stack. The software allows users to mix a picture image and a color, chosen from the color picker wheel, in 15 different combinations. The QuickColor package includes: QuickColor, Color Presentation Ideas and QuickColor User Guide.

QuickFlix!
Personal movie-making software
Macintosh LC or larger; 3 MB of RAM; QuickTime (included).

QuickFlix! is a movie-making tool for everyone. It is inexpensive yet powerful enough to build "real" QuickTime movies for business presentations, education, CD-ROM or just for fun. QuickFlix! and QuickTime provide true Personal Movie Making Software for all Macintosh users, including entry level machines that do not have acceleration hardware. QuickFlix! contains everything users need to produce their own movies, including digitizing, editing, basic special effects, sound editing, titling, layering and motion control — all in an easy-to-use interface that allows users to use their Macintosh skills to start making movies right away. It allow users to record movies, edit them, and add sound, titles or special effects like layering and motion control. QuickFlix! is an easy-to-use interface that allows users to use their Macintosh skills to start making movies right away. QuickFlix! includes optimized support for the Power Macintosh to greatly reduce rendering times.

Resource Library Vol. I
Collection of public domain color pictures and QuickTime movies
Macintosh LC or larger; 2 MB of RAM; System 6.0.7 or later; CD-ROM drive; QuickTime to run movies and display QuickTime compressed pictures.

Resource Library Vol. I compact disc provides video-quality pictures and QuickTime movies, all public domain. The contents are aimed at a general audience. Users can use them freely as they would any clip media by simply copying and pasting them into documents. Subjects include Animals, Environment, Farms & Ranches, People, Plants, Scenes, Space, Weather and Wild Caves. The CD-ROM includes more than 550 video-quality, full-color (24-bit) pictures; compressed pictures; more than 60 QuickTime video color movies; and a HyperCard stack for navigating through the pictures and movies. An area on the HyperCard stack is available for users to add their own notes. A Find feature allows users to search through the information contained in the stack.

Resource Navigator II
Allows users to create, edit and play back multiple media types in HyperCard stacks with no programming or scripting
Macintosh LC or larger; 2 MB of RAM (4 MB with QuickTime); hard disk drive; HyperCard 2.1; QuickTime (to run movies and display QuickTime compressed pictures); System 6.0.7 or later.

With Resource Navigator II, users can create, edit and play back multiple media types, including QuickTime movies, in HyperCard stacks with no programming or scripting needed. Adding pictures, sounds, audio compact disc music, external videodisc sequences and QuickTime pictures and movies is easier than ever. If users have a video/frame capture board, they can create their own QuickTime movies and use them in any QuickTime-capable application. By simply pointing and clicking, users create HyperCard buttons that contain all the commands needed to access these different types of media. The Resource Navigator II package includes: Resource Navigator II (authoring tools to integrate various types of media into any HyperCard stack), Resource Library (stacks to store media buttons), Presentation Ideas, ClipScripts (a collection of both typical and common scripts users can copy and paste into their stacks) and QuickTime

Sound Bytes Developer's Kit
Speech synthesis software
Macintosh SE/30 or II family; 2 MB of RAM; System 7.0.

Sound Bytes converts unrestricted English text (ASCII) into understandable speech on a sentence level. The built-in capability of understanding a sentence or phrase gives the synthesized female voice natural rhythm and phrasing. Sound Bytes offers text-to-speech synthesis on a disk. No digital signal processing chip is needed. The program has an unlimited vocabulary. The Developer's Kit is provided as a library of subroutines callable from C that can be linked to a variety of applications requiring voice output, including multimedia integration, reading E-mail and accessing databases remotely by phone. It is compatible with all Apple speech standards.

■ TEC Movies
Provides seamless QuickTime movie management for 4th Dimension
Macintosh Plus or larger; System 7.0 or later; 4th Dimension 2.2.3 or later; hard disk drive recommended.

TEC Movies provides users with seamless QuickTime movie management for 4th Dimension database applications. Users can manage volumes of movies that require a database application and TEC Movies provides the extra functions required to make the movie management tool ideal. TEC Movies is a 4th Dimension module that is easy to incorporate with any database. Users simply draw a TEC Movies area on a layout and TEC Movies will automatically store the movie references with the record. TEC Movies allows users to incorporate existing movies into their database, edit movies, create new movies through editing and create new movies by building the movie from pictures stored in their database.
$100 per user retail

Thumbs Up
Image database
Macintosh II or larger; 8 MB of RAM; 80 MB hard disk drive; System 7.0 or later; QuickTime.

Thumbs Up is a system for organizing, cataloging and viewing visual information of all kinds. Thumbs Up can significantly heighten productivity and enhance the effectiveness of professionals who make use of images or depend on visual information in their field of practice. Thumbs Up offers the following benefits: locates media resources in seconds; stores gigabytes affordably; controls access at multiple levels; and sends media resource files quickly. Thumbs Up incorporates the JPEG standard for compression of continuous tone still images to provide outstanding speed in this archive database. The program was designed to perform at high speed over a network. Capable of archiving millions of images, the database contains more than 100 alphanumeric fields for cataloging each image, a thumbnail of the image and pointers in the form of pathnames to a network resolution version of the image, the high-resolution version of the image and a related QuickTime audio, video or animation file. Because the actual media resource file does not reside in the database, searches and displays of multiple thumbnail images occur quickly, allowing for quick visual searches of similar images. Thumbs Up shuttles a compressed version of the image when users double-click on a thumbnail of the desired image. The image is then decompressed on the fly via Storm Technologies JPEG code or accelerated by the Storm Technology PhotoFlash (or SuperMac ThunderStorm) image processing board. This gives the ability to view a full-color, full-screen (640 by 480), photographic-quality image two to three seconds after selecting a thumbnail image for viewing.
$995 retail; single user
$9,995 retail; multiuser (includes client/server network version of Thumbs Up, 10-user license, one year of toll-free telephone support)
$695 retail; Storm Technology PhotoFlash image compression board (required)

Virtus VR
Virtual reality for the desktop
Macintosh II or larger or Power Macintosh; 8 MB of RAM; System 7.1 or later.

Virtus VR is a 3-D modeling program that features an intuitive "drag and drop" approach to world creation. This method of object-oriented drawing allows users to choose 3-D shapes, from galleries supplied with the program, to build more complex objects and structures. The Virtus VR features one cubic miles of cyberspace, construction and navigation tools, galleries of 3-D objects that can be added to any Vitrus VR environment and six pre-built scenes that illustrate the program modeling, texture-mapping and real-time "walk-through" capabilities. It is also supplemented by an on-going series of add-on galleries that greatly cut down on modeling time by providing commonly used, pre-constructed 3-D objects that bring life to virtual worlds.

Database Management

1stBase-II
Automated, programmable relational database
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.

Users can create files of their own design, enter and edit data, sort multiple fields and produce reports from single or relationally-joined files. 1stBase-II features macro programming, 40+ functions that allow arithmetic computing with function analysis on up to 100 derived fields using If-THEN-ELSE logical arguments. Up to five-across labels and simple mail-merge functions are supported. Reports with multiple line headings can include up to 100 derived fields and can be saved as text. Featuring ease of use and setup, 1stBase-II supports up to two billion records, blueprint lockout, time and date calculations, 255 characters per field and 255 fields per record. 1stBase-II allows custom user interfaces in 1stVue II or HyperCard. 1stBase-II macros are saved as documents at the Finder to allow 1stBase-II automated processes to be run from HyperCard. Users can simplify complex business functions to a click of the mouse.

1stVue II
Form completion and multiuser database
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.

1stVue II provides the tools required for users to set up applications via forms and files. 1stVue is a form completion and multiuser database that includes a unique graphic forms interface with multimedia capability. It is designed for use with 1stBase-II, a relational database and report generator. By using 1stVue II with optional DataModeler and 1stBBS-II, users can create a form with 1stVue II and send it to customers with 1stBBS-II. Customers then fill out the form with DataModeler and send it back with the files attached using 1stBBS-II. Clairvoyant Posting gives users the ability to simply open the form with 1stVue and customers' data is automatically added to the database. Customers view their orders with 1stBBS-II's database lookup feature. 1stVue II features patented Fuzzy Find over weighted fields and MacroAccess Command icon system automation. 1stVue II supports 12 different kinds of data filters, including documents, sounds, pictures and QuickTime movies. The 1stVue II database is automatically generated based on the form's attributes. 1stVue II's numerous display and entry filters provide users with an efficient way of entering and displaying all of their business information. It is System 7 compatible.

4th Dimension 3.0
Relational database
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.3 or later.

4th Dimension is a relational database that is fast, powerful, easy to learn and easy to use. It enables users to quickly create personalized systems. 4th Dimension has its own built-in, pre-emptive, multitasking system. With this system, even casual users can import data, print reports and design forms simultaneously — all without programming. And, 4th Dimension keeps pace with a user's needs as they grow in complexity and size. It features an extensive programming language, automatic button scripting, multipage layout and easy-to-use procedures. 4th Dimension databases can be used in multiuser mode without modification by utilizing 4D Server, ACI's native client/server architecture for 4th Dimension.

ACI also offers integrated application modules for 4th Dimension: 4D Draw, an object-oriented drawing module; 4D Calc, a spreadsheet module; Graph 3D, a full-featured graphics module; 4D Write, a word processing module; 4D D.A.L., an extension that allows access to data servers on minicomputers and mainframes; 4D SQL Server, provides an interface to SyBase SQL server databases residing on host computers; 4D External Kit, allows developers to add new capabilities (extensions) to 4th Dimension; and 4D Compiler, translates procedures and scripts from 4th Dimension database applications into assembly-level instructions.

BrioPublish
Database publishing tool for FrameMaker 4
Macintosh Plus or larger; 2.5 MB of RAM; System 7.0 or later.

BrioPublish is a database publishing tool for FrameMaker 4. One of the first API Clients developed exclusively for FrameMaker 4, BrioPublish delivers data straight from corporate databases into a fully-formatted and designed FrameMaker publication. BrioPublish's querying capability provides features and a user interface that simultaneously satisfy IS concerns and invite end-user data access. Even non-technical users can employ BrioPublish to access their host data. A simple click and drag interface replaces the need to know SQL. BrioPublish's graphical representation of tables and columns is an easy introduction to database access. BrioPublish employs familiar FrameMaker features, therefore FrameMaker users will find it easy to incorporate information from their database into their Frame documents. Reusable BrioPublish templates retain formats and styles and make data updating completely automatic. In addition, BrioPublish preserves all FrameMaker elements in the database document, therefore the resulting document inherits a professional quality not usually found in database reports. BrioPublish accesses most major databases. Examples include Oracle, Sybase, Informix, Ingres, DAL, DB2 and more.

Butler
Multiuser database server and relational database management system
Macintosh Plus or larger; System 7.0 or later.

Butler is a feature-rich, multiuser database server and relational database management system. It is a client-server database for the Macintosh OS that supports Apple's Data Access Language (DAL). Because Butler uses client-server technology, users send only small text (SQL-like) commands across the network to request data. The Butler server performs any necessary processing and sends back the results. A wide variety of applications support access to DAL servers and, therefore, to Butler. These include Microsoft Excel, Resolve, HyperCard, 4th Dimension, Omnis 7, DataPrism, GQL and ClearAccess. In addition, developers can write their own applications using C, Pascal, Prograph, Serius and other lower-level languages. Butler supports numerous data types, allowing users to store pictures, sounds, QuickTime movies and Macintosh documents, along with standard text and numeric data. Clients can access the Butler server using System 7's program linking or through the Communications Toolbox (modem, ADSP, etc.).

ClearAccess
Queries/updates host data
Macintosh Plus or larger; 1 MB of RAM; System 6.2 or later.

ClearAccess is a Macintosh and Windows application that provides powerful and flexible data access services to corporate end users, information system developers and other applications. With ClearAccess, an organization can have a single, consistent interface to all of its corporate data. Using a simple, graphical interface, ClearAccess allows users to create SQL-type queries to most relational databases by just pointing and clicking on the data items they want. Queries can then be recorded as scripts while they are being executed, then saved anywhere on the network and run by other users from their own workstations. Query results can be automatically moved into any other application for further analysis and manipulation, even providing upload capability. ClearAccess can be integrated into the macro facilities of other Macintosh applications, such as Microsoft Excel, Informix Wingz and Full Impact spreadsheets, HyperCard and 4th Dimension. In this way, complete turnkey client/server applications can be created, without requiring developers to master the complexities of SQL, networks or data server operating systems. ClearAccess makes host-based data access a natural and transparent part of a user's experience, connecting them to a wide variety of corporate databases in a straightforward, uniform manner. Also included is ClearReports, a sophisticated, graphical report generator.

ClearManager
Enables database managers to control data access
Macintosh Plus or larger; System 7.0 or later.

ClearManager allows database managers to control data access, which means controlling the clients in client/server systems. It allows users to know what is going on with their database, who's connected to it and what they are doing. ClearManager also has the power to do something about it, being able to set all access permissions intelligently. It enables users to keep track of every database access; find out how many users are connected, how long they have been connected and what queries are in progress; review histories of data access; control what users of ClearAccess on the network can do; allow or disallow any database command for single user, group or all users; submit queries for later execution; see which commands are queued, change the order or delete them, notifying the user; catalog server — tell users about the database, create custom catalogs with table and column names, easy to read alias, join, primary and foreign key and more; pre-define "table groups" so users don't have to wade through dozens (or hundreds) of tables; and script server allows users to share libraries of ClearScripts.
$4,500 retail; per Administration Module
ClearAccess Corp.; 200 W. Lowe; Fairfield, IA 52556; 515-472-7077, 800-522-4252 or 515-472-7198 (fax)

DAtabase
Database desk accessory
Macintosh 512KE or larger; System 5.0 or later.

DAtabase is a full-featured database desk accessory that can file all types of materials, including color pictures, multifont text, calculated figures and more. The program simplifies importing by automatically creating DAtabase files from text files and other formats with selective field importation. It also provides calculation fields to process forms and financial figures. Features include: three-level password protection on each file; time and date stamping on each record; fully variable window sizes for data files; detailed reporting with multiple rule-based searches; global or field specific find; sophisticated art grabber for pictures with both marquee and lasso; marking capability on selected records; auto copy of complete records; flexible exportation; extension printing options; telephone dialing; multiple picture fields per record; online help; color and font control of fields and text; innovative check box and pop-up fields; and HyperCard-like background graphics and border types.
$129.95 retail

DataEdit
Client/server application construction kit for building online applications
Macintosh Plus or larger; 5 MB of RAM; System 7.0 or later.

DataEdit is a complete client/server application construction kit for building online applications with a forms-based user interface. It requires no programming of window events or hard-coded SQL. DataEdit includes a full GUI-specification layer above a unique automatic SQL engine. This design enables rapid prototyping of client/server database applications in days, not months. All IS organizations that need to capture data directly into SQL databases can use DataEdit immediately to reduce the backlog of departmental and group applications. DataEdit accesses all major SQL databases transparently, including: Butler, DB2, Informix, Ingres, NetWare SQL, Oracle, SQL Server and Rdb. Connectivity software supported includes Apple's Data Access Language (DAL), Open Client, SQL*Net and SequeLink.
$999 retail
Brio Technology, Inc.; 444 Castro St., Ste. 700; Mountain View, CA 94041; 800-486-2746 or 415-961-4572 (fax)

DataPrism 2.1
Ad hoc query tool
*Macintosh Plus or larger; 2 MB of RAM; access to SQL database through DAL, SQL*Net, Open Client, EDA/SQL or SequeLink; System 6.0.7 or later.*

DataPrism is a database query tool that enables Macintosh users to copy data from remote databases into spreadsheets, word processors and charting programs without programming. DataPrism fulfills the promise of client-server computing; it taps into mainframe databases and then provides local processing for quick analysis. With System 7, DataPrism automatically links current data with spreadsheets, word processors or charting programs — reports reflect new data instantly. DataPrism has a unique visual data model that enables analysts to build queries without relying on database experts. It previews actual contents of database tables, lists valid constraint choices, joins tables automatically and runs in the background during extended processing. With its full-featured user interface, interactive reporting and complete export capabilities, DataPrism supports the entire analytic process, from raw data to meaningful results. DataPrism connects to all servers supported by Apple's Data Access Language, Oracle database servers, Sybase servers through Open Client and all database management systems via SequeLink and EDA/SQL.

dBman V
Relational database that is command compatible with dBase III Plus
Macintosh Plus or larger; 1 MB of RAM.

dBman V is a dBase III Plus-compatible relational database management system that allows most dBase applications from PC DOS to run with no change on the Macintosh or Apple A/UX. Applications written in dBman V are fully portable to more than 40 platforms, including Macintosh OS, A/UX, PC DOS, LAN, Unix, Xenix, AIX, Sun, DEC and mainframes. dBman V features more than 130 enhanced and powerful commands and functions over dBase II Plus that reduces code size considerably. It includes scrollable windows, menus, UDFs, multidimensional arrays, file and record locking, data encryption and protection at field level and more. dBman V includes a relational report generator that creates complex reports without programming. It creates columnar or multiline reports, such as sales analysis, invoices, statements and inventory control sheets. Report layouts are designed on screen in "bands" and fields can be moved, copied, deleted and added by simple keystrokes. dBman V comes with a source-level debugger and allows users to set break point, single step and edit source code while debugging. dBman V includes a compiler that supports macros. Runtime is also available. Version 5.3 has many Clipper compatibility features. The A/UX allows an unlimited number of users. dBman V is System 6 and 7 compatible.

Eclipse
Advanced graphic tool to question SQL databases from Macintosh or PC Windows
Macintosh Plus or larger.

Eclipse provides an easy-to-use graphical way of querying SQL databases. Three levels are available: the administrator level (the highest level) — only the administrator can create, modify or erase "Universes" and "Users"; the developer level — can use the Universes that have been prepared by the administrator to create SQL requests and dialogs; and the user level — is only able to run the requests file created by the

developer. A Universes is a revamped view of a database and its tables. An Eclipse administrator creates one or several User accesses. A User access is either a developer or a user. One or several Universes can be associated to each created user. Eclipse includes the CI-Link API and DAM API (DAL, Sybase, Oracle). It is also able to create interactive query documents.

Empress Database Server
Provides the Empress RDBMS with fully distributed client server and multiserver architectures
Macintosh II; 2 MB of RAM; 9 MB of disk space; A/UX.
The Empress Database Server enables the Empress RDBMS to be fully distributed across a network of heterogeneous computers while appearing to users as if it were resident on their own system. Superior to traditional client/server implementations, Empress operates in a true peer-to-peer mode, eliminating the need to segregate clients from servers. Any system on the network can be designated as a client, a server or both, giving greater options to the network manager for load balancing and applications design. As a result, applications are more efficient and machine idle time is dramatically reduced. In addition, Empress does not require any specific network file system; it relies only on the TCP/IP protocol found on all standard networks. The Database Server even supports the 64-bit to 32-bit environment required for supercomputer to workstation peer-to-peer full database functionality. The Database Server is currently available for Unix, UNICOS and LynxOS.

Empress RDBMS
Relational database management system
Macintosh II; 2 MB of RAM; 9 MB of disk space; A/UX.
Empress RDBMS incorporates ANSI standard SQL, a C callable RDBMS kernel, a full-function report writer, a 4GL application generator with powerful windowing capabilities, Dynamic SQL and a complete set of productivity tools into one integrated environment. Offering advanced functionality, Empress delivers high-performance applications that can be prototyped, developed and executed in local or distributed environments. Some of the advanced technology in the Empress RDBMS is kernel-level access, X-Windows OSF/Motif support, fully distributed capability, variable length binary datatype for storing images, voice and text, 8-bit European datatype, 16-bit Kanji datatype, user-defined functions and much more.

Feedback For 4th Dimension
Streamlines the user-developer communication loop
Macintosh Plus or larger; 4th Dimension.
Feedback for 4th Dimension is a development productivity package that streamlines the user-developer communication loop by tracking the needs and problems of people using custom 4D applications. When the Feedback library is installed in any custom application, an easy-to-use feedback mechanism is available to the user. When the user activates Feedback, a feedback slip is created on which the user enters comments. Feedback also automatically profiles and attaches to the slip other relevant information, such as a current screen snapshot, a list of the user's previous actions and network activity. The feedback slips are stored in the database for export to Backtracker, a multiproject tracking system included with Feedback, which lets the developer review and track feedback slips in a variety of ways. Feedback can work in any existing 4D application without changing the logic or design of the application. It is fully compiler and multiuser compatible.

File Force 1.2.2
Data management for novices and experts
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.3 or later.
File Force provides data management for novices and experts. Users can employ templates or create a personalized system for entering data — even a mirror image of existing paperwork systems. Users can also do instant searches and sorts, rapid updates and quick and detailed columnar reports; create form letters and address labels with intuitive, built-in editors; and allow several users access to the same files simultaneously. For additional power, the system can be upgraded to 4th Dimension.

Filevision IV
Graphic database management system and drawing program
Macintosh Plus or larger; 1 MB of RAM; hard disk drive.
Filevision IV is a multilayer drawing program and an integrated database. Users can create a "real world" visual database that not only maintains records on a number of related objects, but also provides a large drawing page that includes symbols or actual images of those objects and their spacial relationships. Each of the drawing page objects can be attached to a database record. Filevision IV supports color; direct import of PICT, EPSF and MPNT graphics; a modifiable symbol table; import and export text files; and print page or a print library with report, form, label and mail merge form letter formats. A 154-page illustrated online context-sensitive help file and a 402-page illustrated manual are included to help users in setting up integrated imaging database files. Filevision IV is System 7 compatible.

GQL (Graphical Query Language)
Graphical query and reporting front-end to SQL databases
Macintosh with 2 MB of RAM; System 6.0 or later.
GQL (Graphical Query Language) provides a comprehensive, multiplatform solution to managing end user access to SQL database information. GQL's powerful family of tools enables information system professionals to quickly develop customized graphical data access environments for a wide range of users. GQL supports both executive push-button and ad hoc data analysis capabilities. The system provides transparent integration with popular applications, such as Microsoft Excel and Word, to enable developers to create cost-effective decision support systems. Graphic images (e.g., maps, photos, clip art) can be combined with GQL's prompting feature to provide a dynamic "drill-down" capability that enables users to easily access information. The current GQL family includes GQL/User, GQL/Admin, GQL/Update and GQL/Design. Networks supported include AppleTalk, Ethernet, TCP/IP, SQL/NET, Novell, DAL, SequeLink, DB-Library, LAT, Tandem 6530 and asynchronous.

Helix Express 2.0
Database management/workgroup development environment
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.5 or later (System 7 is required to take advantage of Publish and Subscribe and external document storage).
Helix Express, a relational, non-procedural and object-oriented groupware development environment, requires no programming language. Users can easily make programming changes at any time so a database can change and grow as their needs do. BLOB (Binary Large OBject) support allows users to store and retrieve documents within Helix Express and launch documents in their native applications. The Helix Express client/server technology provides true referential integrity. Changes made by any user will automatically update across the network in real time. Helix Express comes with Ready-to-Go Solutions, making it easy to manage everything from personal contacts to a whole business as soon as users open the box. Helix Express supports all models of Macintosh computers (Macintosh Plus or later). It is also compatible with AppleShare, MultiFinder, System 7 and 32-bit addressing and PowerPC. Registered owners of Helix Express receive free technical support. Training and consulting services, as well as the Helix Professional Developer Program, are also available.

ImporTool
Free-form to structured database formatting program
Macintosh Plus or larger; 4 MB of RAM; hard disk drive; HyperCard 2.1 or HyperCard Player; System 6.0.5 or later.

ImporTool is a utility for formatting data from any free-form data source (text files of all kinds, as well as popular contact managers, such as QuickDex, InTouch and HyperCard) for import into structured databases, such as TouchBase, Dynodex, EndNote, FileMaker, 4th Dimension, etc. A structured database provides many advantages — in particular the ability to sort and select data by different fields. But moving free-form data into a structured database has previously been a laborious, time-consuming chore. Using ImporTool's unique system, users can format the data in a remarkably fast and easy manner. The resulting formatted data is written to a text file that is structured especially for the target database. ImporTool supports several popular database programs, and its custom export capabilities can support virtually any database.

MediaBase
Allows users to collect, access and display multimedia information
Macintosh IIci; 4 MB of RAM; hard disk drive; System 7.

The MediaBase system provides an environment that allows users to easily and cost effectively collect, organize, access and display multimedia information. Subject context can be developed by manual input, or automatically developed from any external hierarchical structures. A subject context can consist of as many as 25 levels with the program providing path visibility through the context automatically. The media associated with any statement in the subject context is displayed simply by clicking or touching the subject statement. New media can be developed using any application program familiar to a user. External files can be remotely accessed over existing networks. Media storage is maintained separately from the context structure, so the files can be developed and maintained without impacting the MediaBase context structure. Linkages are easily integrated into the desired context using simple dialog boxes. Windows can be presized and multiple media forms presented concurrently. Individual media elements can be linked to one or more context statements or applications, insuring concurrency of data and reducing redundancy of files.
$1,995 retail; MediaBase Composer
$495 retail; MediaBase Presenter

Microsoft File 2.0
Data management program
Macintosh Plus or larger; two 800K disk drives or hard disk drive.

Microsoft File is a database that allows users to record, organize, manage, sort and report all kinds of information. In addition to dates, numbers and text, the program allows a user to store pictures created with MacPaint and MacDraw, and graphs created with Microsoft Chart and Excel. Data can be entered using a built-in List Helper, or users can custom design a format that best fits their use. Printed reports offer column totals, subtotals, averages, standard deviation, minimum/maximum ranges and more. Additionally, Microsoft File allows users to preview reports before they are printed. New to Version 2.0 include: more than 120 templates to make the program easier to use with preprinted forms; supports color capabilities of a Macintosh II; built-in List Helper and online, context-sensitive Help; supports custom-size paper and multi-column labels; memo fields for long text; computed field support for date fields; user-defined default value for field borders; and more.

Office Manager 3.0
Productivity and organization for small businesses
Macintosh SE/30 or larger; 2 MB of RAM; hard disk drive; System 6.0.5 or later.

Office Manager is an easy-to-use productivity program for small businesses that offers a unique combination of power, usefulness and simplicity. It gives users a productivity edge that speeds owners and managers of small businesses through routine tasks. Features include: a powerful address file; instant letters with built-in word processor; quick merges of standard letters; one-button envelope printing; address label printing by group; to-do list and have-done list; job tracking file with time and expense log; automatic telephone dialing; contact history for each address; faxing features; and unlimited sorting with user-defined keywords and categories. Office Manager can also synchronize its data with another Office Manager application on a second Macintosh, allowing data to be added or modified at either computer. A network is not required. The optional Mail Manager gives Office Manager added filtering capabilities when printing address labels or merge letters to groups of addresses. Mail Manager prevents accidental repeat-mailings by keeping track of who received a particular item — ideal for newsletters or promotional mailings. Office Manager can be linked to White Crow's OnAccount application for a complete communication and billing system.

Oracle For Macintosh 1.2
Transforms HyperCard into a full-function SQL database
Macintosh SE or II family; 2 MB of RAM; 6 MB of hard disk space; HyperCard 1.2 or later; System/Finder 6.0.2 or later.

Oracle for Macintosh combines Oracle's relational DBMS with Macintosh technology, allowing developers to create sophisticated and diverse Macintosh applications that access Oracle, DB2, SQL/DS or RMS data on more than 85 platforms. HyperCard developers may use Hyper*SQL, Oracle's interface to HyperCard and HyperCard-compatible products. Oracle's Pro*C precompiler lets developers create custom applications by embedding SQL within C programs. Oracle for Macintosh also includes a suite of HyperCard-based tools for end users. The Query Tool allows users to build queries graphically and then output the results to their favorite Macintosh applications.

Pablo
End-user reporting tool providing sophisticated information analysis and display
Macintosh with 2 MB of RAM; System 6.0 or later.

Pablo is a powerful end-user reporting tool for multi-dimensional summary information that provides a complete range of solutions for any client-server architecture. Developed by the makers of Andyne GQL, Pablo creates reports with table, charts and graphs from data sources called HyperCubes — a term that describes multidimensional tables of summary information. HyperCubes can be created by IS departments and maintained in relational databases, on desktops and on local servers. Pablo features include an intuitive graphical user interface, unique Data Navigator and View Builder tools for superior data navigation and data pivoting, user-defined calculations, report layout and drawing features and sorting capabilities.

Panorama II
Database manager
Macintosh Plus or larger.

Panorama is a database manager that combines the speed and simplicity of a spreadsheet with powerful form and database capabilities. The spreadsheet (row/column) format of Panorama is easy to understand and use. And like a spreadsheet, Panorama is spectacularly fast. Panorama lets a user open up to 25 windows at a time. In repetitive data fields the Clairvoyance feature will finish entering data after the first few identifying letters have been typed. It can turn an ordinary database into an outline with up to seven levels of detail, and Panorama's powerful drawing tools allow a user to create and modify complex forms and reports and more. Other features include: the ability to create mailing labels; the ability to change the size of several objects at once; the ability to tie data with pictures; a macro recorder; high-speed import/export; equations; password protection; automatic phone dialing; financial and time functions; support for EPSF pictures; additional chart options; the ability to store and play back sounds; and more.

Phyla
Object-oriented database
Macintosh Plus or larger; 2 MB of RAM; System 6.0 or later.

Phyla is an end-user object-oriented database. It is designed to collect, store, analyze and present complex information with ease. Phyla has the power of a relational database in a format that is as easy to use as a flat-file system. Users can relate information from a variety of sources, design and layout custom database forms and create complex search queries, all without programming. Phyla's natural, intuitive structure of objects and classes combined with a simple drag-and-drop interface make it both powerful and easy to use.

A Macintosh business agent that automatically performs hundreds of different tasks without the need for user intervention or supervision
Macintosh Plus or larger; 4 MB of RAM (5 MB recommended); System 7.0 or later.

PowerAgent automates time-consuming jobs by getting data from databases, automating database functions, such as generating reports and lists, and even transferring information from one program to another. Plus, users can schedule all of these jobs to run when they're not there. PowerAgent tasks let users send messages, retrieve data, run FileMaker Pro scripts and run AppleScripts. To completely automate these tasks, PowerAgent includes scheduling tools. Users can schedule tasks to run: when they turn the computer on or off; at a set time and date; every hour, day, week, month, etc., or when information changes.

P•INK SQL 2.0
DAL database server RDBMS
Macintosh Plus or larger.

P•INK SQL is a relational database management system based on the client/server principle. The DataServer runs on Macintosh, Unix or Windows platforms. P•INK SQL offers a database management toolbox and a high-performance data processing engine that developers can put behind their user interfaces. It administers the storage, organization, retrieval, analysis, modification and the reciprocal sharing of data — all within a relational framework. P•INK SQL complies with the ANSI/ISO SQL standard. It is also 100 percent compatible with Apple's DAL (Data Access Language) standard, meaning that any applications written for a DAL server can be linked to the P•INK SQL RDBMS.

Retriever II
Flat-file database
Macintosh Plus or larger; System 6.0.2 or later.

Retriever II is a completely rewritten successor to Exodus Software's flat-file database product, Retriever. Retriever II retains the ease of use of its predecessor, while incorporating powerful new features, including calculated and numeric fields, phone dialing and multi-level sorting, as well as the same easy-to-use icon-based interface. Retriever II has been designed to easily store, search and sort databases up to 16,000 records. It does not keep the entire file in memory, which makes it ideal for providing access to larger data files without typing up large amounts of available memory. Retriever II includes a powerful and flexible import and export capability. Files can be merged, even when the files contain a different number of files or the data is not arranged in the same order. Fields can also be merged, creating a single field from up to four original fields. Retriever II comes as both an application and desk accessory.

Super QuickDex
Free-form database desk accessory
Macintosh 512K or larger.

Super QuickDex is a four-utility package. QuickDex is a desktop accessory that allows quick location of any word, number, phrase or sentence on as many as eight card decks in memory at the same time. It automatically finds a phone number anywhere on the card that eliminates selecting specific fields before entering a phone number. The product supports modem and speaker autodialing and includes an area and Zip code database. PrintDex is a printing utility program that allows users to print either an entire card deck or new cards only. This utility includes predefined options for printing on a variety of standard card stock forms or users can select a custom form size. QuickElope is a fast, single envelope or label printing DA. HotDex with HotElope is a single INIT that can bring up utilities with single, user-defined keystrokes.

U.S. Map Templates For Filevision IV
State maps to the county level
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; Filevision IV.

The U.S. Map Templates consist of all 50 states to the county level (every county is a separate object within the state) plus a few cities for reference. A combined U.S. map and tutorial is also included that provides examples for demographic and thematic development of these maps. The Map Templates are supplied on two 800K disks and the package includes a 12-page user manual.

Decision Support Software

Beyond Breakeven
Break-even profitability and margin analysis
Macintosh Plus or larger; Excel.

Beyond Breakeven allows users to determine break-even costs of a company, break-even price of a product, break-even units or other break-even analyses. As volume changes, so does the break-even, but with Beyond Breakeven, users will know where they are and what they need. To make interpretation easy, results can be viewed graphically. The program is easy to use and provides a valuable service. It is important when embarking on a project or venture of any financial nature that a break-even analysis be conducted. This model allows users to perform this analysis and identify strengths and weaknesses by providing multiple side-by-side what-if analysis. Solution and scenario modeling help to automate the extensive what-if process.

BusinessObjects
Information access, analysis and reporting solution
Macintosh Plus or larger; 4 MB of RAM; 2 MB of free disk space.

BusinessObjects is the business-intelligent information access, analysis and reporting solution. It uniquely presents data to end users based on how they naturally think and work, using familiar business terms. This gives end users the autonomy they need to easily query, analyze and report on corporate data, eliminating the need for end users to struggle with the technical details of database structures or having to learn SQL. BusinessObjects also gives MIS departments the centralized capabilities they require to efficiently manage the data being accessed by end users. Using a central repository, BusinessObjects lets database administrators manage user access to data and administer resource utilization by preventing runaway queries.

The CEO's Strategic Planner
Financial decision support system for strategic planning
Macintosh Plus or larger; Microsoft Excel or equivalent spreadsheet; printer recommended.

The CEO's Strategic Planner allows the CEO of a company to do a total simulation of his or her company from a multidimensional perspective, including financial aspects, cash flow, profitability, human resource planning, detailed budget planning, product forecasting, new product development, manpower planning and facilities management planning and growth. Numerous variables are taken into account easily and automatically based on key assumptions of the CEO and his or her management team. Strategic aggressiveness levels in marketing and innovation can be matched with future industry turbulence and dynamics, as organizational capability is developed to match marketing and innovation requirements for optimal success. The system includes three advanced financial simulation models: CEO PRo that uses up to six years of historical performance to generate a five-year forecast of the income statement, balance sheet, two cash flow statements, seven business valuation analyses and an advanced financial analysis statement that includes seven key performance measures, manpower and space planning, growth potential analysis and venture capital analysis; CEOMOD allows a five-year simulation of the enterprise using about 245 potential variables; and CEOMIC is a twenty-four month short-term planning and simulation model that allows the CEO to obtain a microcosmos or microcrystal perception of the business enterprise. In addition, the system includes twenty other general interest model's and financial analysis programs with documentation.

Commander EIS
Client/server software for managerial applications
Host components run on IBM VM/CMS and MVS/TSO and on DEC VAX/VMS; workstation components run on Macintosh Plus or larger, Windows and OS/2.

Commander EIS delivers critical business data to managerial end users' personal computers in enterprise-wide applications. It features easy, intuitive access to Electronic Briefing Book, news and competitive information; "smart reporting" of defined exceptions; improves management productivity with mission-critical applications like profitability reporting, critical success factor reporting and total quality reporting; and dynamic data links to SQL databases and other data sources, including DB2, SQL/DS, and other popular DBMS. Builder tools offer point-and-click mode and expert mode for maximum productivity with ease of use. Command EIS supports Macintosh, Windows and LAN-based data reshaping facilities to transform raw data into usable information for managers; and provides application management facilities so IS can support growing user populations effectively in distributed client/server environment. Security is provided at all levels.
$1,500 per desktop retail

CrossTarget
Cross-platform, cross-departmental and cross-functional managerial support solution
Macintosh Plus or larger; 2 MB of RAM.

CrossTarget is a family of multidimensional analysis and reporting tools designed to provide executives and managers with the decision-making information needed to monitor current operations, review past and present performance, as well as effectively plan and forecast product/service profitability. CrossTarget is easy to set up and maintain on existing platforms, giving end users direct access to large amounts of information without relying on costly MIS resources. The program is comprised of several tools that may be purchased together or separately. Data Integrator accepts data from any database or application and joins it so that Builder can transform it into a model. Builder dynamically compresses, indexes and stores the data into a unique structure that allows fast access and graphic manipulation with minimal setup. Diver provides user-friendly pull-down menus, automatically creating graphic and tabular formats, multidimensional views and dive-down capability to any level of detail with the point and click of a mouse. The Reporter generates electronic reports with "live" access to data. The Selector provides real-time access to SQL databases from a CrossTarget application.

Crystal Ball 3.0
Forecasting and risk management
Macintosh Plus or larger; 4 MB of RAM recommended; System 6.0.5 or later; Excel 4.0 or later.

Crystal Ball is a forecasting and risk management package that combines the decision making benefits of simulation with a familiar spreadsheet interface. Through Monte Carlo (and/or Latin Hypercube) simulation, the program forecasts all the possible results for a given situation. Its graphic interface gives users an intuitive feel for the decision at hand and, by requesting a "confidence level," users can determine the likelihood of any specific event. Crystal Ball seamlessly interfaces with Excel. Users' existing spreadsheets are often usable without change. Additional features include descriptive statistics on any forecast, sensitivity analysis of a model with respect to various assumptions, trend charting, correlated variable assignments, reporting capability and transfer of information to other applications.

DataSmarts
Power tool for database mining
Macintosh Plus or larger; 1 MB of RAM; hard disk drive.

DataSmarts is a solution for turning scientific, engineering and business data into insights, decisions and competitive advantage. Based on AI technologies, such as neural networks, machine learning and expert systems, it is designed to unleash their power to forecast trends, diagnose conditions, process signals and classify and recognize patterns, quickly and easily. DataSmarts provides powerful and sophisticated features transparently to users, such as database/spreadsheet access with common file formats, exploratory analysis, profiling and reporting of variable contributions, preprocessing with more than 20 functions to improve predictions beyond the ability of conventional statistical programs. DataSmarts gives business and technical users intuitive understanding of their data and practical guidance to decisions in a wide variety of database analysis tasks using built-in, just-in-time knowledge and expertise.

Decision Analysis By TreeAge (DATA) 2.5
Decision analysis (Bayesian)
Macintosh Plus or larger.

DATA enables a user to implement the techniques of decision analysis as taught in the nation's leading universities, with a level of speed and efficiency never before possible. By offering far more than computational ability, DATA supports decision makers who must deal with uncertainty and complexity. For example, DATA is used by engineers to assess risk, by economists to explore the consequences of competing policies, by product managers to ascertain the potential value of market research, etc. DATA furnishes a decision maker with an effective tool for dealing with these problems through a structured methodology that first puts the uncertainties into perspective and then takes them into account in the decision making process. The possible chains of events (decisions, chance events and final outcomes) are identified in a tree structure that clearly specifies the sequence of events. DATA then calculates the value of each possible chain of events, giving appropriate weight to each possible outcome. With this information graphically displayed, a decision maker can evaluate each intermediate point on the decision tree and identify the sequence that will maximize value or minimize costs, depending on the objective. Finally, a decision maker can call on DATA to perform sophisticated sensitivity and risk analyses to assure that the best possible decision is being made. DATA is 32-bit clean and System 7 savvy. It supports Apple Events, including Publish & Subscribe, Balloon Help and TrueType fonts.

Decision Analysis Techniques
Major techniques for decision analysis including decision trees and tables, analytical hierarchy technique, the Electre technique, Bayesian probability
Macintosh 512K or larger.

Decision Analysis Techniques covers modern techniques developed to aid in the process of decision making. Techniques described include: the assistance of samples and experiments, the use of modeling and simulation, goal programming and mathematical programming, decisions under uncertainty and risk (involving the use of utility analysis and Bayesian probability theory), decision tables and decision trees, group decision making and the Electre technique, which allows a balancing of concordance and discordance in the subjective or objective evaluation of people or situations. Although the techniques themselves are easy to use, the ideas and procedures are highly sophisticated and involve the "next level" of statistical assistance to decision making.

Decision Analysis With Supertree
Decision analysis
Macintosh Plus, SE or larger; 1 MB of RAM.

Decision Analysis With Supertree presents decision analysis through applications, with a focus on making business decisions. The authors are decision consultants at Strategic Decision Group (SDG), a leading management consulting firm specializing in the application of decision analysis to corporate, R&D and manufacturing strategy. The second edition includes new material on formulating problems using influence diagrams and a more thorough and gradual introduction to the probability theory underlying decision analysis. The software component of the package has been upgraded to provide additional computing capability and now includes Sensitivity, a program that automates the sensitivity analysis of both spreadsheet variables and the Supertree decision tree analysis program.

Decision Master
Helps with the decision-making progress
Macintosh Plus or larger.

Decisions are almost never easy. Decision Master helps with the decision-making process by providing a simple and effective methodology for making decisions. Users use Decision Master to define decision-making criteria, weigh alternatives and determine the optimum solution. Flexibility is built in to provide for "hard facts" and intuition. Decision Master comes with sample decisions, including "Choosing the best car to buy" and "Deciding on a home loan."

■ **DecisionMaker**
Enables users to make smart business decisions
Macintosh Plus or larger; 2 MB of RAM; System 6.0.5 or later.

DecisionMaker is an expert way to make smart business decisions using a computer. In just minutes users can examine even the most complex choices confronting their business and determine the best course of action. DecisionMaker guides users step by step through the entire decision-making process with buttons, menus and dialogs. Slider controls let users quickly change expected probability, so it is easy to look at any number of what-if scenarios. Users can click a button to tailor the analysis to their own "risk attitude." Results can be displayed on screen or users can print out charts to graphically illustrate the best option for their business. The intuitive interface makes it easy to apply powerful analytical techniques to almost any type of strategic or tactical problem. The program employs the same sophisticated decision analysis methods taught in leading business schools and used in hundreds of corporations.

DeskSmarts Professional
Helpdesk development tool
Macintosh with 2 MB of RAM; hard disk drive.

DeskSmarts Professional provides full hypertext, database access and computational power for developing expert advisors ("smart partners") to diagnose, trouble-shoot, design, dispense and interpret complex information quickly and efficiently using its point-and-click interface. Using DeskSmarts Professional, users can re-engineer the workflow in their business, and improve the quality and speed of problem resolution in customer support, technical support or helpdesk environments to save both time and money—1,000 percent return on investment is typical. Easy to use but powerful, DeskSmarts Professional can use pictures, drawings, schematics and text to quickly guide users through problem identification and resolution for a wide range of situations, from equipment failure to

procedural processing snafus. It is designed to reduce training time, improve consistency of response and reduce maintenance costs. Typical advisory systems focus on strategic planning, logistics, product design manufacture, equipment repair and maintenance. Current applications are deployed in industries such as manufacturing, banking, communications, transportation, insurance and professionals such as law, medicine, architecture, as well as government agencies and educational institutions.

EISToolKit 2.11
Executive information system design tool
Macintosh II, Quadra or PowerBook 170; 5 MB of RAM; hard disk drive; System 7.0 or later.

EISToolKit is a development tool for building cross-platform, Client/Server Executive Information System (EIS) and Decision Support System (DSS) applications for the Macintosh, Windows and Sun OpenLook and Motif environments. All three EISToolKit platforms include GUI, presentation graphics, database connectivity and spreadsheet modeling tools, in addition to a full-featured spreadsheet for data analysis, and a powerful 4GL for detailed project customization. EISToolKit's point-and-click SQL generator provides access to more than 50 relational and non-relational databases. EISToolKit's major features include graphical tools for the creation of custom layouts, controls, graphs and links between layouts; an EIS/DSS Function Library, which contains more than 100 pre-built functions customized for application development; MicroStrategy's UltraSQL SQL language extensions, which allow designers to insert variables and arrays into the SQL code, which at query runtime, are converted to standard SQL; and EISToolKit's powerful "drill-down" capability, which allows the development of extremely flexible data browsing schemes to generate successively more specific and more detailed data queries.

Evolver
Problem-solving utility that uses an artificial-life based genetic algorithm to perform what-if analysis
Macintosh Plus or larger; Microsoft Excel.

Evolver is an optimization utility that uses a genetic algorithm to focus the search for solutions. Once installed, Evolver is available from within any spreadsheet. Users simply tell Evolver which cells it can adjust, which cells it should optimize and what constraints are imposed. Evolver displays its real-time progress in a graph window and can run in the background. The user interface is written in an advanced macro language, allowing advanced users to customize Evolver. Evolver can optimize any function, including linear, non-linear, stochastic or table-based, and can solve virtually any problem that can be modeled in Excel.

Extend 3.0
Simulation and modeling
Macintosh Plus or larger; hard disk drive.

Extend uses a block diagram approach to create simulation models for virtually any process. By connecting blocks together, users can explore ideas and try out concepts on the computer, before committing valuable time and resources. Extend can be used to validate theories, diagnose potential problems or find best performance/cost ratios. Extend combines the ease of use of an iconic modeling system with the power of a built-in authoring environment. Libraries of blocks are included so users can create models of the performance of almost anything without programming. For customized effects, blocks can be modified or created using Extend's scripting language. Extend supports both continuous and discrete event modeling and full connectivity with the outside world (spreadsheets, databases, I/O boards, etc.).

Extend+BPR 3.0
Provides an easy-to-use method to test assumptions about business process changes before they are implemented
Macintosh Plus or larger; 4 MB of RAM; hard disk drive.

Users can transform ordinary process flow charts into Extend+BPR (Business Process Reengineering) models for detailed analysis and experimentation through simulation. They can apply systems analysis techniques to TQM and process improvement efforts to assist in the reengineering of their business processes. Extend+BPR can be used for planning and decision support, modeling organizational change, operations and production systems, cycle time reduction, continuous improvement, human performance modeling, activity-based costing, productivity and quality improvement. With Extend+BPR, users can successfully combine measurement-oriented processes with a human centered approach to achieve both high productivity and morale. Users can create a team of personnel charged with implementing change for higher quality, improved customer service, shorter lead times and reduced costs. Extend+BPR combines the powerful Extend package with an additional library of blocks, numerous examples on disk and a supplemental manual.

Extend+Manufacturing 3.0
Used for modeling complex discrete event processes
Macintosh Plus or larger; 4 MB of RAM; hard disk drive.

Extend+Manufacturing solves dilemmas on the computer screen rather than on the manufacturing floor. By combining Extend with an additional library of blocks, users can graphically simulate and validate ideas to resolve questions and assist in the decision making process. Extend+Manufacturing utilizes a block diagram approach for discrete event model building for continuous improvement, operations research, industrial engineering, transportation and manufacturing analysis. It can assist in the prediction of system bottlenecks, determination of buffer lengths, build times and process timing so costs can be justified before resources are committed, options can be analyzed and operating procedures documents. The supplemental manual that comes with Extend+Manufacturing contains extensive operations research and queuing examples. The Manufacturing library provides greater flexibility in the creation of discrete event models and has blocks optimized for simulating discrete manufacturing processes.

Forecasting And Time-Series
Time series analysis and forecasting techniques covering smoothing techniques, regressive and autoregressive models and Box-Jenkins models
Macintosh 512K or larger.

Forecasting and Time-Series covers the general methods of analysis of time-series and the forecasting techniques based on those methods. All types of time series are considered, such as those with trends, seasonality and periodicity, autoregressive, etc. Examples of time series used range from stock prices and a utilities index to population series. Elaborate data entry and transformation facilities are provided. Time-series analysis covers the study of periodicity, correlation and cross-correlation, autoregression and Fast Fourier Transforms. Forecasting techniques range from simple methods, such as moving average smoothing and exponential smoothing, through autoregression and regression models, to Box-Jenkins techniques.

IdeaFisher 2.0
Brainstorming software
Macintosh Plus or larger; 1 MB of RAM; 7 MB of hard disk space.

IdeaFisher is a productivity tool designed to turn a user's computer into a sophisticated brainstorming and problem-solving partner. The powerful IdeaFisher's brainstorming system can be used to develop marketing, advertising and promotional campaigns. It can be used to solve problems and make meetings more productive. Users can create new products and name them. This interactive idea tool starts the brainstorming process by asking a series of questions about the problem a user is facing. Along the way, it triggers a user's brain to break out of its habitual rut and think about the problem in new and innovative ways. Later, when a user is ready to put their plan into action, it has another set of questions designed to stimulate new thoughts about implementing a user's ideas. IdeaFisher contains 705,000 idea associations and nearly 6,000 thought-provoking questions.

By adding the Strategic Planning Module to IdeaFisher, users start thinking creatively about where their company will be in five years. This module will help users understand their company's purposes, market and customers. It will then lead users toward developing a comprehensive plan for meeting the challenges they will face in the future.

The Speech and Presentation Module systematically guides users through the planning and creative stages of preparing a speech or presentation. By structuring creative efforts, users can be more confident when they deliver their message and be more certain that they have gotten the message across effectively.

The New Business and Grant Proposals Module guides users in creating proposals for service contracts, research projects, government grants and memorandums to business peers. It helps users identify important issues, maintain focus and plan creatively.

ithink 3.0 And ithink Authoring Version
Visual thinking tool for business process analysis to improve performance
Macintosh SE or larger; 4 MB of RAM recommended; hard disk drive; System 6.0.4 or later.

ithink is a powerful and flexible package for building and simulating business and organizational processes. The software, which includes extensive conceptual and technical documentation, has emerged as a key tool for addressing business issues of all types, ranging from strategic planning to business process re-engineering. Using a simple set of building block icons, users can construct a map of a process and how it works. The diagram automatically generates equations, used for simulation, allowing users to bring the map "to life." Output can be viewed as graphs, tables, diagram animation or QuickTime movies. Multirun sensitivity analyses allow users to perform a variety of what-if analyses as they explore different scenarios process improvement strategies. ithink supports QuickTime and Publish & Subscribe.

The Authoring Version of ithink allows users to create full-fledged multimedia Management Flight Simulators with which users can interact without needing to be familiar with underlying model detail.

Micro Saint & ActionView For The Macintosh
Network simulation modeling system
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; large monitor recommended.

Micro Saint is a discrete event network simulation modeling system that represents a bold new direction in simulation technology. Simulation is being used to provide answers to problems in a variety of application areas, including manufacturing, health care, government, retail, human factors and others. The problems being analyzed range from process control and resource utilization to paper flow and human performance. If users can represent a system or activity with a flow diagram on paper, they can build a computer model of the system with Micro Saint. Micro Saint's intuitive graphical interface allows even the most complex simulations to be built quickly and easily. With ActionView, users can create a dynamic graphical representation of their models. ActionView provides a library of icons that can be animated to create a realistic picture of the model as it executes.

MindLink
Idea generation and problem solving
Macintosh Plus or larger.

MindLink provides users with a powerful set of industry-tested tools for generating new ideas and applying new solutions to problems. It offers a proven problem solving format designed to develop those ideas into workable solutions to the original problem. The idea generation techniques feed automatically into the problem solving format, keeping a user automatically on track to solutions.
$299 retail
MindLink; Box 247; North Pomfret, VT 05053; 802-457-2025 or 800-253-1844

Muse
Self-contained system for publishing and analyzing data
Macintosh Classic II or larger; 5 MB of RAM; hard disk drive; System 6.0.5 or later.

Muse makes using data stored in relational databases easier than ever before. Muse automates the complete process that people naturally use to turn raw data into actionable information. Muse offers end users a compelling combination of ease-of-use and power: quickly and easily select data with point-and click graphical Query Builder tool; view, analyze and manipulate data in a WorkBook, a multidimensional relational table that's as straightforward as a spreadsheet but has the power of a relational database; visualize data in fully-labeled and scaled charts with a single click of the mouse; drag-and-drop chart data to rearrange the way it's displayed in numerous 2-D, 3-D and animated chart styles; and publish formulas, groups, synonyms and English-like data retrieval commands in a NoteBook for further customization and flexibility. Muse is an ideal information publishing vehicle that provides a sophisticated, yet affordable personal computer "information warehouse." It contains both a relational database and an integrated data dictionary with an extensive set of pre-defined functions and operator, as well as the means to store data-specific terms, descriptions, definitions and formulas. It is an ideal tool for financial analysts, product and marketing managers, scientists, researchers and anyone else challenged with analyzing data. It is also available for Windows.

PowerPlay For The Macintosh
Executive information system
Macintosh Plus or larger; System 6.0.4 or later.

PowerPlay for the Macintosh is designed to deliver corporate business performance to the desktop. PowerPlay replaces paper for distributing daily, weekly or monthly performance reporting to management. PowerPlay is a Desktop EIS (Executive Information System) for the entire management team, not just the few at the top. Traditional EIS are complex, costly and difficult to maintain. PowerPlay provides a highly graphical view of a business and gives users the full freedom to explore it. Users have maximum flexibility to explore with the minimum learning time. Users can drill-down to underlying details, switch graphic displays to show the clearest picture of the trends and slice and dice the business information by dimension (years, locations, products or channels, for example). All three simple techniques act together to refine the trend and uncover the real business issue.

ReMind
Case-based reasoning tool for building decision support applications
Macintosh Classic or larger; 4 to 8 MB of RAM; System 6.0.5 or later.

ReMind is a case-based reasoning tool. Case-based reasoning is the revolutionary technology that lets users build directly upon the knowledge contained in experience. The ability to recall, understand and analyze prior experience can help decision-makers avoid past mistakes, replicate previous successes, learn from present conditions by comparing them to the past and anticipate the future based on knowledge of the past. The power in ReMind comes from its ability to represent complex case structures, (a user's experiences) and automatically index them using inductive machine learning techniques. This process radically reduces knowledge engineering time (by as much as 60 to 70 percent), the major cost in building and maintaining expert systems. The functionality in ReMind is provided by editors that enable the developer to perform six functions: Case Representation, Case Input, Case Indexing, Case Retrieval/ Explanation, Case Adaptation and Interface Customization.

Sales And Market Forecasting
How to develop a company time-series and relate it to more general economic time-series; how to make a forecast and how to handle a forecast once made
Macintosh 512K or larger.

Sales and Market Forecasting builds on the material covered in Forecasting and Time-Series and attacks the very practical problem of how to make a forecast and what to do with the forecast once it is made. The starting point is the preparation of a demand analysis and the generation of a company time-series. The various factors that might appear in a company time-series (trends, seasonality, etc.) are examined in detail and examples are given of the appropriate forecasting techniques. The problem of relating the company time-series to more general business and economic time-series is covered, as is the development of the forecast itself. The preparation of a market audit from the various materials generated during the forecasting process is also included. Sources of information about business data are provided, as is an extensive database of about 50 yearly and monthly time-series obtained from the U.S. Department of Commerce publications. Numerous examples are provided.
$145 retail; program
$200 retail; with Forecasting and Time-Series
Lionheart Press, Inc.; PO Box 20756; Mesa, AZ 85277; 602-396-0899, 514-526-7877 or 602-396-0932 (fax)

StarTrieve
Innovative tool for accessing and analyzing relational data
Macintosh Plus or larger; 4 MB of RAM; System 6.0.5 or later.

StarTrieve is a powerful tool for retrieving and analyzing data. Focused on the end user, StarTrieve dramatically lowers the technical barrier to working with a relational database. With its intelligent query generator, StarTrieve leaves users free to concentrate on analysis rather than on the mechanics of data extraction. StarTrieve allows users to easily generate multidimensional reports and then drill down to underlying detail. The StarTrieve user environment is maintained by the StarTrieve Administrator. The StarTrieve Administrator offers IS professionals the ability to centrally coordinate and control database access. StarTrieve supports Oracle's SQL*Net, Sybase's Open Client, Apple's Data Access Language and EDA/SQL from Information Builders.

Synchronicity 3.0
Intuitive decision making; entertainment, relaxation, stress management
Macintosh Plus or larger; hard disk drive or external disk drive.

Synchronicity is a unique and aesthetically graphical system for managing chaos, based on timeless principles of the Book of Changes, or I Ching, and Jungian psychology. It supports intuitive decision making and better relationships, while reducing stress and worry. Synchronicity is a constructive way to take a time-out in the middle of confusing situations that is entertaining, relaxing and helpful.

TQM ToolKit
Provides assistance to those assigned the task of documentation and implementation of the quality process
Macintosh Plus or larger; hard disk drive recommended; System 6.0.7 or later.

Users can quickly bring their organization up to speed in the Quality Improvement Process with TQM ToolKit — tools to expedite the quality effort. TQM ToolKit contains the following components: TopDown Flowcharter software; flowcharting examples; a practical TQM implementation guide; templates; and custom charting symbols for TQM. TQM ToolKit provides assistance to those assigned the task of documentation and implementation of the quality process. TQM ToolKit helps instruct employees and managers how to review and document processes, as well as provide guidance to those individuals actually charting the workflow. The TQM Practical Implementation Guide describes process documentation in a step-by-step manner and includes example TQM charts created using TopDown Flowcharter. The guide tells users how and when to use TopDown in documenting their processes.

@RISK
Risk analysis and simulation
Macintosh SE/30 or larger; 2 MB of RAM; hard disk drive; Microsoft Excel 3.0 or later; or Microsoft Project 3.0 or later.

@RISK is a Microsoft Excel or Project add-in for risk analysis. Any worksheet built in Excel can be used with @RISK. The software uses Monte Carlo simulation to analyze uncertainty. Probability distributions are added to cells in the worksheet using 30 new probability distribution built-in functions, including normal, lognormal, beta, uniform and triangular. Simulations are controlled from an Excel-style menu that lets users choose Monte Carlo or Latin Hypercube sampling, select output ranges and start simulating. Results are displayed graphically and detailed statistics reports are generated. The probability distribution built-in functions can be used anywhere in a worksheet,

either alone in a cell or as part of other expressions, and their parameters can be references to other cells. Dependencies can be specified. The seed of the random number generator can be specified. High-resolution graphics enhance manipulation of output results. Simulations can be paused and restarted.

Desktop Communications/ Electronic Mail

1stBBS-II
Bulletin Board system with remote database access
Macintosh Plus or larger; 1 MB of RAM.
1stBBS-II provides a powerful data communications system, linking together Macintoshes and DOS machines that have modems or are connected to an AppleTalk network. Remote users would have the ability to access databases, transfer files and E-mail capability. 1stBBS-II would prove invaluable for companies with branches in many different cities. All remote users would have the ability to access databases, such as a customer address list, price list, inventory, etc., and to send private E-mail messages with files attached. Registered owners of 1stBBS-II are licensed to make an unlimited number of copies of the Mac or DOS version of the remote modules. The program is designed to minimize online time and expense by allowing users to perform many of their tasks while offline. The host module is password protected and maintains an activity log. 1stBBS-II is AppleTalk and System 6/7 compatible. Modem speeds up to 38,400 bps and V.32 and V.42bis are supported.

AlisaMail 4.2
VAX-based electronic mail system
Macintosh Plus or larger.
AlisaMail is an easy-to-use enterprise electronic mail and corporate directory service integration system designed for demanding messaging environments that require support for standard and proprietary mail protocols. Based on Sybase relational database, its distributed architecture and comprehensive directory service make electronic message integration more reliable and simple to administer in a large E-mail environment. AlisaMail fully integrates a broad base of PC, Macintosh, Unix and DEC VAX E-mail systems. By allowing various hardware and software platforms to seamlessly and transparently exchange electronic messages, fully editable documents and binary files, AlisaMail integrates corporate E-mail with Microsoft Mail, Lotus cc:Mail, CE Software QuickMail, WordPerfect Office, X.400, SMTP and Digital's VMSmail, ALL-In-1 and Message Router (with access to PROFS, SNADS, PMDF, etc.) mail systems. AlisaMail's OpenDirectory eliminates complicated addressing schemes by maintaining a common address book that propagated to each mail system. This standardized addressing allows users to simply point and click to send messages and attachments between Microsoft Mail, cc:Mail, QuickMail, MHS, VMSmail and other enterprise mail users. OpenDirectory lists all E-mail users on the network and clearly indicates how to reach them. The directory information contains much more than just the user name and address; it adds document translation preferences, fax and phone numbers, postal address, role, organization, location, notes and photographs, if desired. OpenDirectory information can be accessed from PeopleFinder and non-mail applications, such as Microsoft Word for Windows, Excel, Access and Visual Basic. OpenDirectory can be integrated with corporate databases.
$10,000 retail; starting price (site license available)

BlitzMail
Enterprise-wide electronic mail system
Macintosh Plus or larger; System 6.0, 7.0 or 7.1.
BlitzMail is an electronic mail system that supports large organizations with tens of thousand of mailboxes. Its Macintosh client communicates with a distributed message server that holds all mail messages. In addition, BlitzMail interoperates with other E-mail systems through its built-in SMTP gateway. Messages may be addressed simply by typing a person's name — the BlitzMail Server relies on the DND, a name and authentication server, to find a unique match (or indicate that multiple names match the entry). The DND also contains a person's "preferred E-mail address," which may be a Macintosh, a host-computer account or a mail stop, in which case the message is printed to be sent as paper mail.
$3,000 retail; 100-user license

cc:Mail Macintosh Platform Pack
Electronic mail
Macintosh Plus or larger.
cc:Mail Macintosh Platform Pack is an electronic mail program that lets users communicate with other cc:Mail users regardless of their computing platform or location. Users can send text, sound, QuickTime movies, graphics, facsimile or other files to cc:Mail users on Macintosh, DOS, Windows, Unix or OS/2 computers. cc:Mail is easy to administer because cc:Mail messages are stored on whatever file server a user is using — AppleShare, NetWare, LAN Manager, etc. Other cc:Mail Platform Packs are available for DOS, Windows, Unix and OS/2.
cc:Mail Remote for Macintosh is an electronic mail program that allows users on stand-alone Macintosh (or PowerBook) computers to exchange items with other cc:Mail users regardless of their computing platform. It works as a companion product to any cc:Mail Platform Pack on a local area network.

DaVinci eMail for the Macintosh 2.5
Full-scale electronic mail product
Macintosh Plus or larger; 1 MB of RAM; Novell NetWare for the Macintosh; Novell NetWare MHS; eMail 2.5 for DOS or Windows; System 6.0.5 or later.
DaVinci introduces a full-scale electronic mail product for the Macintosh with the rich feature set of its well known eMail for DOS and Windows. DaVinci eMail for the Macintosh is System 7 compatible and allows messaging between Macintosh and PC users on NetWare networks. It includes such sophisticated features as conversation threading, unlimited file attachments, built-in attachment viewers, hierarchical file folders, personal message encryption, spell checking, balloon help and more. DaVinci eMail for the Macintosh runs natively on Novell's NetWare MHS and Global MHS transport and offers the same tight integration with the NetWare administration and security as DaVinci's other eMail products. In a cross-platform installation, DaVinci eMail for the Macintosh ties transparently into the existing system administration with no extra maintenance required.

EMX, The Enterprise Mail Exchange
Multiprotocol E-mail switch based on X.400 and X.500 with full graphical management
Macintosh II.
EMX, The Enterprise Mail Exchange, is a family of scalable, multiprotocol backbone electronic mail switches and directory servers based on the 1988 versions of X.400 and X.500 that provide full interoperability with other major electronic mail distribution protocols, including SNADS, SMTP and MHS. Additionally, EMX maintains a complete subscriber directory of X.500 attributes and supports existing directory access and synchronization protocols. All current Soft•Switch products for mail connectivity, management and directory synchronization are fully compatible with EMX.
$4,000 starting price retail; LAN gateways
$30,000 starting price retail; EMX

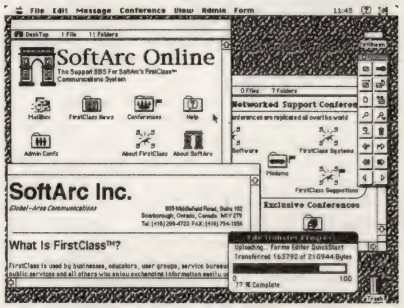
FirstClass
Cross-platform electronic mail, conferencing and remote access software
Macintosh Plus or larger; modem and network optional.



FirstClass is used by businesses, educators, user groups, service bureaus, public services and all others who enjoy exchanging information easily using the Macintosh and Windows interfaces. FirstClass saves users money by combining electronic mail, file sharing and electronic discussions seamlessly over networks and telephone lines and provides an outstanding, configurable graphical interface for doing so. FirstClass combines the features of a complete office electronic E-mail package and network conferencing system for electronic discussions. Its integrated remote dial-in functionality makes it ideal as an electronic bulletin board system for public access or customer support. A FirstClass client for Windows lets IBM and compatible users log in via network or modem without the need for complicated file servers or routers required by other multiplatform communications packages. SoftArc's FirstClass server software can run on any non-dedicated Macintosh and accommodate as many as 100 simultaneous network connections and 22 concurrent modem users.
$490 and up retail
SoftArc Inc.; 100 Allstate Pkwy.; Markham, Ontario, Canada L3R 6H3; 905-415-4000 or 905-415-7151 (fax)

■ FirstClass Retriever
Client software for Newton MessagePad users and FirstClass mail and conferencing systems
Newton MessagePad; SoftArc Inc.'s FirstClass.
FirstClass Retriever is a Newton MessagePad client for the FirstClass E-mail and conferencing system from SoftArc Inc. It allows users to automatically retrieve, read and reply to mail from remote FirstClass servers using a Newton MessagePad with either internal or external modems, modem-emulating wireless trans-

ceivers or a wireless local area network. New features incorporated into Retriever include networking support for operating Retriever over AppleTalk, the ability to browse folders in a user's mailbox, automatic retry on busy connection and new mail notification. FirstClass Retriever operates in two modes: Connect and Xchange. In Connect mode, users can selectively read and respond to messages while online with a FirstClass server. Xchange mode is used to minimize phone connect costs, allowing users to quickly download messages for later review and upload messages created offline in batch mode. Other features include: support for connections to multiple FirstClass systems or the same system with different locations and support for offline message creation.
$99 retail
Black Labs; 3613 Sunshine Canyon; Boulder, CO 80302; 303-938-8580 or 303-938-8546 (fax)

MacPROFF
Front end for IBM PROFS, OfficeVision and PASF electronic mail systems
Macintosh SE/30 or II family; 2 MB of RAM; hard disk drive; System 6.0.4 or later; HyperCard 2.1 or later; DCA MacIRMA family of products.

MacPROFF is a HyperCard-based front end for the IBM PROFS, OfficeVision and PASF electronic mail systems. It uses High Level Language Application Program Interface (HLLAPI) technology capable of displaying IBM mainframe computer screens (like mainframe screens) in HyperCard. MacPROFF is designed to make the process of interacting with the IBM mail systems a more pleasant experience by providing Macintosh features, such as copy, paste, pull-down menus and point-and-click buttons. The product includes more than 100 predefined cards that match the most commonly used E-mail screens. MacPROFF is designed to have no impact on a company's PROFS, OfficeVision or PASF system. All of the work done by MacPROFF takes place on the Macintosh, not on the mainframe. MacPROFF comes complete with a set of tools that make it a simple matter to change the look and feel of the interface to the mainframe-based system. Features include: sends multiple page notes from a scrolling field; allows for full-screen note editing in a Macintosh environment; provides a "Hot Calendar" by allowing users to click on a date to view the daily schedule; supports schedule and calendar functions in a point-and-click manner; sends multiple-page Macintosh text files as PROFS notes; stores nicknames, user IDs and distribution list names on the Macintosh; saves and searches notes in local HyperCard stacks; displays multiple-page notes in scrolling fields; deletes multiple notes in a batch; and prints notes directly on a Macintosh printer.
$129.95 retail
Mariette Systems International; 39 Ericson Rd.; San Mateo, CA 94402; 415-344-1519

Mail*Link Directory Services
Provides point-and-click E-mail addressing across gateways and backbones
Macintosh II or larger; 2.5 MB of RAM; hard disk drive.

StarNine Directory Services provides point-and-click E-mail addressing and synchronization across gateways and backbones. It solves the addressing problem between diverse mail systems by providing Macintosh users access to the addresses maintained by a wide variety of mail systems on Macintosh, PC and Unix platforms, and by transparently adding routing information when it is required to deliver mail to the returned address. It can also access Unix databases and Macintosh database files formatted with Mail*Link DS, which can hold any type of directory information (such as phone numbers). All changes and updates to a mail system are transparently recognized by Directory Services, without creating any additional work for the network administrator. E-mail gateways no longer need to be manually configured with lists of addresses or manually updated.
$2,995 retail; single-server bundle
StarNine Technologies, Inc.; 2550 Ninth St., Ste. 112; Berkeley, CA 94710; 510-649-4949 or 510-548-0393 (fax)

Mail*Link For cc:Mail/QM
Connects Macintosh QuickMail users with cc:Mail users on PCs and Macintoshes
Macintosh Classic or larger; 1 MB of RAM; hard disk drive; Microsoft Mail 2.0a or later or QuickMail 2.2.3 or later; AppleShare client software (included); System 6.0.4 or later.

Connecting Macintosh QuickMail users with cc:Mail users on PCs and Macintoshes, Mail*Link for cc:Mail/QM provides transparent connectivity between CE Software's QuickMail and Lotus Corp.'s cc:Mail. The gateway supports binary and text attachments, with special handling of enclosures to make them easier to use by PC recipients. Mail*Link for cc:Mail/QM is based on StarNine's MHS gateway for QuickMail. Novell's NetWare MHS (Message Handling Service) is an electronic mail protocol that is widely supported by PC LAN E-mail systems. Mail*Link for cc:Mail/QM is specifically designed to run with cc:Mail's MHS gateway in SMFLink mode, which does not require that NetWare MHS be running. A DOS utility provided with StarNine's gateway automates the process of setting up the directory structure that the two mail systems share. It requires cc:Mail Router software, which is already owned by any cc:Mail site with more than one cc:Mail post office.
Call for pricing; varies according to number of Macintosh users
StarNine Technologies, Inc.; 2550 Ninth St., Ste. 112; Berkeley, CA 94710; 510-649-4949 or 510-548-0393 (fax)

Mail*Link For MacX.400/QM And Mail*Link For MacX.400/MS
E-mail gateway between QuickMail or Microsoft Mail for AppleTalk networks and the X.400 world via Apple's MacX.400 MTA
Macintosh Classic or larger; 1 MB of RAM; hard disk drive; Microsoft Mail 2.0a or later or QuickMail 2.2.3 or later; System 6.0.4 or later; Apple's MacX.400 MTA; Apple's Ethernet NB card (for IEEE 802.3 backbone) or Serial NB card with MacX25 software 1.1 (for X.25 network).

Mail*Link for MacX.400/QM and for MacX.400/MS connect QuickMail or Microsoft Mail users on a Macintosh with X.400 backbones or public services. The gateway provides aliasing of QuickMail or Microsoft Mail user names into O/R addresses, supports AppleSingle, MacBinary and DataFork-Only for enclosure transport, maps outgoing enclosures into administrator-selectable body parts (including IA5 Text, ISO 6937 Text, T.61 Standard Binary and MacBinary — ODA and ASN.1 body parts are automatically utilized if those types of documents are sent), supports the reply function with automatic full reply addresses in Domain-Defined Attribute Form (DDA) or Personal Name Format, supports bi-directional return receipts (including preservation of the X.400-required receipt correlator) and allows interval for polling the MacX.400 server to be configured.
Call for pricing; varies according to the number of Macintosh users
StarNine Technologies, Inc.; 2550 Ninth St., Ste. 112; Berkeley, CA 94710; 510-649-4949 or 510-548-0393 (fax)

Mail*Link For PowerShare
Connects AOCE PowerShare servers with Macintosh, Unix and other E-mail systems
Macintosh II or larger; 4 MB of RAM; System 7.1 or later with PowerShare Mail Server software.

The Mail*Link for PowerShare product line provides gateway connectivity between AOCE PowerShare Mail Servers and other mail systems. Mail*Link for PowerShare/QM connects PowerShare servers to QuickMail servers over AppleTalk. Mail*Link for PowerShare/MS connects PowerShare servers to Microsoft Mail servers over AppleTalk. Mail*Link SMTP for PowerShare connects PowerShare servers to any mail system or gateway that supports SMTP, the standard mail protocol for Unix environments and the Internet.
Call for pricing
StarNine Technologies, Inc.; 2550 Ninth St., Ste. 112; Berkeley, CA 94710; 510-649-4949 or 510-548-0393 (fax)

Mail*Link For PowerTalk
Connects AOCE PowerTalk users with QuickMail or Microsoft Mail servers
Macintosh II or larger; 4 MB of RAM; System 7.1 or later with PowerTalk.

Mail*Link for PowerTalk/QM and Mail*Link for PowerTalk/MS allow transparent use of QuickMail or Microsoft Mail accounts via the AOCE PowerTalk interface. Mail appears in a PowerTalk user's In Tray, enabling easy communication with other PowerTalk users or gateways, as well as QuickMail or Microsoft Mail users.
Call for pricing
StarNine Technologies, Inc.; 2550 Ninth St., Ste. 112; Berkeley, CA 94710; 510-649-4949 or 510-548-0393 (fax)

Mail*Link For VINES/QM
E-mail gateway between QuickMail and Banyan VINES mail systems
Macintosh Classic or larger; 1 MB of RAM; hard disk drive; Microsoft Mail 2.0a or later or QuickMail 2.2.3 or later; AppleShare client software (included); System 6.0.4 or later; Banyan VINES 5.0 or later.

Mail*Link for VINES/QM connects QuickMail users on the Macintosh with Banyan VINES mail users on the PC. Using an AppleTalk connection between the two networks, Mail*Link for VINES translates messages directly into the proprietary format of each mail package. It also provides aliasing of QuickMail user names into StreetTalk addresses, allows more than 10 enclosures, can convert text enclosures to 72-character line length for optimal use by PC recipients, supports the reply function with automatic full reply addresses, supports bi-directional return receipts and allows the incoming mail search interval to be configured (reducing network traffic). Mail*Link for VINES is fully integrated with the Intelligent Messaging Service and requires VINES 5.0 or later.
Call for pricing; varies according to number of Macintosh users
StarNine Technologies, Inc.; 2550 Ninth St., Ste. 112; Berkeley, CA 94710; 510-649-4949 or 510-548-0393 (fax)

Mail*Link MHS
E-mail gateway between Macintosh and PC E-mail systems
Macintosh Classic or larger; 1 MB of RAM; hard disk drive; Microsoft Mail 2.0a or later or QuickMail 2.2.3 or later; AppleShare client software (included); System 6.0.4 or later.

Mail*Link MHS is an E-mail gateway between Microsoft Mail or QuickMail and NetWare MHS (Message Handling Service). The gateway supports MHS 1.5. With Mail*Link, users can exchange messages with MHS-compatible systems. A partial list of these accessible systems include: Da Vinci, cc:Mail, Notework, WordPerfect Office and Beyond Mail. Mail*Link MHS runs on one Macintosh and use of the gateway is transparent to end users. Multiple text and binary file enclosures are supported, as well as return receipts and replies.
Call for pricing; varies according to number of Macintosh users
StarNine Technologies, Inc.; 2550 Ninth St., Ste. 112; Berkeley, CA 94710; 510-649-4949 or 510-548-0393 (fax)

Mail*Link Remote
E-mail gateway between Macintosh mail and UUCP/Internet
Macintosh Classic or larger; 2.5 MB of RAM; Microsoft Mail Server and Microsoft Gateway software for Microsoft Mail 2.0a or later; or QuickMail 2.2.3 or later; modem or serial line connection; System 6.0.4 or later.

Mail*Link Remote is an E-mail gateway between Macintosh mail systems over asynchronous communications lines (modems, serial, etc.). With Mail*Link Remote, users of either Microsoft Mail or QuickMail can easily exchange mail with remote sites running Macintosh, PC or Unix mail systems, as well as the Internet. Mail*Link Remote uses UUCP (a standard protocol for asynchronous serial communications). Mail*Link Remote provides easy mail addressing with aliases. Incoming messages from Unix or remote Macintosh mail sites are forwarded directly to the addressed Macintosh user. Easy to install and admin-

ister, the gateway runs on a single Macintosh. Dial-up times, modem types and serial ports are all easily configured. Mail*Link Remote supports Macintosh mail users' capability to transfer binary and text files as mail attachments.
Call for pricing; varies according to number of Macintosh users
StarNine Technologies, Inc.; 2550 Ninth St., Ste. 112; Berkeley, CA 94710; 510-649-4949 or 510-548-0393 (fax)

Mail*Link SMTP
E-mail gateway between Macintosh mail programs and Unix mail over TCP/IP networks
Macintosh Classic or larger; 2.5 MB of RAM; Ethernet connection (MacTCP included); QuickMail 2.2.3 or Microsoft Mail 2.0a; System 6.0.4 or later.

Mail*Link SMTP is an E-mail gateway that connects QuickMail or Microsoft Mail for AppleTalk networks to any system that supports SMTP, the standard mail protocol for Unix environments. It is also used to connect Macintosh mail systems to the Internet by way of a local Unix host. Mail*Link allows Macintosh and Unix users to send mail to each other without leaving their preferred environments. The gateway transfers mail in the background to a user's local mail package. Mail*Link supports mail users' capability to send text or binary files as mail enclosures to and from SMTP mail networks. Macintosh files can be transferred in AppleSingle, DataFork Only or BinHex format so they can be of optimal use to the recipient. Easy to install and administer, the gateway operates entirely on one Macintosh and requires no additional software on the Unix system.
Call for pricing; varies according to number of users
StarNine Technologies, Inc.; 2550 Ninth St., Ste. 112; Berkeley, CA 94710; 510-649-4949 or 510-548-0393 (fax)

MesaMail
Provides a Macintosh interface to host-based mail systems
Macintosh Plus or larger; System 6.0.4 or later.

MesaMail provides a Macintosh interface to host-based mail systems via local in/out boxes, mail browsing and a flexible screen display of the mail in a user's choice of font, size and window layout. When scheduled or asked to pickup and deliver mail, MesaMail signs on to mail systems, retrieves and sends the current mail. The browser supports scanning of mail and text documents in a folder (e.g., the inbox folder, the outbox folder or one of the archive folders). Multiple users on one Macintosh are supported via "User Folders," which can have independent address directories, mailboxes, inboxes and outboxes. MesaMail uses Apple's Communication Toolbox for connecting to the host and supports Unix mail systems, VAX mail systems, CompuServe and other command line-based mail systems.

Microsoft Mail 3.1
Electronic mail program for Macs and IBMs and compatibles on AppleTalk and compatible networks
Macintosh Plus or larger; local area network (AppleTalk, EtherTalk or compatible).

Microsoft Mail is a fully integrated desktop communications/electronic mail system that allows users on any number of local or remote AppleTalk networks to communicate with each other by sending messages, files, custom forms and graphics. Remote dial-in ability is supported. The Microsoft Mail server software functions as a central resource manager for all electronic mail sent and received on the LocalTalk network. It maintains a current listing of all mailboxes registered on the system. The server eliminates the problem of lost messages and files by storing them to disk immediately upon receipt. Users can send messages, documents, files, custom forms and voice messages. Mail can be sorted by subject, sender or date sent and stored in customized folders. Personal address book and group names are automatically updated. An unlimited number of files can be attached to a message. Mail can be sent and received from within other applications. Microsoft Mail is integrated with Microsoft Word, Excel and Aldus PageMaker so users can share in the creation of information. Mail can be sent to users on other E-mail networks, such as AppleLink, MCI Mail or PROFS, through gateways that are available to Microsoft Mail.

Microsoft Mail For Macintosh Gateway To X.400
X.400 connectivity for Microsoft Mail users
Macintosh Plus or larger; 4 MB of RAM; System 6.0.2 or later; MultiFinder 6.1 or later.

The Microsoft Mail for Macintosh Gateway to X.400 provides easy access to other E-mail systems and public mail networks. Used in conjunction with OPENServer 400, the Gateway allows users to send messages or files quickly and easily — across the office or around the world. The Microsoft Mail Gateway to X.400 and OPENServer 400 work together to provide MS Mail to X.400 file conversion and transmission facilities. By using the standard X.400 data format, messages can be exchanged between otherwise incompatible E-mail programs, whether they run on mainframes, minicomputers or other LAN systems. The OPENServer/Gateway combination provides a flexible, reliable and efficient message transportation system.

■ **NewtonMail**
Allows users to exchange text messages
Newton MessagePad.

NewtonMail enables Newton users to exchange text messages easily with each other and with anyone who can be reached on CompuServe, America Online, MCI Mail, AppleLink, SprintMail, EasyLink and other online services accessible via the Internet. In addition, NewtonMail allows electronic exchange of Newton information, such as notepad messages (including graphics), business cards and calendar appointments between NewtonMail subscribers. By taking advantage of intelligent assistance support for addressing messages, users can send mail from any application within Newton. In addition, NewtonMail uses metaphors consistent with other built-in Newton applications, such as the In-Box and Out-Box functions. To get started with NewtonMail, users need a Newton device, a Newton Fax Modem, a phone line and a NewtonMail account. The NewtonMail Starter Kit includes a booklet describing the service, a pocket-sized listing of worldwide network access telephone numbers and a certificate with a password and registration number for automatic online registration.

OTA — On The Air
Allows users to communicate with sound over any AppleTalk or Ethernet network
Macintosh Plus or larger; System 7.0 or later.

OTA is an ideal intercom system for the Macintosh office. It allows Macintosh users to communicate with sound over any AppleTalk or Ethernet network. With the Macintosh built-in microphone or third-party microphone, users hold live conversations across a network — even across a busy LocalTalk network. Users send messages quickly and easily using a customizable address book or the convenient "one-key connect" feature. Scanned photographs can be made to appear on the screen when connected with another user. OTA also transmits saved sounds and contains a substantial library of exciting sound effects. Sounds and messages play automatically in the background, without affecting a user's current work. PowerBook users can also communicate through a single telephone line with users in the home office while accessing other network information.

PowerRules 1.0
Delivers intelligent agent technology to Macintosh users
Macintosh Plus or larger; hard disk drive with 1.2 MB of free space; System 7 Pro.

PowerRules is an easy-to-use add-on application for Systems 7 that let's users conquer information overload and access important information quickly and easily. PowerRules filters new letters for users, maintains letter tags and automatically replies to and forwards letters when they're in the office and when they're not, regardless of which letter application they are using. By using AppleScript, the advanced features of PowerRules gives users the capabilities to automate workflow and ongoing communications within their workgroup. With PowerRules, users can, for example, automate a purchase order approval process, trigger a spreadsheet consolidation or database query, or manage a document review process.

QM Log Translator 1.6h
Summarizes the logs that are automatically sent to the custodian from a QuickMail server
Macintosh Classic or larger; 4th Dimension (V2 or V3) or 4D Runtime (V2 or V3); QuickMail 2.5/2.6; System 6.0.5 or later.

QM Log Translator is a 4th Dimension database that will aid an administrator of any size QuickMail network by analyzing the efficiency and effectiveness of the QM MailCenter's activity. QMLT summarizes the logs that are sent to a custodian of the QuickMail 2.5/2.6 server. These logs contain valuable information that can help a QuickMail server run more efficiently. QM Log Translator can import Online, QM-QM, QM-Direct, QM-Script, AppleLink, Connect, Printer, 4-Sight Fax, FaxGate, Mail Usage Logs and Serial Number Logs. Users can even automatically send a QuickMail message to mail log offenders, letting them know exactly how much server space all their messages are taking.

QM-Page
Full text electronic mail to wireless receiver
Macintosh SE or larger; 2 MB of RAM; System 6.0.5 or later.

QM-Page allows any user of QuickMail by CE Software to originate alphanumeric pages as easily as they send any other electronic mail message. Users who are running QuickMail or are gateway'ed to QuickMail from other mail systems may type E-mail messages at their desks, send them via QuickMail using QM-Page and have the full text message delivered to the designated wireless receiver. No additional user training is required. QM-Page is designed for work groups with one to 2,000 wireless receivers. The QM-Page Gateway runs directly under and shares a modem with the QM-Administrator. Multiple paging services are handled with varying message length requirements using dial-up or direct serial connect. Unique features include future page, message to multiple addresses, up to 5,000 character messages and automatic "Split Paging." QM-Page supports wireless receivers, including Newton and Simon PDAs, palmtop and laptop computers and alpha and digital pagers.

QuickAgent
Scriptable E-mail application
Macintosh Plus or larger; CE Software's QuickMail; System 7.0 or later.

QuickAgent is a scriptable E-mail application supporting CE Software's QuickMail products. QuickAgent provides QuickMail send and receive capabilities to any Apple Event-savvy application. With fully-documented and easy-to-use Apple Events, users can send and retrieve QuickMail with products like FileMaker Pro, FoxPro for Macintosh, Frontier, HyperCard and SuperCard. QuickAgent includes example FileMaker Pro templates. Through simple scripting, QuickAgent can alert applications when mail has arrived, send different events based on the content of the incoming mail and send a standard reply based on the content of the incoming mail. Replies can be included in the script, stored in a text file or sent as a file enclosure.

SNADS Gateway/MS Mail
Extends the distribution capabilities of Microsoft Mail
Macintosh IIx or IIcx; Microsoft Mail gateway.

SNADS Gateway/MS Mail, in conjunction with other Soft•Switch products or with IBM's DISOSS, transparently extends the distribution capabilities of Microsoft Mail. Microsoft Mail users can exchange mail in the form of final-form messages, editable documents and binary files (e.g., spreadsheets) with users of other systems that are connected to a Soft•Switch Enterprise Mail Network or to DISOSS. By connecting a SNADS Gateway/MS Mail to Soft•Switch Central executing on an IBM host or EMX, the Enterprise Mail Exchange, Microsoft Mail users can access Soft•Switch services (e.g., Library Services, Translation Services, Distributed Print Services or Directory Services) available on the Soft•Switch Enterprise Mail Network.
$4,000 starting price retail
Soft•Switch, Inc.; 640 Lee Rd.; Wayne, PA 19087; 610-640-9600 or 610-640-7550 (fax)

Snap Mail
Electronic mail and messaging package
Macintosh Plus or larger; System 6.0.2 or later.

Snap Mail is an electronic mail and messaging package used on AppleTalk networks in workgroups, schools, offices and homes. Users can perform all basic functions of an E-mail system, including sending, receiving and replying to mail right from the main window — effortlessly. Mail items are listed in a summary format. Users can quickly view any piece of mail by double-clicking on that particular item to read the contents. The first-time user can begin to use Snap Mail immediately and advanced users will love all the preferences and options available. Other features include: easy to install and learn; requires no administrator or dedicated server; supports AppleTalk Remote Access; ideal for PowerBooks; offers conferencing and instant alerts; and transfers documents effortlessly.

Soft•Switch Central
Interconnect multivendor electronic mail networks
IBM VM/MVS host; appropriate network connections.

Soft•Switch Central and Gateways transparently interconnect multivendor electronic mail networks. Soft•Switch also provides tools to manage interconnected e-mail networks and the mail-enabled applications to exploit them. Soft•Switch Central connects existing mail systems with each other to provide a backbone mail network. Each user sees the network as if everyone uses their same electronic mail system; messages, editable documents and binary files can be freely exchanged.

TeamLinks Mail For Macintosh
Allows Macintosh users to exchange messages and attached files with other users across an enterprise-wide network
Macintosh Plus or larger; 1.5 MB of RAM; 40 MB hard disk drive; 3.5-inch SD disk drive; System 7.1 or later.

TeamLinks Mail for Macintosh is part of the DEC Mailworks family of products. It is a Macintosh Graphical User Interface implementation allowing Macintosh users to exchange messages and attached files with other PC, video terminal, Macintosh and workstation users across an enterprise-wide network. TeamLinks Mail for Macintosh is an electronic messaging application that implements recommendations from the 1984 CCITT X.400 P2 international messaging standard. As with other mail products, TeamLinks Mail for Macintosh performs the traditional tasks of creating, sending and storing mail and also has the advantage of X.400 standards compliance, extending the PC user reach into the Corporate Enterprise Wide Area Network (WAN).

UUCP/Connect
Complete UUCP integration for the Macintosh
Macintosh SE or larger; 2 MB of RAM; UUCP-capable modem.

UUCP/Connect provides a complete environment for reading electronic mail and Usenet news from a Macintosh via the UUCP protocol. Using Apple's Communications Toolbox, UUCP/Connect can be used over straight serial links, modems, AppleTalk, TCP/IP, ISDN, X.25 and others. UUCP/Connect's built-in terminal emulator offers VT100 emulation and is fully compatible with other Communications Toolbox tools. File transfer also supports the Comm Toolbox, providing for MacBinary, Xmodem, Ymodem and Kermit transfers. UUCP/Connect is available in two versions: client and server. Each local area network requires at least one Macintosh to act as a UUCP/Connect server. Additional Macintoshes can access news and mail from the server with UUCP/Connect client.
$295 retail; UUCP/Connect server
$195 retail; UUCP/Connect client

WorldLink
Makes Internet access readily available and affordable to companies, organizations and individuals without extensive hardware resources
Macintosh SE or larger; 2 MB of RAM (4 MB recommended); System 6.0.5 or later; Hayes-compatible modem.

WorldLink is a product that can be installed on either a Macintosh or DOS-based machine. Along with a Hayes-compatible modem and a regular phone line, it allows users to dial their accounts on PSInet and exchange messages with others who have an E-mail address that can be reached over the Internet. It also provides a capability to download files from an anonymous FTP server to the PC and an ability to subscribe to various bulletin boards over the Internet. There is a monthly charge of $9 to $29, depending on the level of service required, for use of the personal account and password on PSInet.
$29.95 retail
InterCon Systems Corp.; 950 Herndon Pkwy., Ste. 420; Herndon, VA 22070; 703-709-5500, 800-468-7266 or 703-709-5555 (fax)

Desktop Communications/ File Servers

AllShare V1.1
Non-dedicated AFP file server
Macintosh Plus or larger; 1 MB of RAM; System 5.0 or later.

AllShare is a non-dedicated, AppleShare-compatible AFP (Apple Filing Protocol) file server that operates in the background. Features include: AppleShare file servers and AllShare co-exist on the same network using the same AppleShare client software; implements byte range locking at all times; with AllShare, it is not necessary to dedicate a Macintosh solely as a server (every Macintosh running AllShare can act as a server, while others can access files on its disk); will publish volumes in three states — the entire volume, one folder or the entire volume with one folder protected (volumes can be password protected); allows users to determine how much time their Mac spends on server operations, giving the server more control when performing complicated tasks; and allows read/write access with the optional feature that prevents users from deleting a file or folder.
$249 retail; zone license
Everyware Development Corp.; 6543 Mississauga Rd.; Mississauga, Ontario, Canada L5N 1A6; 905-819-1173 or 905-819-1172 (fax)

AppleShare 4.0.2
File and print server software
Macintosh Centris 610, Quadra 700/800/950, Apple Workgroup Server 60/80 or Power Macintosh; 8 MB of RAM; hard disk drive; System 7.1 or later.

AppleShare 4.0 is a higher-performance version of AppleShare tuned for the Motorola 68040 microprocessor. Designed for small- to medium-size workgroups, AppleShare 4.0 runs on the Apple Workgroup Server 60 and 80, as well as Macintosh Centris 610 and Quadra 700, 800 and 950 computers. AppleShare 4.0 uses new software caching techniques to accelerate file server performance. These enhancements include file, directory and icon caches, which speed up all facets of server access. All AppleShare caches can be modified to tune the server for optimal performance, depending on the needs of the workgroup.

Call for pricing; AppleShare Pro (for use with Apple Workgroup Server 95 CPU)

Apple Computer, Inc.; 1 Infinite Loop; Cupertino, CA 95014; 408-996-1010 or 800-776-2333

AppleShare Server 3.0.1
File and print server software
Macintosh Classic or larger; 4 MB of RAM; hard disk drive; System 7.0 or later.

AppleShare Server is a new version of Apple's server software for the Macintosh that meets the security, performance and multitasking requirements of larger workgroups and departments within enterprises. AppleShare provides access to centralized shared storage for up to 120 concurrent users and queued access for up to five network printers. In addition, because AppleShare Server supports the multitasking feature of System 7, a Macintosh can run AppleShare simultaneously with other server software and applications, such as database servers and communication servers. AppleShare Server also has open Application Program Interfaces (APIs) to allow third parties to extend the AppleShare server's capabilities by offering such enhancements as server backup and accounting packages running on the same Macintosh server. AppleShare Server continues to feature easy installation and administration, and has increased password protection, server administration messaging, application launch-count control, copy protection and print spooling.
Call for pricing
Apple Computer, Inc.; 1 Infinite Loop; Cupertino, CA 95014; 408-996-1010 or 800-776-2333

Banyan VINES Version 5.54
Enterprise-wide networking system
Server requires IBM PC 386 or 486; 4 MB of RAM; 60 MB hard disk drive. Client requires Macintosh Plus or larger; 2 MB of RAM; System 6.0.7 or later.

Banyan VINES enterprise-wide networking system allows users to fully and easily integrate Macintosh workstations with DOS, OS/2 and Windows workstations on the same network. Any Macintosh on a VINES network can access local and wide area network resources absolutely anywhere on the network across the enterprise. VINES makes use of the AppleTalk filing protocol, including the Printer Access Protocol. In addition, AppleTalk tunneling through VINES enables disjointed AppleTalk networks to be connected with each other via the VINES network.
$2,995 to $14,995 retail; 10 users to 250 users
Banyan Systems Incorporated; 120 Flanders Rd.; Westboro, MA 01581; 508-898-1000 or 508-898-1755 (fax)

EtherShare
Macintosh file server for Unix computers
Macintosh Plus or larger; hard disk drive.

EtherShare is a Macintosh file server for Unix computers running any of the standard versions of Unix, Digital, AIX RS-6000, Data General, HP, Sun OS and SGI. It integrates a high-performance file server, a print server (spooler) handling PostScript protocols and an AppleTalk Internet router. It also provides terminal services and access to Unix mail. It allows any Macintosh user on the network to perform Unix network administration tasks with the simple Macintosh point-and-click interface. EtherShare is fully compatible with AppleShare, but operates at the 10 Mbits/second speed of Ethernet. It supports MS-DOS computers via AppleShare's PC Client software and is fully compatible with EtherTalk and TokenTalk, as well as LocalTalk networking protocols. EtherShare runs as a separate process under Unix, leaving full system resources available for concurrent applications. It is fully AFP 2.1 compliant and compatible with both Phase 1 and 2 AppleTalk. Unix files are displayed on all the Macintosh screens in the network, using icons familiar to the user.
$4,300 retail
Helios USA; 10601 S. DeAnza Blvd., Ste. 103; Cupertino, CA 95014; 408-864-0690 or 408-864-0694 (fax)

FTPShare
Allows a Macintosh to be used as an FTP file server
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later.

FTPShare is a set of communications applications that allow a Macintosh to be used as a multisession background FTP file server. It can be accessed by any computer with an FTP client application over a TCP/IP network. FTPShare provides a user access scheme similar to the one available in Apple's File Sharing for System 7.0 and allows: files to be transferred between a Macintosh and FTP clients; up to 20 clients to connect at the same time; an access profile to be given to each user; guest users to connect to the file server; support of aliases; and many other features. FTPShare is bundled with FTPack, ASC's FTP client for the Macintosh.
$140 retail

GatorShare
Turns the GatorBox CS or GatorStar GX into a file sharing gateway between LocalTalk and Ethernet LANs
Macintosh Plus or larger; GatorBox CS or GatorStar GX; workstation or minicomputer using Network File System.

GatorShare software turns the GatorBox CS or GatorStar GX into a file sharing gateway between AppleTalk and Ethernet LANs. Using the AppleShare interface, Macintosh users can access and store files on NFS hosts on Ethernet. Key features include: file sharing between Macintoshes and most Unix workstations using industry standard AppleShare and Network File System (NFS) protocols; installation only on the GatorBox CS or GatorStar GX, quickly and easily; AppleShare interface that gives Macintosh users easy access to NFS file servers; and data sharing between applications running on different platforms, such as Interleaf, WordPerfect, AutoCAD and others.

GatorPrint — GatorShare's printing component — translates the Unix remote printing protocol, lpr, into the printing protocols used by AppleTalk printers. So, Unix computer users can print to PostScript devices on LocalTalk, and it's faster than printing to a directly connected printer. GatorPrint is also available as a stand-alone product. Because GatorShare and GatorPrint run on the GatorBox CS or GatorStar GX, the network administrator never needs to install software on either the Unix computers or the Macintoshes on the network, easing network maintenance and expansion.
$995 retail; GatorShare and GatorPrint
$495 retail; GatorPrint (stand alone)
Cayman Systems, Inc.; 400 Unicorn Park Dr.; Woburn, MA 01801; 617-932-1100

LS1000
Client/server file transfer software
Macintosh II family; LL1000.

LS1000 software permits exchange of files between NuBus-based Macintosh computers at very high transfer rates. Depending on system processor and backplane bus loads, transfer rates approaching 4 MB per second can be achieved. LS1000 utilizes the Lextel LL1000 NuBus link cards to achieve this high performance. An LL1000 NuBus card is installed in each Macintosh that will share files. Multiple systems are connected using fiber optic or coax cables in a star configuration with one machine acting as the hub. An LS1000/LL1000 link is useful in pre-press and other imaging applications where high bandwidth is required to move images between machines.
$250 retail
Lextel, Inc.; PO Box 306; Wakefield, MA 01880; 617-245-5017 or 617-245-6369 (fax)

Macintosh Support In NetWare V2.2
Offers full Macintosh integration with the NetWare V2.2 network computing environment
Macintosh Plus or larger (clients); System 6.0 or later; most 286- and 386-based PCs and PS/2s (servers).

NetWare V2.2 integrates the Macintosh computer into the NetWare computing environment. It enables Macintosh, DOS and OS/2 workstations to share data and network resources. NetWare services appear to a Macintosh user as AppleShare services, recognizable as Macintosh graphical icons. NetWare for Macintosh V2.2 provides support for AppleTalk (Phase I and II) and AppleTalk Filing Protocol 2.0 (AFP), in addition to LocalTalk, Ethernet, Token Ring and Arcnet cabling media. Using the utilities included with NetWare, system administrators can manage the network from any Macintosh on the network.
Included with NetWare V2.2
Novell, Inc.; 122 East 1700 South; Provo, UT 84606; 801-429-7000 or 800-638-9273

Maclan Connect
Enables any PC or compatible to function as an AppleShare-compatible server
IBM or compatible PC/XT/AT/386; 640K; AppleTalk Interface Card; DOS 3.3; any Macintosh.

Maclan Connect enables any PC/XT/AT/386 or compatible to function as an AppleShare-compatible server. The software package enables transparent file sharing between Macs and PCs. Maclan Connect also allows E-mail sharing between cross-platform E-mail packages. All hard disks, LAN volumes or other storage devices are available to AppleShare-connected Macintosh workstations. Maclan Connect is AppleShare Phase 2 compliant. It supports EtherTalk, TokenTalk, Internet Routers, etc. AppleTalk Filing Protocol (AFP) Version 2.1 specifications are fully supported.
$495 per server retail
Miramar Systems; 121 Gray Ave., Ste. 200B; Santa Barbara, CA 93101; 805-966-2432, 800-862-2526 or 805-965-1824 (fax)

Maclan Connect For NetWare
Integrates Macintosh computers and printers into any NetWare environment
IBM or compatible PC/XT/AT/386/486; 640K; AppleTalk interface card; DOS 3.3 or later; any Macintosh.

Maclan Connect for NetWare is a software gateway that seamlessly integrates Macintosh computers and printers into any NetWare environment. With Maclan Connect for NetWare, Macintosh users can now access hard drives, LAN volumes, CD-ROM drives and PostScript printers that exist within any NetWare 2.x-3.x network. Maclan for NetWare takes advantage of Novell APIs (Application Programming Interfaces) to make Maclan Connect aware of NetWare users, groups and print queues. The software is easy to install and operate because it does not require a complex knowledge of NetWare to set up the system.
$695 retail
Miramar Systems; 121 Gray Ave., Ste. 200B; Santa Barbara, CA 93101; 805-966-2432, 800-862-2526 or 805-965-1824 (fax)

MacTops V3.1
File server software for AppleTalk LANs providing transparent connectivity between Macintosh, IBM PCs and compatibles, Sun workstations and pen-based computers on a SitkaTops network
Macintosh 512K or larger; external disk drive or hard disk drive; Sitka TeleConnector or other AppleTalk-compatible cabling; thick or thin Ethernet cable for EtherTalk.

The distributed file-server architecture of MacTops allows each computer on a network to share files, disks and peripherals with any other computer on the network. SitkaTops can be configured as a distributed server network, a dedicated server network or a combination of both. MacTops features a print spooler for printing to the Apple LaserWriter and MacLinkPlus/Tops translators from DataViz, a file translator that translates text and data file formats between many of the popular Macintosh and DOS applications programs.

MacX.400 SD
X.400 server for communication among proprietary electronic mail systems
Macintosh Plus or larger.

MacX.400 SD (Single Domain) is an affordable X.400 server for communication among proprietary electronic mail systems. MacX.400 SD is optimized for smaller businesses, bureau offices or workgroups that need to communicate with only one X.400 server. Otherwise, MacX.400 SD offers all of the communication capabilities of the MacX.400 product. The MacX.400 products enable Macintosh users to send electronic mail to recipients on other platforms connected to X.400 networks. Used together with an E-mail gateway, either server can distribute X.400 services to mail users over an AppleTalk network or other networks. That type of configuration allows the

These Products Available Through Bottom Line Distribution
1-800-347-1923

exchange of E-mail among recipients within a country or worldwide. MacX.400 SD can also be used inside large companies to connect Macintosh workgroups to other platforms through the corporate X.400 backbone. Both the single-domain and multiple-domain products support the 1984 X.400 standard, including the P1 and P2 messaging protocols. They each come with a full OSI stack, which allows users to connect to local and wide area networks. MacX.400 and MacX.400 SD support the ISO Transport Class 4 protocol stack for communication over IEEE 802.3 Ethernet and both enable the exchange of E-mail with remote sites over X.25 networks (when used in conjunction with Apple's MacX25).

NCR StarGroup Server For Macintosh Clients
Enables Macintosh users to transparently share files and printers with MS-DOS, Windows, OS/2, LAN Manager clients, Unix system users and Novell NetWare clients
NCR System 3000 and StarServer; StarGroup LAN Manager 2.1a; Unix System V, Release 4.

The NCR StarGroup Server for Macintosh Clients enables Macintosh users to transparently share files, printers and applications with MS-DOS, Unix and OS/2 users on a StarGroup LAN Manager network. Macintosh users maintain the user interface and other characteristics inherent in the Macintosh operating system. StarGroup Server for Macintosh Clients combines AppleTalk protocols with LAN Manager technology to provide Macintosh users with a feature-rich network operating system. Support for the AppleTalk Filing Protocol ensures Macintosh application compatibility, while adding extensive printer support, security and the integration of mixed client environments. No additional Macintosh workstation software is required. A server-based print spooler enables Macintosh clients to use PostScript printers connected directly to the StarGroup Server or to a LocalTalk network. It also allows DOS and OS/2 clients to access the same printers whether they are directly connected or part of the LocalTalk network.

NetWare For Macintosh V3.11
Integrates Macintosh desktop systems into the NetWare V3.11 network computing environment
Macintosh Plus or larger (clients); System 6.0 or later; most 386- and 486-based PCs and PS/2s (servers).

NetWare for Macintosh V3.011 enables Macintosh users on a NetWare V3.11 network to access NetWare file, print and routing services via AppleTalk. Macintosh users share resources with DOS, OS/2 Unix and Windows clients on the NetWare network and enjoy enterprise-wide benefits of the NetWare operating system. These benefits include system fault tolerance, resource accounting and enhanced security. NetWare for Macintosh V3.011 is implemented as a set of NetWare Loadable Modules (NLM). The product provides support for AppleTalk (Phase I and II) and AppleTalk Filing Protocol 2.0 (AFP), in addition to LocalTalk, Ethernet, Token Ring and Arcnet cabling media. Using the utilities included with NetWare for Macintosh, system administrators can manage the network from any Macintosh on the network.

Partner
Enables bidirectional peer-to-peer networking between Sun SPARCstations and Macintoshes
Macintosh Plus or larger.

Partner is software that enables bidirectional peer-to-peer networking between Sun SPARCstations and Macintosh computers. It transparently integrates Sun's Network File Systems (NFS) with the Apple Filing Protocol (AFP). Every networked Macintosh hard disk can appear as an NFS file system on the Sun SPARCstation and Macintoshes can see the SPARC files as though they are in AppleShare volumes. This allows native applications on each machine to access and save data on either the Macintosh or the Sun SPARCstation. Integration is performed by bit-mapping Macintosh icons onto the Sun desktop and binding their type and creator data into the OpenWindows binder database. This cross-platform communication creates an environment where data sharing is accomplished without making copies, transporting or translating files. The result is a true peer-to-peer, symmetrical, bidirectional, distributed network environment where the user can be completely oblivious to the location or creator of data. Bidirectional printing and access to Unix mail is possible. With the optional PrintQMgr, users can also view and monitor print queues, obtain print status and change print job priority. This allows users to delete, suspend and resubmit their own print jobs to any available printer on the network. Partner is also now available for the NEXTSTEP Motorola 68040 and Intel 486 platforms.

PowerShare Collaboration Server
Provides the foundation for team productivity and workflow solutions
Macintosh with 68020 or larger processor; 8 MB of RAM; hard disk drive.

PowerShare Collaboration Server software provides System 7 Pro PowerTalk users with server-based messaging, shared catalogs and network security services on AppleTalk networks. The PowerShare Mail Server acts as a store-and-forward agent for PowerTalk messages, ensuring delivery even when the sender and recipient systems are not available at the same time. With AppleTalk Remote Access, remote users can dial in at any time to send and retrieve messages. The PowerShare Catalog Server is a shared repository for collaborative information, such as employee databases and corporate directories. PowerShare servers automatically authenticate PowerTalk users and encrypt their network traffic to ensure the privacy of sensitive information. Multiple PowerShare servers can work together using distributed, replicated catalogs that provide higher performance and greater reliability. Replicated catalogs are easy to manage because PowerShare automatically keeps them synchronized. Gateway software from other vendors allows PowerShare servers to exchange mail with other messaging systems. PowerShare servers can act as the focus for collaborative applications, ranging from basic electronic mail to sophisticated scheduling, project management and business forms routing. Independent software developers are creating innovative applications in these categories that take advantage of PowerTalk and PowerShare technology, enabling a wide range of team productivity and workflow solutions. PowerShare collaboration server software can be installed on the same Macintosh computer as AppleShare or other server software, and can be administered from any Macintosh system on the network.

Server Sentry 2.0
Apple Events interface package
Macintosh Plus or larger; 2 MB of RAM; System 7.0 or later.

Server Sentry is an Apple Events interface package that allows complete server management. Server Sentry can be used to remotely: control access to the server, get server log/statistics, provide alarms if problems occur, copy/manage users and groups between multiple servers, remotely launch/quit applications, remotely shut-down the server and much more. All of these tasks are done from an interface that is identical to the familiar AppleShare 3.0 Administration interface. Server Sentry's features can be broken down between those that are AppleShare 3.0 Admin. features, which are implemented remotely, and those that are newly implemented features. All features are accessed from the Sentry Admin. application, which runs on the Administrator's Macintosh. The Sentry Agent application, which resides on each of the file servers, communicates with the Sentry Admin. via AppleEvents. Server Sentry is compatible with AppleShare 3.x, 4.0 and Pro.

uShare
Enables Macintosh computers to be integrated with Unix workstations
Macintosh Plus or larger.

uShare enables Sun SPARCstations to function as fully-compatible AppleShare file servers. With uShare, Macintosh users can take advantage of the vast computing power and printing resources offered by the multitasking Unix operating system. With uShare and a Sun SPARCstation as a file server, Macintosh networks gain the capacity to store gigabytes of information, powerful PostScript printing resources, Unix mail access and much more. uShare's optional bidirectional print spooler enables AppleTalk and Ethernet printers to be accessed by both Mac and Sun users. And with the optional PrintQMgr, users can also view and monitor print queues, obtain print status and change print job priority. This allows users to delete, suspend and resubmit their own print jobs to any available printer on the network. Also, uShare's optional Unix mail module enables Macintosh users to send and receive mail messages using Unix mail. Because uShare was designed with the user in mind. Macintosh users access the Sun file server through the Chooser and see their files just as if they were using another Macintosh computer as a file server. From the Unix side, setup is very simple. uShare only requires the two simple steps of copying the software onto the workstation and starting the program.

Waterloo MacJanet 3.2
Network server that allows for shared applications and data, print spooling and electronic mail
Macintosh 512K or larger; 2 MB of RAM recommended; AppleTalk.

Waterloo MacJanet acts as a data server, a print server and a mail server. It is primarily designed for use with Macintosh workstations, though Apple IIGS and IBM PC workstations may also access the network server. Applications and data can be stored on a hard disk of the network server and shared by all the workstations. The number of concurrent users of an application can be limited, ensuring that only the licensed number of copies of an application are being run. The server tracks user activities, such as application, mail and print usage. Print service includes multiple LaserWriter and/or ImageWriter spoolers with feedback to the workstation, and LaserWriter page accounting. Users may communicate with each other through the use of messaging and electronic mail. For high-capacity network requirements, MacJanet supports multiple servers. For larger installations, MacJanet servers can be located on different networks, but still be accessible to any workstation through network bridges.

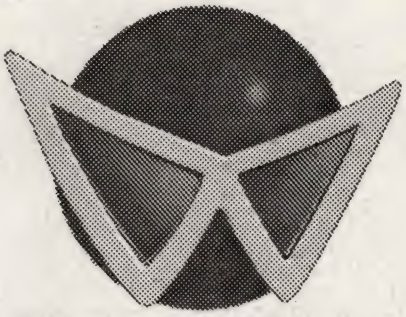
Desktop Communications/ General Terminal Emulation

5PM Pro
GUI development environment
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later.



5PM Pro is a powerful GUI development environment allowing users to create graphical front ends for terminal emulation-based host applications, as well as SQL-based client/server applications. 5PM Pro offers 5Talk, ASC's proprietary HyperTalk-like scripting language with full support for HyperCard XCMDs and XFCNs. The end user is given the ability to create palettes with graphical objects (i.e., buttons, icons, radio buttons, etc.). 5PM Pro allows users to integrate Legacy systems and client/server applications into one GUI desktop metaphor. 5PM Pro allows users to create a GUI interface that can be executed by ASC's 5PM Term terminal emulation product, which ships in different emulation modes, including: IBM-3270, IBM-3270TN, IBM-5250, IBM-5250TN, DEC-VT420, as well as Unisys, Bull and Honeywell connectivity.

5PM Term
Multisession communication application
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later.

5PM Term is a powerful multisession communication application with full support for Apple's Communications Toolbox (i.e., connection, file transfer and terminal tools). 5PM Term enhances basic terminal emulation by offering a macro-command scripting environment to automate log-on procedures, attach macros to keyboard keys and define hotspots. In addition, 5PM Term acts as a runtime for any development realized with 5PM Pro, ASC's GUI development environment for front ending and client/server development. This makes 5PM Term one of the most versatile and evolutive terminal emulation products available for the Macintosh.

5PM Term + integrates in one single package emulation for: IBM mainframes implementing IBM-3270 over TCP/IP and SNA; IBM midrange AS/400 implementing IBM-5250 over TCP/IP and Token Ring; and Unix and DEC by implementing DEC-VT420 over TCP/IP, serial and LAT. In addition, 5PM Term + is shipped with IND$FILE, FTP client and Xmodem file transfer protocols.

5PM Term for AS/400 integrates in one single package emulation for IBM midrange AS/400 implementing IBM-5250 and 5250TN over TCP/IP and Token Ring, as well as FTP client and Xmodem file transfer protocols.

5PM Term for IBM Mainframe integrates in one single package emulation for IBM mainframes implementing IBM-3270 and 3270TN over TCP/IP and SNA, including Novell's NetWare for SAA gateway, as well as IND$FILE, FTP client and Xmodem file transfer protocols.

5PM Term for Unix/DEC integrates in one single package emulation for Unix and DEC hosts implementing DEC-VT420 over TCP/IP, serial and LAT, including Novell's NetWare for LAT gateway, as well as FTP client and Xmodem file transfer protocols.

Cray Term For Macintosh
Terminal emulation
Macintosh SE or larger; 1 MB of RAM (2 MB recommended); System 6.0.4 or later.

Cray Term for Macintosh is an enhanced terminal emulation software module that enables a Macintosh to communicate with host systems (e.g., IBM, Digital and Unix hosts) via a local area network. Cray Term for Macintosh provides LAN communications according to the Open Systems Interconnection (OSI) standards. It enables up to 10 simultaneous communications sessions on an Ethernet. To simplify operation, resources on the network are accessed by using names. All sessions are user configurable, and the setup can be stored so repeated use with commonly accessed systems is easy. All standard Macintosh facilities, such as multiple window operation, copy and paste to and from a communications session and MultiFinder, are supported. Cray Term for Macintosh is based on the Macintosh Communications Toolbox, ensuring future compatibility, including System 7, as well as integration with future communications tools from Apple or third-party developers.
$245 retail
Cray Communications, Inc.; 9020 Junction Dr.; Annapolis Junction, MD 20701; 301-317-7710 or 301-317-7220 (fax)

CTAccess And MacMenlo
Terminal emulation; mainframe communications
Macintosh Plus or larger.

CTAccess and MacMenlo are emulation products for Tandem to Macintosh connectivity. Both support block-mode, as well as conversational. MacMenlo provides asynchronous connection. CTAccess supports an open communication environment by providing access to virtually all standard communication protocols: LAN, WAN, remote and async. CTAccess allows users to run multiple host sessions, simultaneously. Both CTAccess and Mac Menlo provide color, adjustable font sizes, command macros, user-defined menus and full Macintosh user interface features.

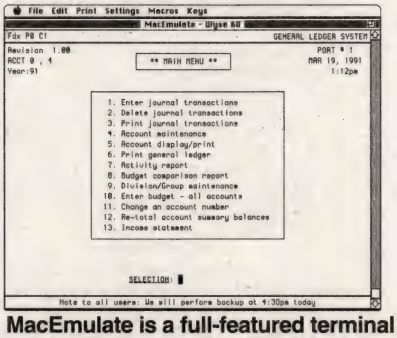
MacEmulate
Terminal emulator for Wyse, TeleVideo, Hazeltine, ADDS Viewpoint, VT100 and Data General
Macintosh Plus or larger.



MacEmulate is a full-featured terminal emulator that connects a Macintosh to multiuser computers using any of the following terminal types: Wyse 60, 50, 30; TeleVideo 905, 910+, 912, 920, 925, 950, 955; Hazeltine 1500; ADDS Viewpoint; VT100; and Data General 200, 210, 410. It is compatible with some ADM, Link and Esprit models. The new version supports Apple's Communications Toolbox to allow file transfer and network connections (such as TCP/IP Telnet). It includes multiple terminal sessions, multiple settings files, phone directory/dialing features, color preferences, text scrollback, resizeable/scrollable terminal windows and screen/printing font choices. MacEmulate also supports advanced terminal features, such as 132 columns, multiple terminal pages, remote printing, programmable keys, graphic and multinational characters, terminal status and label lines and display attributes (reverse, underline, etc.). It contains extensive setup dialogs and preferences, macros, cut/copy/paste, copy as table, screen text capture to disk or Clipboard and full keyboard support. MacEmulate is System 7 compatible.

NFS/Share
Provides access to remote NFS servers
Macintosh Plus or larger; Ethernet cards.

NFS/Share is a solution for Macintosh users wanting to take advantage of distributed file sharing within a multivendor environment. A standards-based NFS client implementation, NFS/Share utilizes Apple Computer's MacTCP for speed and system compatibility. NFS/Share offers the following features and capabilities: access to remote NFS servers; support of AppleSingle/AppleDouble file formats for foreign files; automatic mounting of multiple servers at start up, plus multiple NFS-client mounting of a common directory; user authentication via any one of four authentication daemons (NIS, PCNFSD, PCNFSD2 or BWNFSD); user access via Chooser; easy to use and operate; unsurpassed access speed and throughput; and host-resident implementation, no additional hardware required.

InterCon Systems Corp.; 950 Herndon Pkwy., Ste. 420; Herndon, VA 22070; 703-709-5500, 800-468-7266 or 703-709-5555 (fax)

Opal Emulsions Plus
Terminal emulations
Macintosh Plus or larger; System 6.0 or later.

Opal Emulations Plus is the latest step in the evolution of the Opal family of connectivity products. The features of the three original products, the Opal Emulations package, the Opal Developer and the OpalXfer, have been combined into one dynamic product. The new package provides a powerful set of tools that allow users to integrate a variety of host environments with their Macintosh systems. Features include a wide range of terminal emulations, sophisticated data capture, template-driven copy and paste, file transfer, keyboard programming and scripting language. Communication can be set up by serial cable, modem, TCP/IP Telnet interface or the Apple Communications Toolbox. File transfer protocols include Text Mode, Xmodem, Ymodem, MacBinary, Kermit and a proprietary OpalXfer protocol, which supports multivalued data transfers.
$295 retail

PathWay Access
Provides Macintosh users with TCP/IP-based file transfer and terminal emulations
Macintosh Plus or larger.

PathWay Access provides Macintosh users with TCP/IP-based file transfer and terminal emulations. With PathWay Access, users can transfer files between the Macintosh and any other computer that supports the open standard TCP/IP protocols. PathWay Access includes terminal emulations for DEC VT100, VT220, VT240, VT320, VT330 and VT340 terminals, as well as IBM 3278 Model 2, 3, 4 and 5 mainframe terminals. With this extensive terminal support, users can run most any mini- or mainframe-based applications on their Macintosh, so long as the host system supports the TCP/IP standards. Such open standard software is available for DEC VAX/VMS systems, ULTRIX and other Unix systems, and IBM mainframes running VM or MVS.
$295 retail; single license
The Wollongong Group, Inc.; 1129 San Antonio Rd.; Palo Alto, CA 94303; 415-962-7100 or 415-969-5547 (fax)

PathWay Client NFS
Provides Macintosh users with TCP/IP-based file and printer sharing
Macintosh Plus or larger.

PathWay Client NFS provides Macintosh users with TCP/IP-based file and printer sharing using the NFS (Network File System) protocols. With PathWay Client NFS, users can store files and share information with NFS servers by simply adding software to the Macintosh; no gateways or other hardware is required. NFS server software is a standard feature of ULTRIX and other Unix systems and is available for DEC VAX/VMS systems and IBM mainframes running VM or MVS. PathWay Client NFS also includes an LPR server component, which makes the Apple LaserWriter available to other TCP/IP-based systems on the network without limiting access to AppleTalk users.
$295 retail; single license
The Wollongong Group, Inc.; 1129 San Antonio Rd.; Palo Alto, CA 94303; 415-962-7100 or 415-969-5547 (fax)

PlotView 3.4
HP plotter emulation
Macintosh 512KE or larger.

PlotView emulates popular Hewlett-Packard plotters, such as the HP7475 and HP7550, and allows users to capture data from scientific instruments and other computers directly (via the modem port of a Macintosh) or to interpret files of HP-GL commands that have been imported into a Macintosh in some other way. PlotView converts HP-GL (Hewlett-Packard Graphics Language) commands into a Macintosh screen image. Pictures produced by the program are object oriented and can be either saved for later manipulation or moved to the Clipboard. Because many programs that run on IBM PCs can produce HP-GL output, a key application of PlotView is to facilitate data transfer from a PC to a Macintosh. The program has the capability to retransmit captured plots back to an HP or HP-compatible plotter. It also supports batch mode file conversion.
$119.95 retail
Stevens Creek Software; 21346 Rumford Dr.; Cupertino, CA 95014; 408-725-0424

ProcessTerm
ISC-80001G terminal emulation
Macintosh Plus or larger.

ProcessTerm provides Intercolor-80001G and Intercolor-8820 terminal emulation. The complete communications toolbox support of ProcessTerm allows it to connect via any type of modem or network. It can run in a small background window, allowing users to work on other projects while keeping an eye on critical indicators. When ProcessTerm alerts a user, a single click fills the screen with complete information. One Macintosh can be used to run several terminal emulations (including DEC VT, Tek 4105, etc.) simultaneously. ProcessTerm supports all Macs in black and white and color, all Systems through 7.1 and all screen sizes from 9 to 32 inches. It comes complete with an online help system, as well as technical support.

SBMac
Connects the versatile world of Macintosh with the powerful world of System Builder
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.5 or later.

With SBMac, users can enjoy the flexibility, creativity, imaging and screen building capabilities of System Builder on their host computers. And, with a simple click, connect these great features with the multitude of applications available on the Macintosh. Features include: transfer data, under host Basic commands, from the host to the Macintosh for use in Mac spreadsheets, databases, word processors and page-layout programs; display color pictures and movies on the Mac screen using the SB+ IMAGE command; browse through System Builder menus by clicking on the screen with the mouse; use System Builder's elegant shadow box screens; experience the fast screen updates of System Builder's Save/Restore feature; and utilize programmable, three-dimensional, push-button function keys. SBMac is System 7 compatible, 32-bit clean and supports Apple Events and QuickTime. In addition to System Builder, four other popular terminal emulators are included: Adds Viewpoint, Wyse 50, DEC VT101 and McDonnell Douglas Prism. "Enhance" Viewpoint mode is also supported.

TCP/Connect II
Fully-integrated TCP/IP networking package
Macintosh SE or larger; 2.5 MB of RAM (4 MB with System 7); appropriate LocalTalk gateway or Ethernet board; System 6.0.8 or later.

TCP/Connect II offers Macintosh or PCs all the functionality of TCP/IP connectivity with the easy-to-use interfaces of the Macintosh or Windows operating systems. Both versions provide terminal emulation with up to 20 simultaneous sessions, file transfer and user information features. They both offer full DEC VT240 emulation, including Regis graphics and regional/multinational character sets; the Windows version includes the VT320 emulation as well. Both versions also feature IBM tn3270 emulation and support both the IBM 3179-g graphics emulator and the 3278-2 through -5 series. The Mac version also provides the Tektronix 4010 and 4014 graphics terminal emulation, including zooming and panning, multiple fonts and copy/paste to graphics applications. TCP/Connect II contains full-featured FTP (File Transfer Protocol) client and server capability, allowing users to transfer files to and from their computer over a local TCP/IP network or the Internet. Both the Mac and Windows versions contain electronic news and mail services, including MIME support for Windows. TCP/Connect II operates over LocalTalk, Ethernet, Token Ring or SLIP.
$495 retail; TCP/Connect II-Extended for Mac, TCP/Connect II for Windows

Term For Macintosh
Communications software
Macintosh Plus or larger.

Term sets the access standard for serial and modem communications between almost any computer system in the world. It is complete, universally compatible communications software that gives users exact terminal emulation for interactive access. It provides exact emulations of VT220, VT100/102, SCO Color Console, ANSI, Wyse 50, Wyse 60 and nine other terminals on any physical display device. It also expands standard emulation features to include fully remappable keyboard capability, color support, 132 columns, transparent print, graphics line draw and multinational character support. Other features include: provides keystroke-for-keystroke compatibility across 15 operating systems; file transfer using a choice of any of nine public domain or proprietary protocols; and gives users Term Script Language, a fourth-generation tool for powerful, reliable automation of communications sessions, including polling and remote file transfer applications.
$195 retail
$649 retail; A/UX version

TextTerm+Graphics (Tekalike Version 3)
DEC VT100, Tektronix 4014, 4105, 4107, 4125 terminal emulation; mainframe communications; file transfers; built-in editor for electronic mail
Macintosh Plus or larger; System 6.0 or later.

TextTerm+Graphics supports background file transfers with MultiFinder and is a fast, flexible DEC VT100 text terminal emulator, as well as a Tektronix 4014 and 4105 graphic terminal emulator. Text and graphic displays may be combined or separated and large screens and color are supported. VT100 emulation supports character attributes (tabs, bold, underline, etc.), reverse scrolling, selection of text or tables for editing or saving and printing. With the built-in editor, a file can be opened, edited, saved and sent via electronic mail. Incoming mail can be captured, edited and resent. Tektronix emulation provides for the transfer of graphics from a mainframe to a Macintosh in MacPaint or MacDraw format for word processing or desktop publishing. High-quality printing and color plotting on Apple, Houston Instruments or Hewlett-Packard plotters is supported. Enhancements include 256 colors, windows, viewports compatible with the 4107, 4125 and 411x color terminals and supports the Apple Communications ToolBox.
$195 retail; low-cost upgrades available to registered owners
Mesa Graphics, Inc.; PO Box 600; Los Alamos, NM 87544; 505-672-1998

TGRAF-07/MAC
Tektronix graphics terminal emulation
Macintosh SE/30 or larger; 2 MB of RAM; 256-color card; System 6.0.2 or later.

Grafpoint's terminal emulation software gives users the power of a Tektronix Graphics Terminal using a Macintosh computer. With TGRAF-07/MAC, the Macintosh can communicate with a host through a serial port or over a TCP/IP network, enabling users to run thousands of mainframe applications that previously required a dedicated graphics terminal. TGRAF allows users to choose between the familiar Macintosh interface or the standard Tektronix set-up screen. On-screen selectable features make using a graphics terminal an intuitive task. TGRAF-07/MAC emulates Tektronix 4010, 4014, 4106/7 and 4109 models and DEC VT52, VT100 and VT102 alphanumeric terminals.

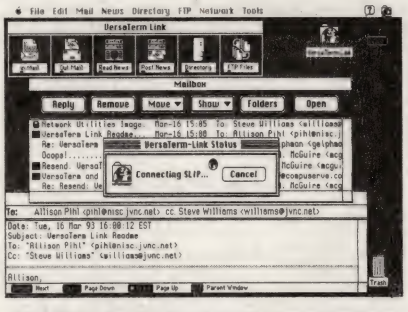
VersaTerm-Pro 5.0
Terminal emulations, file transfers, networking services
Macintosh Plus or larger; LocalTalk, Ethernet, modem or direct connect.



VersaTerm-Pro is a broad-based communications application combining high-quality, industry standard terminal emulations and the VersaTilities suite of network connections. The terminal emulations include: DEC VT100/VT220, Data Generals D210/D211 both with multiple sessions, plus Tektronix 4014/4015 color graphics emulations. The VersaTilities TCP/IP client suite focuses on exchanging data over Internet using a

smoothly integrated graphical interface for accessing mail, news, directory, Telnet and file transfers. With the VersaTerm SLIP extension, users transport TCP/IP data over a modem. Users can read mail, compose replies and create new mail messages all with or without a network connection. When users utilize dial-up via SLIP, a one-step command can automatically establish their connection, send their mail, check for new mail and disconnect. Users can subscribe to their favorite news groups, quickly connect and read items of interest. A unique feature allows users to download selected news items from anywhere in the world with the same ease as from their local Macintosh. Common host configurations are saved for convenient repetitive use. The tools and INITs provided by VersaTerm-Pro include: MacTCP (TCP/IP), VersaTerm-SLIP client, Time (client and server), VersaTerm-Server with up to 24 output ports, and Telnet with up to eight simultaneous sessions. File transfer protocols include Xmodem, Ymodem, Zmodem, Kermit and FTP (client and server). LAT, ADSP, modem and serial tools are also included.

Vicom MultiTerm
Terminal emulation/communications
Macintosh Plus, PowerPC or larger; System 6.0.5 or later (System 7.1.2 or later with PowerPC).

Vicom MultiTerm is a professional terminal emulation and communication package. Vicom MultiTerm includes VT420, VT320, VT220, VT102/100/52, Adds Viewpoint 50, DG211, ANSI, TTY, Videotex Minitel/Teletel and Videotex Prestel. Vicom MultiTerm has standard scripting with 110+ macro commands and the unique Vicom graphical interface editor, which allows the design of buttons, windows and menus for host-specific interfacing. Connections can be made using Vicom drivers, TCP/IP, LAT, Apple's Communication Toolbox (CTB) connection tools and Serial. FTP Client and FTP Server software is included.

Vicom Pro
Terminal emulation/communication
Macintosh Plus, PowerPC or larger; System 6.0.5 or later (System 7.1.2 or later with PowerPC).

Vicom Pro provides a powerful communication development environment in which to create Macintosh front ends to corporate host systems. By using Vicom's unique interface editor in conjunction with Vicom's SuperScript language, applications can be created for use with Vicom RunTime and Vicom MultiTerm. Features include a project manager with run-time debugger, support for Publish and Subscribe, AppleEvents, AppleScript and XCMDs. Vicom Pro includes terminal emulations for SNA•ps 5250 and SNA•ps 3270, TN5250, TN3270, VT340 & VT241 (ReGIS), VT420, VT320, VT220, VT100/52, VIP7800 WP VIP7824, WYSE 60, WYSE 50, SCO ANSI, ANSI, TV1950, TV1925, DG410, DG211, MCG3101, Adds Viewpoint 50, TTY, Videotex Minitel/Teletel and Videotex Prestel. Connections can be made using Vicom drivers, TCP/IP, LAT, Apple's Communication Toolbox (CTB) connection tools and Serial. FTP Client and FTP Server are included.

Desktop Communications/ Macintosh To Basic-Four

Mac/B4
Macintosh to Basic-Four terminal emulation
Macintosh Plus or larger.

Mac/B4 is a software modification that allows a Macintosh to directly replace a standard Basic-Four terminal. No hardware changes are necessary to run Mac/B4, just connect the Macintosh to the Basic-Four data cable with proper wiring and start up Mac/B4. Mac/B4 allows users many added features to work with over a standard terminal, and allows users to work with a Basic-Four system and have the Macintosh user interface and all its assets. User may select many different parameter settings other than those needed to work with the Basic-Four. Because of this, Mac/B4 may be used as a general-purpose communications program, as well as an interface to the Basic-Four. Full file transfers between the Macintosh and Basic-Four, as well as slave printing, are supported. It will also work with all Business Basic-compatible machines.

FlexCom — alsT27 Poll/Select Terminal Tool
Enables Macintosh computers to emulate Unisys Poll/Select terminals
Macintosh Plus or larger; System 6 or 7 with CTB application.

FlexCom is a software architecture designed by Air Land Systems for Apple Macintosh users. The design is based on Apple's Communications Toolbox (CTB). FlexCom allows for standardized modular software products (Tools) to be linked together for easy configuration and operation in a user's application. FlexCom provides for an extremely flexible mode of communication, allowing users to design various applications, interconnect to one or more Host/Mainframe computers and/or transfer data. The alsT27 Poll/Select Terminal Tool enables Macintosh computers to emulate Unisys Poll/Select terminals while maintaining Apple's user friendly interface. This feature rich emulator allows users to enter data, customize text displays, as well as transfer, save and print files. It has tear-off command and function boxes, giving users the flexibility to arrange the boxes in a style that best suits the way they work.

Desktop Communications/ Macintosh To Data General

FrontEnd
Macintosh mainframe communications with user interface utility for host software; Data General D210, D211, D214, D215, D216 or D410 and VT100 terminal emulation
Macintosh 512K or larger.

FrontEnd provides a Macintosh interface for minicomputers and mainframes. Using simple command codes similar to terminal commands, the host can control multiple windows, send data to any of the windows, resize windows and more. There are two different window formats available to the host application. The host can send data to "List Windows," grid-like windows similar to spreadsheets or databases that support full scrolling and selection according to the Macintosh User Interface Guidelines. It also allows the host to create "Text Windows" of free-form copy utilizing the standard Macintosh text-editing interface. The basic terminal emulation features of the program include Data General D210, DEC VT100 and TTY emulation, macros, file transfers and function-key templates.

Desktop Communications/ Macintosh To DEC

5PM Term
Multisession communication application
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later.

These Products Available Through Bottom Line Distribution
1-800-347-1923

5PM Term is a powerful multisession communication application with full support for Apple's Communications Toolbox (i.e., connection, file transfer and terminal tools). 5PM Term enhances basic terminal emulation by offering a macro-command scripting environment to automate log-on procedures, attach macros to keyboard keys and define hotspots. In addition, 5PM Term acts as a runtime for any development realized with 5PM Pro, ASC's GUI development environment for front ending and client/server development. This makes 5PM Term one of the most versatile and evolutive terminal emulation products available for the Macintosh.

5PM Term + integrates in one single package emulation for: IBM mainframes implementing IBM-3270 over TCP/IP and SNA; IBM midrange AS/400 implementing IBM-5250 over TCP/IP and Token Ring; and Unix and DEC by implementing DEC-VT420 over TCP/IP, serial and LAT. In addition, 5PM Term + is shipped with IND$FILE, FTP client and Xmodem file transfer protocols.

5PM Term for AS/400 integrates in one single package emulation for IBM midrange AS/400 implementing IBM-5250 and 5250TN over TCP/IP and Token Ring, as well as FTP client and Xmodem file transfer protocols.

5PM Term for IBM Mainframe integrates in one single package emulation for IBM mainframes implementing IBM-3270 and 3270TN over TCP/IP and SNA, including Novell's NetWare for SAA gateway, as well as IND$FILE, FTP client and Xmodem file transfer protocols.

5PM Term for Unix/DEC integrates in one single package emulation for Unix and DEC hosts implementing DEC-VT420 over TCP/IP, serial and LAT, including Novell's NetWare for LAT gateway, as well as FTP client and Xmodem file transfer protocols.

asc420
Provides DEC VT420 terminal emulation
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later.

asc420 is a terminal emulation tool. It provides DEC VT420 terminal emulation and can be used by any communications application that works with the Communications Toolbox. Full key mapping lets users choose a character set for the keyboard and use DEC keys even if they do not appear on the Macintosh keyboard. Visual indicators are available to replace the indicators that usually appear on the DEC keyboard. These indicators show when the terminal is online, using local echo, pausing while users read text that is being written to the screen and waiting for the host.

eXodus
Rootless/rooted color X-Window System display server
Any Macintosh; 4 MB of System RAM; 2 MB of application RAM; hard disk drive.

eXodus is an X Window System display server for the Macintosh. Whether users use a Classic or a Quadra, eXodus for the Macintosh seamlessly delivers host-based X applications to the user's Macintosh desktop. Based on Release 5 of the X Window System, eXodus supports all the latest industry standards and takes users far beyond the limitations of an X terminal. Powerful features include: built-in FTP file transfer support, complete printing capabilities, XDMCP support, networked font server support and copy/paste between Macintosh and X applications. Monochrome, as well as color X screens are supported with three window management options: rooted (remote) and rootless (Macintosh or MOTIF). Special integration support for Sun's OpenWindows, Digital's DECWindows and MOTIF environments is included, as well as all the networking software required for DECnet and TCP/IP connections. eXodus is also available for the Microsoft Windows and DOS platform.

Graphical Systems Manager (GSM)
VAX system and network management
Macintosh Plus or larger.

Graphical Systems Manager (GSM) allows the management of networked VAX and Unix machines from a Macintosh or X-Windows Display Server (VAX station). All pull-down menus, dialog boxes and command functions are determined by a user. GSM allows the system manager to treat groups of VAXs as a single management domain. Grouping can be by node, cluster or any user-determined configuration. GSM will notify the system manager of any system or network shutdowns and will automatically reconnect to a remote system when it returns online. Each user of GSM can have customized menus, windows and command sets. Command, window and dialog definitions can be shared with other users or combined with private or group definitions. GSM allows users to select processes, batch jobs, network lines and other user-defined items with a click of the mouse. Once one or more items have been highlighted in a Macintosh window, commands can be performed on this set of items with a single pull-down menu on many VAX nodes. A user can request confirmation before a command is performed. Twenty-eight simultaneous windows of VAX information can be opened. A user is free to resize, move or close them with the mouse. Windows can be updated at a user's request or at regular time intervals.
$995 and up retail; price based on VAX size and number of nodes
Integrated Solutions, Inc.; 1020 8th Ave.; King of Prussia, PA 19406; 215-660-0781 or 215-664-3646 (fax)

Mac320
DEC VT320 text-only terminal emulation
Any Macintosh; hard disk drive; 600K of application memory.

The Mac300 Series is a complete family of DEC VT300 Series emulation software for the Macintosh. Mac320 turns a Macintosh into a VT320 text-only terminal. While true VT320 terminals provide only monochrome support, Mac320 adds color text and background capabilities for those with color monitors. Mac320 is capable of running multiple sessions and is System 7 compatible. Users can choose from FTP, Xmodem, Ymodem and Kermit to perform protocol file transfers. White Pine's emulators provide fast, reliable network connections to any VAX or Unix host computer and come complete with the necessary software for making LAT, TCP/IP, direct serial or modem connections. Mac320 comes with QuicKeys Lite for automated logon and "The Power of Macros."
$199 retail; site licenses, multiuser packs and other special discount programs are available
White Pine Software, Inc.; 40 Simon St., Ste. 201; Nashua, NH 03060; 603-886-9050, 800-241-7463 or 603-886-9051 (fax)

Mac320 Lite
DEC VT320 text-only terminal emulation
Any Macintosh; hard disk drive; 600K of application memory.

The Mac300 Series is a complete family of DEC VT300 series emulation software for the Macintosh. Mac320 Lite provides the same full-featured terminal emulation for text as White Pine's Mac320 connectivity software package. It is called Lite because it includes only that communications software required for standard serial line connections. With Mac320 Lite, Macintosh users can connect to a host using a direct serial line or modem and take full advantage of the features of both the Macintosh and host computer. While true VT320 terminals provide only monochrome support, Mac320 adds color text and background capabilities for those with color monitors.
$99 retail; site licenses, multiuser packs and other special discount programs are available
White Pine Software, Inc.; 40 Simon St., Ste. 201; Nashua, NH 03060; 603-886-9050, 800-241-7463 or 603-886-9051 (fax)

Mac330
DEC VT330 text and graphics terminal emulation
Any Macintosh; hard disk drive; 700K of application memory.

The Mac300 Series is a complete family of DEC VT300 Series emulation software for the Macintosh. Mac330 turns a Macintosh into a VT330 text and monochrome graphics terminal. Mac330 emulation supports ReGIS, SIXEL and Tektronix 4010/4014 graphics. While true VT330 terminals provide only monochrome support, Mac330 adds color text and background capabilities for those with color monitors. Mac330 is capable of running multiple sessions and is System 7 compatible. Users can choose from FTP, Xmodem, Ymodem and Kermit to perform protocol file transfers. White Pine's emulators provide fast, reliable network connections to any VAX or Unix host computer and come complete with the necessary software for making LAT, TCP/IP, direct serial or modem connections. NAServer Administrator
Makes Pathworks administration quick and easy
Macintosh LC or larger (client); Pathworks for Macintosh 1.0 or later; System 6.0.5 or later; VAX server; VMS OS 5.3 or later; Pathworks for VMS 4.0 or later.

NAServer Administrator is a client/server software package that allows network managers to administer

Digital Equipment Corp.'s Pathworks servers from either a Macintosh or Windows-based workstation. The software package is designed to provide an easy-to-use, point-and-click graphical user interface to support Digital's PC and Macintosh Pathworks LAN services without having to use the complex VMS DCL command structure. NAServer Administrator uses the DECnet protocol and a Macintosh or Windows-based PC to access a Pathworks server via Ethernet or LocalTalk. The interface allows users to add, change or delete users, change security access for directories and folders and manipulate print queues and services.
$1,990 starting price retail; one to 20 users per server
Webster Computer Corp.; 2109 O'Toole Ave., Ste. J; San Jose, CA 95131; 408-954-8054, 800-457-0903 or 408-954-1832 (fax)

PacerConnect
Terminal services for VMS
Macintosh Plus or larger; System 6.0.4 or later; any VAX running VMS 5.4 or later.

PacerConnect is a terminal emulation and file transfer package that takes advantage of Apple's standard AppleTalk Data Stream Protocol (ADSP). When used with any Macintosh Communications Toolbox application, such as PacerTerm, users can connect to multiple VAXes over any AppleTalk network with fast, reliable results. PacerConnect offers significant performance advantages over LAT for all file transfers. ADSP connection and PacerFT file transfer tools are included for the Macintosh, along with ADSP terminal server and file transfer server software for the VMS host. This solution is fully integrated with the host file transfer software. PacerConnect also supports transfers using industry standard protocols: Zmodem, Xmodem and Kermit. Users select their VMS host with familiar Chooser-like commands; there's no need to configure complicated IP addressing. Network administration is transparent, easy and reliable.
$2,000 per host retail;(free with 25 copies of PacerTerm) supports unlimited number of users
Pacer Software, Inc.; 1900 West Park Dr., Ste. 280; Westborough, MA 01581; 508-898-3300, 800-722-3702 or 508-366-1356 (fax)

Path/Remote 2.2
Macintosh to VAX/VMS connectivity product
VAX; Macintosh Plus or larger; AppleTalk for VMS 3.0; System 7 and ARA 2.0, VMS 5.4-3 or later.

Path/Remote is VAX-based software that allows Macintosh users to dial into a VAX/VMS system and use Mac to VAX connectivity products, such as DEC PathWorks For Macintosh over ordinary asynchronous terminal lines. Because Path/Remote is based on Apple's AppleTalk for VMS, it also allows a client Macintosh to communicate with all of the AppleTalk-based facilities in the entire organization through the VAX host. For users connected locally over dedicated, asynchronous lines, Path/Remote offers low-cost AppleTalk networking using their existing VAX terminal port hardware. It also delivers AppleTalk services to Macintosh users — including users of the Macintosh PowerBook — over ordinary dial-up lines, using existing modem equipment.
Call for pricing; priced by number of concurrent users
Computer Methods Corp.; 525 Rte. 73 South, Ste. 300; Marlton, NJ 08053; 800-969-4360 or 609-596-4362 (fax)

Reflection 2 Plus For The Macintosh
VT320 terminal emulation
Macintosh Plus or larger.

Reflection 2 Plus offers Macintosh users access to data and applications on Digital VAX or Unix-based host computers. It can be used for accurate VT320, VT220, VT120 or VT52 terminal emulation from a Macintosh. Reflection 2 will display up to 132 columns and double-high, double-wide characters. Reflection's proprietary, high-speed file transfer allows users to share files with Digital VAX or Unix-based computers. Kermit and Xmodem support is also included. Direct and modem connections are supported, as well as network connections over Pacer and Alisa. Reflection 2 Plus includes Apple's Communications Toolbox and basic connection tools. Alternate data paths, such as TCP/IP, Telnet and Digital's LAT are supported. The Plus feature offers the ability to back up Macintosh files to the host. Now with multisession capability.
$229 retail
Walker Richer & Quinn, Inc.; 1500 Dexter Ave. N; Seattle, WA 98109; 206-217-7500, 800-872-2829 or 206-217-0293 (fax)

Reflection 4 Plus For The Macintosh
VT340, VT330, VT320, VT241, VT240, VT220, VT102 or VT52 emulation
Any color-capable, 68020 or larger Macintosh; color or gray-scale monitor.

Reflection 4 Plus for the Macintosh offers complete VT340 graphics emulation. Support is provided for ReGIS 16-color and Sixel graphics. Reflection's proprietary, high-speed file transfer allows users to share files with Digital VAX or Unix-based computers. Kermit and Xmodem support is also included. Apple's Communications Toolbox and basic connection tools are also supplied. Direct and modem connections are supported, as well as network connections over Pacer and Alisa. Alternate data paths, such as TCP/IP, Telnet and Digital's LAT are supported. The Plus feature offers the ability to back up Macintosh files to the host.

SequeLink
SQL connectivity software
Macintosh Plus or larger; 2 MB of RAM; System 6.0 or later.

SequeLink is a unique software product called Client/Server middleware. It is a comprehensive software solution that provides direct, transparent SQL access to data and services from within a wide range of client applications. SequeLink offers connectivity solutions to Oracle, DB2, SQL/DS, Ingres, Sybase, AS/400, Informix, Rdb, OS/2 DBM, SQL server, Supra, Progress, Adabas, System 1032, Interbase, Teradata and more running on Unix, VMS, MVS, VM, OS/2 and AS/400. SequeLink supports the following protocols on Macintosh: AppleTalk, DECnet, APPC (SNAPS) and TCP/IP (Mac TCP). Some of the client applications that are supported on Macintosh include: GQL, Omnis 7, Data Prism, Cross Target, Excel, Clear Access, Kappa PC, Wingz, Smalltalk and 4th Dimension. A C library is also available for custom application development. SequeLink enables a wide range of tools and environments with client/server functionality. This leaves a user free to select the optimum information management components, regardless of inherent client/server capabilities.

TSSnet
Allows a Macintosh to function in a DEC networking environment as a DECnet end node
Macintosh with 2 MB of RAM; System 7.0 or later.

TSSnet for Macintosh provides the Macintosh with a direct connectivity link between Macintosh computers, Unix systems with TSSnet and DEC VAX/VMS machines, enabling the Macintosh to communicate in a DECnet networking environment an end node. TSSnet for Macintosh also allows any Mac to function as a DECnet Level 1 Router, and offers LAT terminal capabilities for any Mac configured for Ethernet. Also provided is the ability to create network virtual disks on remote DECnet or TSSnet nodes. By using container files for virtual disk access, the remote DECnet systems require no special hardware or software to utilize this feature. TSSnet for Macintosh DECnet services include bi-directional file transfer, remote backup, user name and password protection and full wildcard specifications. TSSnet electronic mail capabilities allow bi-directional, window-based message editing and link the VMS Mail-11, ALL-IN-1, Unix and Mac Mail systems. Full support of the Macintosh Communications Toolbox includes LAT, CTERM and DECnet task-to-task capabilities. Also featured in TSSnet for Macintosh are White Pine Software's newly enhanced Mac320 terminal emulator, as well as network management monitoring and troubleshooting tools.

Desktop Communications/ Macintosh To Hewlett-Packard

DeskDirect
Allows Reflection users to distribute Macintosh files through HPDeskManager
Macintosh 512K or larger; Reflection 1 Plus or 3 Plus for the Macintosh V3.2 or later; HP 3000.

DeskDirect is a file transfer utility that works with HP's DeskManager to direct files between the HP 3000 and Macintosh. DeskDirect's commands are executed from within DeskManager, HP's electronic mail system. DeskDirect saves users time by sending a file directly from HP Desk without the need to access MPE. The file transfer is performed by either Reflection 1+ or 3+ for the Macintosh, terminal emulation software. HP Desk takes care of the addressing and distribution of the file. Reflection's accurate and fast file transfer allows users to send, receive and print all kinds of files through DeskManager.
$99 retail; per Mac
$500 retail; per HP3000 host
Walker Richer & Quinn, Inc.; 1500 Dexter Ave. N; Seattle, WA 98109; 206-217-7500, 800-872-2829 or 206-217-0293 (fax)

Mac-3000
Hewlett-Packard 2392, DEC VT100 and IBM 3278 terminal emulation; file transfers
Macintosh 512K or larger.

Mac-3000 provides full HP block-mode and Hewlett-Packard HP-2392A, DEC VT100, IBM 3278 and TTY terminal emulations. The program offers file-transfer capabilities for uploading and downloading ASCII and Binary files, as well as the ability to communicate with a variety of computer and electronic information services. Other features include: 70-page display memory; extensive local printing and editing; extended screen memory; user defined on-screen function keys; HP screen enhancements; auto-dialing; default configurations; telephone number storage; support of the AppleTalk network and LaserWriter; and more.

MacLinkPlus/HP Palmtop
Bi-directional file translation
Macintosh Plus or larger; System 6.0.3 or later; 1 MB of RAM.

MacLinkPlus/HP Palmtop is the complete solution for translating, transferring or simply backing up files between the users Palmtop and Macintosh. With a file translation library of more than 100 combinations, users can convert their Memo, Lotus 1-2-3, Appointment Book, Phone Book, NoteTaker and Database files to and from the most popular word processing, spreadsheet, database and PIM file formats for the Macintosh. MacLinkPlus also includes Phone Book and Appointment Book equivalent Macintosh file templates for such applications as Microsoft Works, Microsoft Excel and FileMaker Pro. In addition, intermediate file formats like SYLK can be used to translate and exchange files with various applications, such as FileMakerPro and TouchBase. Serial cable and communications software are included.

NS Connection For The Macintosh
Provides connectivity between Macintoshes and an HP 3000
Macintosh Plus or larger; 1 MB of RAM; Reflection 1 Plus or 3 Plus for the Macintosh.

The NS Connection works with Apple's MacTCP as a connection tool within Apple's Communications Toolbox to give access to HP 3000 host computers running HP's Network Services. The NS Connection supports host connections over Ethernet or LocalTalk networks while maintaining connections to other network services, such as file servers and laser printers. The NS Connection operates with Reflection Series software, which offers quality terminal emulation and extra features, such as a powerful command language

These Products Available Through Bottom Line Distribution
1-800-347-1923

and high-speed file transfer. Choosing a host and configuring a connection is as easy as clicking a few options in a Macintosh dialog box.

Reflection 1 Plus For The Macintosh
HP 2392A terminal emulation/communications
Macintosh Plus or larger.
Reflection 1 Plus provides precise Hewlett-Packard 2392A alphanumeric terminal emulation to run HP 3000 applications and access data from a Macintosh. Reflection 1 Plus is block- and character-mode compatible and supports inverse video, underlining, half bright and security options. It was designed with the familiar Macintosh interface and features in mind. Reflection includes context-sensitive help and multitasking with MultiFinder. Fast and reliable Reflection file transfers and terminal sessions will continue to process in the background while users use another Macintosh application. The Plus feature allows users to back up important Macintosh files to the host. A command file is included to automate the backup and restore processes. Reflection's powerful command language of more than 50 Basic-like commands and functions helps to simplify daily routines.

Session
Hewlett-Packard and DEC terminal emulation and file transfer
Macintosh 512K or larger; HP 3000, 9000 or 1000 or DEC.
Business Session and Graphic Session provide HP 700/92, HP 2392A, DEC VT100 and HP ANSI terminal emulation for Macintosh users. Graphic Session also provides HP 2397A terminal emulation. They allow users to access the data, applications and storage capacity of an HP or other host computer. Session is fully compatible with System 7 and A/UX, and provides support for color displays, Apple Events, online balloon help and multitasking. They support the Apple Communications Toolbox for connection to a host over serial, X.25 or LAN networks, including AppleTalk, Ethernet and MacTCP. Users can log host data to printers or disk files, and automate any task using the TermTalk scripting language and its built-in script editor and recorder. Session can play a key role in the integration of data between different applications or computer systems. Data can be moved between the Macintosh and the host via background file transfers or simple cut and paste operations.

Desktop Communications/ Macintosh To Honeywell

FlexCom — alsVIP7800 Terminal Tool
Enables Macintosh computers to emulate Honeywell/Bull terminals
Macintosh Plus or larger; System 6 or 7 with CTB application.
FlexCom is a software architecture designed by Air Land Systems for Apple Macintosh users. The design is based on Apple's Communications Toolbox (CTB). FlexCom allows for standardized modular software products (Tools) to be linked together for easy configuration and operation in a user's application. FlexCom provides for an extremely flexible mode of communication, allowing users to design various applications, interconnect to one or more Host/Mainframe computers and/or transfer data. The alsVIP7800 Terminal Tool enables Macintosh computers to emulate Honeywell/Bull terminals while maintaining Apple's user friendly interface. This feature rich emulator allows users to enter data, customize text displays, as well as transfer, save and print files. It has tear-off command and function boxes, giving users the flexibility to arrange the boxes in a style that best suits the way they work.

mxConnect 4.0
Macintosh to Honeywell Bull, Data General, DEC, Meditech and Pick systems
Macintosh Plus or larger; 1 MB of RAM.
mxConnect emulates the Honeywell Bull VIP7200/VIP7300/VIP7700/VIP7800 and HDS/BDS series of asynchronous and synchronous display terminals. It also emulates Data General Dasher D100/D200/D400, DEC VT52/VT100/VT200/VT300, ANSI 3.64, ADDS Viewpoint, Hazeltine 1500 series, TeleVideo 900 series, Lear Siegler, PC Term, Zentec 8000, Meditech 5220, Wang VS 2110 and Wyse 50 terminals. Features include: multiple communications protocol support (asynchronous, VIP synchronous, VIP server, TCP/IP and Communications Toolbox), script processing for automatic logon and logoff, 28 user-programmable and selectable command keys, print redirection, print spooling to a laser printer, 72-line scroll, color attribute mapping, balloon help and copy/paste between host sessions and Macintosh documents. Kermit, Xmodem, Ymodem, Zmodem and mxFTF file transfer capabilities, including host initiated, unattended mode and background operation are provided with this Macintosh to mainframe link product.

Desktop Communications/ Macintosh To IBM Minicomputers & Mainframes

"Both."
Legacy-to-SQL client/server development environment
Macintosh Plus or larger; System 6.0.5 or later.
"Both." is a development environment for building client/server applications. From beginning to end (from GUI design to host coupling and managing data sources), "Both." is designed to help IS departments incrementally migrate host-based applications up the client/server curve. "Both." is designed to enable users to preserve their investment in GUI development — even as they migrate to high-end client/server. By providing users with an innovative data source manager (DSM), "Both." enables users to retain their client application logic and presentation while, behind the scenes, migrating to different data sources (SQL, LU6.2, etc.) incrementally, over time. Finally, "Both." is architected for rapid development, enabling users to create new, easy-to-use production-quality cooperative applications in a matter of weeks, not months. "Both." lets users work with multiple dissimilar mainframe and midrange hosts simultaneously — accessing, navigating, passing data between, integrating and updating multiple applications and data sources. Equally important, however, "Both." provides a complete GUI Application Development Toolkit and employs a unique object-based architecture that automates much of the front-end/back-end coupling effort. It deploys to both Macintosh and MS Windows.

5PM Term
Multisession communication application
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later.
5PM Term is a powerful multisession communication application with full support for Apple's Communications Toolbox (i.e., connection, file transfer and terminal tools). 5PM Term enhances basic terminal emulation by offering a macro-command scripting environment to automate log-on procedures, attach macros to keyboard keys and define hotspots. In addition, 5PM Term acts as a runtime for any development realized with 5PM Pro, ASC's GUI development environment for front ending and client/server development. This makes 5PM Term one of the most versatile and evolutive terminal emulation products available for the Macintosh.
5PM Term + integrates in one single package emulation for: IBM mainframes implementing IBM-3270 over TCP/IP and SNA; IBM midrange AS/400 implementing IBM-5250 over TCP/IP and Token Ring; and Unix and DEC by implementing DEC-VT420 over TCP/IP, serial and LAT. In addition, 5PM Term + is shipped with IND$FILE, FTP client and Xmodem file transfer protocols.
5PM Term for AS/400 integrates in one single package emulation for IBM midrange AS/400 implementing IBM-5250 and 5250TN over TCP/IP and Token Ring, as well as FTP client and Xmodem file transfer protocols.
5PM Term for IBM Mainframe integrates in one single package emulation for IBM mainframes implementing IBM-3270 and 3270TN over TCP/IP and SNA, including Novell's NetWare for SAA gateway, as well as IND$FILE, FTP client and Xmodem file transfer protocols.
5PM Term for Unix/DEC integrates in one single package emulation for Unix and DEC hosts implementing DEC-VT420 over TCP/IP, serial and LAT, including Novell's NetWare for LAT gateway, as well as FTP client and Xmodem file transfer protocols.

commstalk For HyperCard
Allows developers to fully integrate terminal communications sessions within a HyperCard stack
Macintosh Plus or larger; HyperCard 2.1 or later; System 6.0.5 or later.

commstalk for HyperCard (commstalk-hc) allows developers to fully integrate terminal communications sessions within a HyperCard stack, bringing the benefits of client-server computing to older, non-SQL-based host applications. By reengineering host systems with improved HyperCard-based graphical interfaces, organizations can preserve their investments in aging applications and extend their useful life, without disruption. Applications developed with commstalk-hc can simultaneously communicate with multiple host systems utilizing standard Apple Communications Toolbox (CTB) tools. Connectivity options exist for IBM (5250, 3270), DEC (VT-100, VT-320, VT-420) and Unix (TCP/IP, Telnet, FTP), as well as a variety of standard asynchronous file transfer protocols (X/Y/Zmodem, Kermit, Text). Host data can be fully integrated with locally held stack data to provide completely integrated, cooperative applications. Developers using commstalk-hc benefit from dramatically reduced development time, easy maintenance of applications and reduced host loading.

DCA Irma Graphics For The IBM Mainframe
Allows users to access IBM mainframe graphics applications through the Irma family of terminal emulation products.
Macintosh with 68030 processor or larger.

DCA Irma Graphics is a software product that lets users of Macintosh computers access IBM mainframe computer graphics applications through DCA's Irma family of IBM 3270 terminal emulation products. And with Irma Graphics users can upgrade Irma for the IBM mainframe, DCA's multiple session 3270 emulator, to a full-featured APA graphics terminal. DCA Irma Graphics allows users to access host-based graphics applications, such as CA-TELLAGRAF, SAS/GRAPH and IBM Interactive Chart Utility to produce graphics for business presentations and reports.

Extra! For Macintosh
Full 3270 functionality for Macintosh users
Macintosh Plus or larger; 1 MB of RAM (2 MB with System 7); System 6.0.5 or later.

Extra! for Macintosh provides powerful, yet simple workstation to host connectivity. Full 3270 terminal emulation with multiple sessions is provided. Mainframe session screens are scalable and can be sized, colored and independently positioned. Background batch file transfer is as simple as point and click. File transfers supported are IBM's IND$FILE for VM/CMS, MVS/TSO and CICS. OV/MVS import/export is also supported. The 3287 printer emulation feature provides users with full function local printing capability. Extra! provides graphical keyboard remapping and a SmartPad keypad. A light pen is supported. Extra! connectivity is via coax DFT, 802.2 over token ring or AppleTalk LAN connections. LAN connections may be shared with PCs via the Attachmate Gateway multiple protocol support.

FTPack
File transfer tool designed to support multihost/multisession connections using the FTP file transfer protocol
Macintosh Plus or larger; 1 MB of RAM; Macintosh Communications Toolbox 1.0 or later; MacTCP 1.0.1 or later; System 6.0.4 or later.

FTPack is a file transfer tool for the Communications Toolbox (CTB) architecture. It is designed to support multihost/multisession connections using the FTP file transfer protocol over any TCP/IP connection. FTPack can be used under the control of CTB-compliant applications or interactively under direct user control with the comfort of a user friendly client interface, a fully mouse-driven graphic environment, where clicking on icons triggers standard FTP commands and a scrolling list presents files and directories. This information can be automatically recorded in a text log file to keep track of all operations. The windows are fully resizable by moving the window border up or down to increase readability of the log file. Transfers can be carried out in transmit or receive mode. File contents can be viewed before transfer for control. The user interface is designed to offer maximum comfort and flexibility, but it can also be reduced to a single command line interface if needed. Security standards can be enforced by using the installer utility to enable or disable user access to the configuration functions.

LANtastic For Macintosh Windows Gateway Software
Connect Macintosh computers to a LANtastic PC network
System 6.0.1 or later; non-dedicated gateway 386 or 486 PC; LANtastic system 4.0 or later; PC network adapter that supports the LANtastic network; AppleTalk, EtherTalk, Token Ring PC adapter or any adapter supported by LANtastic for Macintosh Windows Gateway drivers; MS-DOS 3.3 or later; Windows 3.1 or later.

The LANtastic for Macintosh Windows Gateway is a non-dedicated Windows version of the LANtastic for Macintosh product. This software allows a non-dedicated Windows PC to act as a gateway that provides interactivity between Macintosh AppleShare and LANtastic networks. The gateway PC provides networked Macintosh users with transparent access to LANtastic network resources, such as files, printers and CD-ROM drives. For LANtastic network users to have access to Macintosh file resources, Macintosh users must save their files to the gateway PC. This software also supports complete bi-directional PostScript printer sharing from both Macintosh and LANtastic networks. The LANtastic for Macintosh Windows Gateway software includes native ODI drivers that support adapters from major Ethernet manufacturers, such as 3Com, Intel, Xircom and SMC, as well as those from Artisoft.
$649 retail; software only
Artisoft, Inc.; 2202 N. Forbes Blvd.; Tucson, AZ 85745; 602-670-7100, 800-233-5564 (sales) or 602-670-7101 (fax)

Maclan Connect For LANtastic
Integrates Macintosh computers and printers into any 4.0 or later version of LANtastic
IBM or compatible PC/XT/AT/386/486; 640K; AppleTalk interface card; DOS 3.3 or later; any Macintosh.

Maclan Connect for LANtastic is a software gateway that seamlessly integrates Macintosh computers and printers into any 4.0 or later version of LANtastic. With Maclan Connect for LANtastic, Macintosh users can now access hard drives, LAN volumes, CD-ROM drives and PostScript printers that exist within any LANtastic network. All print requests from a Mac or a PC are routed through LANtastic print queues to any PostScript printer. The printers can be located on either the LANtastic or Macintosh side of the network. Printers may be connected via serial, parallel or AppleTalk interfaces. Print queues are managed by the Artisoft "Net-Print Queue Management" option. Maclan for LANtastic software runs concurrently on any PC serving as a LANtastic file server, or a separate workstation may be dedicated to Maclan.

NetLynx/Mac
Macintosh interface for Andrew NetLynx gateways
Macintosh Plus or larger; AppleTalk network; System/36/38, AS/400; optional host file transfer utility software; System 6.0.5 or later.

NetLynx/Mac is a software product that provides a Macintosh client interface for users of Andrew

These Products Available Through Bottom Line Distribution

NetLynx LAN gateways. Using NetLynx/Mac and NetLynx/5394 gateway, users can connect any Macintosh to an IBM system 3/X or AS/400. NetLynx/Mac provides a LAN-to-IBM midrange solution that allows both Macintoshes and PCs on a network to access the midrange using one gateway. NetLynx/Mac comes with the standard Apple installer program for easy one-button installation. Also, NetLynx/Mac installs the MacIPX protocol stack from Novell Inc. (included with NetLynx/Mac) to provide an IPX protocol access to the NetLynx gateway. NetLynx/Mac will work with any Macintosh on LocalTalk, EtherTalk or Token Ring. Both AppleTalk and IPX protocols can be used simultaneously from the client Macintoshes. Using Andrew's ETU (Emulator Transfer Utility) host-based file transfer software, data can be transferred in both directions between the System3/X or AS/400 and Macintoshes.
$200 to $5,695 retail; depending on configuration

NetWare 3270 LAN Workstation for Macintosh
Full 3270 functionality for Macintosh users needing SAA connectivity
Macintosh Plus or larger; 2 MB of RAM; System 6.0.3 or later.

Workstation for Macintosh is an IBM 3270 emulator specifically designed for use with IBM host connectivity NetWare for SAA. Productivity is enhanced by support of up to 26 concurrent terminal sessions per workstation, allowing users access to multiple SNA hosts. Terminal sessions can be individually tailored with dynamic color, keyboard remapping and automatic font sizing, giving users a high degree of flexibility. It easily shares host connections with DOS and Windows PCs in a NetWare LAN.

Packet/3270 Mac
Worldwide Macintosh to mainframe software connection
Macintosh Plus or larger; 401K of free RAM; asynchronous modem; connection to a packet network; local PAD or IBM 3708.

Packet/3270 Mac is the Macintosh workstation component for Telepartner International's micro-to-mainframe communications software. It is an SNA/ASYNC 3270 emulator for Macintosh computers that provides common, worldwide access to IBM 3270 SNA mainframe application systems via dial-up and public packet networks. Packet/3270 Mac integrates Packet/3270's reliability and ease of use with the familiar Macintosh interface, including pull-down menus, resizable windows, universal Macintosh key combinations and mouse-driven menus. Packet/3270 Mac uses a proprietary protocol to extend SNA communications for the Macintosh computer into the asynchronous world. The protocol provides all the functionality of SNA/SDLC, including full duplex, error-free, bit compressed transmission; simultaneous mainframe display and printer sessions; and DFT (IND$FILE) file transfer to CICS, TSO and CMS. The result is a powerful, responsive and inexpensive connection for remote Macintosh users.
$145 to $295 retail; workstation
$15,400 retail; host component
Telepartner International; 135 South Rd.; Farmington, CT 06432; 203-674-2640, 800-935-3270 or 203-674-8234 (fax)

PrinterAxcess
Allows the use of AppleTalk printers as IBM midrange system printers
Macintosh Plus or larger; System 7.0 or later; LaserWriter or other AppleTalk-connected printer; NetAxcess, MacTwin, NetLynx/Mac or TokenAxcess; IBM AS/400 with TIC card (TokenAxcess only); Version 1 release 3 mod 0 of IBM OS/400.

PrinterAxcess allows the use of LaserWriters or other AppleTalk-connected printers as IBM midrange system printers. With PrinterAxcess, Macintosh users can receive their IBM printouts on their personal or departmental Apple printers. PrinterAxcess works with other Andrew MacMidrange products to provide printing capability. It is a software printer session emulator that relies on the midrange connections established by either Andrew's NetAxcess, MacTwin, TokenAxcess or NetLynx/Mac. On the midrange host, a specific device must be configured as a printer. The corresponding device is then selected in the PrinterAxcess session selection window. After the printing session is started, all print jobs routed to that printer device by the midrange host will be processed by PrinterAxcess.

RCOM/Mac
Macintosh to PC or IBM mainframe communications
Macintosh Plus or larger.

RCOM/Mac provides Macintosh to PC or IBM mainframe communications and terminal emulation. It allows users to perform file transfers between IBM compatible systems and Macintoshes using several protocols, including AFTP, which incorporates data compression and error correction. Other protocols include X, Y, Z Modem, Kermit, IND$FILE and MacBinary. RCOM/Mac specializes in 3270 terminal emulation via a Hydra II protocol converter. Terminal types supported include Hydra, VT100, VT220, TTY, IBM 3101, FTTERM, TV950, ANSI, IBM 3162 and IBM 3164. In addition, it features user-definable keyboard layouts, screen colors, text capture and ANSI color. The program can be used with RCOM/MF on an IBM mainframe for Macintosh to mainframe file transfer capabilities. RCOM/Mac includes a powerful script language, unattended file transfer, sophisticated trace facility, user journal file and built-in script editor. Also with IND$FILE transfer capability for file transfer with any IBM mainframe.

Computer Vectors, Inc.; 74-5599 Luhia St., Ste. E7; Kailua-Kona, HI 96740; 808-329-6645 or 808-329-6523 (fax)

SimMac
Macintosh to IBM mainframe connectivity package
Macintosh Plus or larger; Hayes-compatible modem.

SimMac, Simware's Macintosh to mainframe software integration solution, provides Macintosh users with a customizable, easy-to-use Mac interface to host applications. It offers a powerful connectivity language, terminal emulation and advanced file transfer services. SimMac delivers all of these capabilities across multiple emulation methods, including async, X.25, coax, LAN gateways and protocol converters. SimMac's "Views" capability transforms 3270 screens into the familiar Mac interface, offering all the familiar Mac features, such as pop-up menus, dialog boxes and text-editing capabilities. Tedious and complex procedures can be automated with more than 300 commands in Simware's "Advantage" Connectivity Language. With "Views" and "Advantage," Mac users can access the power of host applications on their own terms, improving productivity and reducing time and costs. For remote Mac users, SimMac works with Simware's 3270 emulation software to provide cost-effective asynchronous access to mainframe applications.

TokenAxcess-Client
Software for sharing IBM 5250 sessions among an AppleTalk network through a Token Ring interface
Macintosh Plus or larger as clients; Macintosh II or Quadra as server; AppleTalk network; SNA•ps 1.0.1 or later; System 6.0.4 or later; Apple's Token Ring Card (gateway Mac only).

TokenAxcess-Client is software designed for sharing IBM 5250 sessions among an AppleTalk network through token ring. With TokenAxcess server software installed in a server Macintosh on the network, any model Macintosh residing on the network using TokenAxcess client software can access the AS/400 for terminal services and file transfer. TokenAxcess-Client uses LU6.2 services provided by Apple's SNA•ps gateway to connect with IBM's Display Station Pass Through (DSPT) on the AS/400. Once the connection is established, the server Macintosh appears to the AS/400 as another AS/400 with local IBM 5250 terminals attached. TokenAxcess-Client has the ability to utilize a user's existing network, including LocalTalk, PhoneNET, EtherTalk and TokenTalk. With Andrew's ETU (Emulator Transfer Utility) host-based file transfer software installed, data can be transferred between the AS/400 and Macintoshes, enabling IBM data to be manipulated in most popular Macintosh spreadsheet, database and word processing programs. Using TokenAxcess-Client enables Macintoshes to coexist with other devices on the token ring.
$200 to $5,695 retail; depending on configuration
Andrew Corp.; 4301 Westbank Dr., Ste. A-100; Austin, TX 78746; 512-314-3000, 800-531-5167 or 512-314-3195 (fax)

Desktop Communications/ Macintosh To MS-DOS

AccessPC 3.0
Utility that makes MS-DOS disks compatible with Macintosh
Macintosh Plus or larger; hard disk drive; SuperDrive; System 7.0 or later.

AccessPC is a simple, fast utility that lets users open MS-DOS files on a Macintosh, as well as flawlessly mount any DOS-formatted external drive. It is a control panel document that instantly recognizes and mounts any DOS-formatted floppy disk that is inserted into a Macintosh SuperDrive or external DOS-formatted drive. Also included is support for DOS-formatted removable cartridge drives and Multi-Driver, which enables users to mount any kind of external drive. Media Formatter is also included and allows users to speed hard disk access by at least 30 percent in most drives by means of intelligent disk caching. AccessPC is compatible with both System 6 and 7.
$129.95 retail
Insignia Solutions Inc.; 1300 Charleston Rd.; Mountain View, CA 94043; 415-694-7600, 800-848-7677 or 415-694-3705 (fax)

DBinterface Rapid
High-speed data conversion tool for 4th Dimension
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; 4th Dimension 2.0.11 or later; System 6.0.3 or later.

DBinterface Rapid is a 4th Dimension module that converts data to and from the dBase data format. It is designed for 4th Dimension users who need fast access to dBase, FoxBase and Clipper data, plus thousands of compatible applications. Features include: works from within any 4th Dimension database; supports all dBase III Plus-compatible field types; eliminates the need to own a dBase-compatible database system; and reduces data conversion to three simple steps (select 4th Dimension and dBase files; choose fields to copy; and press Import or Export button).

DOS Mounter Plus
Macintosh desktop utility for MS-DOS disks
Macintosh SE/30 or II family (or SE with SuperDrive).

DOS Mounter Plus is the latest version of Dayna's popular utility that mounts MS-DOS files on the desktop, just as if they were Macintosh files. Whether a Macintosh has a SuperDrive, an external Apple 5.25-inch drive, removable media drive or magneto-optical drive, DOS Mounter Plus is an ideal solution for accessing MS-DOS media. And in networked settings, DOS Mounter Plus now gives users easy file access to volumes on NetWare servers. No Macintosh support software is required on the server. All AppleShare services, such as printing and file sharing, remain available while users are logged into the NetWare server. DOS Mounter Plus includes MultiMounter, which mounts MS-DOS removable media cartridges and magneto-optical disks reliably on the Macintosh desktop, as well as MultiFormatter, which formats, partitions and tests removable media. Version 4.1 includes Netware SFT III Support, and support for WordPerfect Office 4.0.
$79 retail

FormatterFive
Partitioning and file transfer utility
Macintosh Plus or larger; 1 MB of RAM; System 6.0.5 or later.

FormatterFive allows Macintosh and PC users to share data quickly and easily. Features include: create Macintosh and DOS partitions on the same removable cartridge or disk drive; transfer large Macintosh files to DOS partitions and back; read DOS-formatted cartridges from most PC systems on a Macintosh; test and maintain a drive's media, lock partitions and more; and mount large DOS volumes on the Macintosh desktop.
$195 retail; includes Dayna's DOS Mounter 3.0
Software Architects, Inc.; 19102 N. Creek Pkwy., Ste. 101; Bothell, WA 98011; 206-487-0122 or 206-487-0467 (fax)

GraphPorter
Translates Macintosh text and graphics into a format accepted by many non-Macintosh applications and systems
Macintosh 512KE or larger.

GraphPorter is a communications utility that translates Macintosh text and graphics into a format that can be accepted by many non-Macintosh applications and systems. Packaged as a Chooser-level printer driver, it creates a Computer Graphics Metafile (CGM) when a user prints. The CGM may be in one of four selectable formats — MAP/TOP, DoD CALS, Graphics Arts or portable. Each of these formats, or profiles, meets the needs of a different constituency. GraphPorter is fully integrated system software, operating completely from the application during printing, and includes an integrated file transfer capability. Typical applications include transfer of Macintosh graphics to IBM PC-based presentation and graphic arts applications.

GSC Associates, Inc.; 13254 Jefferson Ave.; Hawthorne, CA 90250; 310-675-2093 or 310-675-2159 (fax)

Laptop Liberator
Connects PowerBooks to desktop PCs
Macintosh PowerBook.

Laptop Liberator is a connectivity product that gives Macintosh PowerBook users the ability to transfer files directly to and from desktop Macintosh, PC and IBM PS/2 computers running DOS. Users just connect the Apple SCSI Disk Adapter cable to a desktop Macintosh or PC and move the files using regular Macintosh and DOS commands. Features include: move files quickly and easily by creating both Macintosh and DOS partitions on the PowerBook's internal hard drive; mount DOS partitions and files on the PowerBook using Dayna's DOS Mounter; connection is quick and easy using the Apple SCSI Disk Adapter cable; once the PowerBook's drive is prepared, Laptop Liberator becomes invisible to a user; files up to the size of the PowerBook's drive are quickly uploaded or downloaded using standard Macintosh and DOS commands; files can be used in either the Macintosh or DOS environment and accessed from either computer; and after connecting the PowerBook to the SCSI port on a PC, the PowerBook is placed in SCSI Disk Mode, allowing each DOS volume on its internal drive to be read and controlled by the PC.
$195 retail; includes Dayna's DOS Mounter 3.0
Software Architects, Inc.; 19102 N. Creek Pkwy., Ste. 101; Bothell, WA 98011; 206-487-0122 or 206-487-0467 (fax)

Macintosh PC Exchange
Allows users to easily move files between a Macintosh and any PC-compatible computer
Macintosh with 3 MB of RAM; hard disk drive; Apple SuperDrive floppy disk drive; System 7.0 or later.

Macintosh PC Exchange enables Macintosh computers running System 7 and equipped with an Apple SuperDrive floppy disk drive to easily read, write and format PC-compatible disks. Files on the PC-compatible disk appear on the Macintosh screen as standard Macintosh documents, and can be opened, saved, renamed, moved, copied or deleted just as with any Macintosh document. These files can also be imported into Macintosh-based applications. In addition, the DOS-formatted disk can be used to transfer Macintosh files to a DOS computer. Macintosh PC Exchange can also be customized so that a Macintosh-based application is automatically launched when a user double-clicks on a file created by the DOS or Windows version of that application running on a PC-compatible computer. Macintosh PC Exchange is compatible with all Macintosh applications and many leading DOS and Windows applications.

Maclan Connect Gold
Provides transparent file, E-mail and printer sharing between Macintoshes and PCs
Any Macintosh; AppleShare workstation; IBM PC/AT/386/486; 640K; DOS 3.3 or later; AppleTalk network adapter; PC LAN network.

Maclan Connect Gold provides transparent file, E-mail and printer sharing between Macintosh computers and PCs. The software product runs on a networked PC that acts as an AppleShare server. Maclan Connect Gold supports unlimited Macintosh users and is fully AFP 2.1 compliant. Macintosh users do not need to learn another complicated interface or add any additional software to access PC resources. All PC files and printers are accessed using the standard Macintosh "AppleShare" Chooser interface. Maclan Connect Gold acts as a print spooler for Macintoshes. Any number of LaserWriters, or any of the PostScript printers attached to the server, can be associated with Maclan queues. Macintosh users can print a job and return to their application immediately while Maclan Connect Gold prints the job. Maclan Connect Gold allows Macintosh computers and PCs to share E-mail with any cross-platform E-mail package. Maclan Connect Gold is compatible with virtually all PC LAN operating systems.

■ **MacLinkPlus 8.0**
File transfer and translation between a Mac and PC
Macintosh Plus or larger; System 6.0.3 or later (System 7.0 or later required for MacLinkPlus/Easy Open Translators).

MacLinkPlus helps users avoid having to retype documents when sharing them between Macs and PCs. MacLinkPlus includes thousands of high-quality translation paths for converting files between Mac and PC word processors, databases, spreadsheets and graphics applications, while retaining all original formatting. MacLinkPlus bundles Macintosh Easy Open for easy "double-click" or "drag and drop" translations. Three versions are available, depending on the way users exchange files between a Mac and PC: MacLinkPlus/Easy Open Translators, for users that can already access PC files via network or DOS disk mounting utility, such as Macintosh PC Exchange; MacLinkPlus/Translators Pro, includes the features of Easy Open Translators plus Macintosh PC Exchange for using DOS disks in a Macintosh; and MacLinkPlus/PC Connect, has all the features of Translators Pro plus an 8-foot serial cable and communications software to share files between a Mac and PC via cable or modem.

RunPC/Network And RunPC/Remote 3.1.2
Complete PC compatibility
Macintosh Plus or larger; System 6.0 or later; IBM PC compatible running MS-DOS 2.0 or later.

RunPC allows Macintosh users to control an IBM PC compatible from their Macintosh via an AppleTalk network, modem or serial cable. DOS programs run on the PC, but are viewed in a window on the Macintosh. Users can control programs at full speed, even access PC peripherals, extended/expanded memory and VGA graphics. RunPC offers copy and paste of text and graphics between Mac and MS-DOS applications, printing DOS files on Macintosh printers, file transfer and a feature-rich connectivity program. RunPC/Network lets users connect to a PC via an AppleTalk network or modem. RunPC/Remote lets one Mac connect to a PC via the included serial cable or modem. Both versions include Argosy Software's Bridge/Mac software to translate documents between any combination of more than 40 Macintosh and PC word processors. They also include MountPC to mount DOS disks.

SoftPC 3.1 Professional
Run DOS and NetWare applications with VGA graphics on high-performance Macintosh computers
Macintosh with 68020, 68030 or 68040 processor; 8 MB of RAM; SuperDrive; System 6.0 or later.

SoftPC lets users run more than 50,000 standard or custom DOS applications on the Macintosh. SoftPC Professional runs PC programs that utilize VGA graphics and extended memory. It has MS-DOS 5.0 pre-installed and is ready to run on the Macintosh. In addition to support for NetWare networks, SoftPC provides for access to LAN Manager, Windows for Workgroups and Unix file servers. SoftPC provides integration with all Macintosh peripherals. Users can use their Macintosh printer, SuperDrive, keyboard, even an Apple CD-ROM with PC applications.

Software Bridge/Mac 2.2.0
Translates between Macintosh and DOS word processing formats
Macintosh Plus or larger; System 6.0 or later.

Software Bridge/Mac easily and accurately translates between any combination of more than 40 major Macintosh and DOS word processing formats for more than 800 translation options. Its innovative Click & Launch feature lets Macintosh users edit DOS documents with just a double click. Users simply double-click on a DOS document, and Software Bridge/Mac invisibly identifies the file, translates it and launches it into a Macintosh word processor, ready to edit. It can also translate from Macintosh to DOS, between Macintosh formats or even DOS to DOS. Software Bridge/Mac includes MountPC to access DOS disks from the Macintosh's SuperDrive like regular Macintosh disks.

Desktop Communications/ Macintosh To NCR

MacQT
Macintosh terminal emulation and file transfer
Any Macintosh (Macintosh Plus or larger recommended); Finder 6.0 or later.

MacQT (Macintosh Quick Terminal) provides emulation of an ADDS Viewpoint (a.k.a., NCR 7901) or an NCR 7900 connected to a host running Unix or NCR's ITX, IMOS or RMCOS operating systems. It allows a user to run any program on the host system, just as though they were working on a dumb terminal. Emulation is fast and thorough. MacQT will transfer, in either direction, sequential ASCII files or spool (print out) files. Host software is provided where necessary for file transfer.
$200 per Macintosh retail; site licensing available
Rasmussen Software, Inc.; 10260 SW Nimbus Ave., Ste. M2A; Portland, OR 97223; 503-624-0360 or 503-624-0760 (fax)

Desktop Communications/ Macintosh To Pick

MacToPic
Macintosh to Pick
Macintosh with 1 MB of RAM recommended; double-sided disk drive; modem or direct connection to host computer.

MacToPic is a terminal emulation and data transfer program that allows a Macintosh to be used as a terminal (connected to a host computer directly or via modem) emulating ViewPoint, Wyse 50, VT101 or Prism. The emulators support video attributes, such as dim, reverse, underline, 132-column codes and graphic characters sent from the host computer, as well as "enhanced" ViewPoint mode. Data transferred from the host computer can be used in Mac spreadsheets, databases, word processors, page layout and other programs. Other features include phone list and dialer for Hayes-compatible modems; on screen programmable function keys; Mac-to-host, as well as host-to-Mac data transfer capability; 32-bit clean; Apple Events support; and more. The data transfer capabilities are designed to work with relational databases on hosts running Pick, Unix Prime, Ultimate, uniVerse, etc. MacToPic has been extensively tested with the following host computers: IBM RT, IBM RS6000, IBM 386/486, Compaq 286/386, Ultimate, McDonnell Douglas, Altos, ADDS Mentor, C.Itoh, Wyse 386, Everex, GA, DEC, Prime, Encore, Sanyo/Icon, Sequoia, Fujitsu, HP, ADP, Data General and Stratus.

MacToPic Plus
Macintosh to Pick
Macintosh with 2 MB of RAM recommended; double-sided disk drive; modem or direct connection to host computer.

MacToPic Plus has all of the data transfer and emulation features of the regular version of MacToPic, plus the following: CommToolBox support — connection and file transfer tools can be used with MacToPic Plus to connect into a wide variety of networks with numerous file transfer protocols. Systems using Ethernet, AppleTalk, TCP/IP, Token Ring and others — as well as file transfer tools, such as Xmodem, Ymodem, Zmodem, Kermit and FTP — are all supported by the Plus version. Users simply select from a scrolling list of network or file transfer tools, several of which are provided with the Plus program (many others are available from a multitude of sources). Data transfers can be remotely controlled from Pick Basic, and host menu items can be selected with a simple click of the mouse on screen (no special host programming required). MacToPic Plus offers page forward/back features, as well as the ability to display 24-bit color pictures and QuickTime movies.
$295 retail; site licenses available

Max
File transfers between Macintosh and Tandem
Macintosh Plus or larger; Tandem computer.

Max is a Tandem-resident file transfer product that supports both Xmodem and MacBinary protocol transfers to any environment that provides the communications and file transfer support for either of these two protocols. Max supports both interactive and application invoked file transfer. It provides a technique for reformatting Tandem data records and data fields in conjunction with the transfer, facilitating direct transfer into foreign applications, such as spreadsheets and local databases. Max supports both text and graphic transfers, and provides for transferring foreign text files into a Tandem edit file format and vice versa. Max maintains a foreign file directory, allowing users to find these files on the Tandem database by Tandem name or by the file's native (foreign) name. Max provides unattended multifile transfer, Macintosh store and forward capabilities and an extension of the standard Macintosh dialogs for file selection and processing.

Desktop Communications/ Macintosh To Unix

5PM Term
Multisession communication application
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later.

5PM Term is a powerful multisession communication application with full support for Apple's Communications Toolbox (i.e., connection, file transfer and terminal tools). 5PM Term enhances basic terminal emulation by offering a macro-command scripting environment to automate log-on procedures, attach macros to keyboard keys and define hotspots. In addition, 5PM Term acts as a runtime for any development realized with 5PM Pro, ASC's GUI development environment for front ending and client/server development. This makes 5PM Term one of the most versatile and evolutive terminal emulation products available for the Macintosh.

5PM Term + integrates in one single package emulation for: IBM mainframes implementing IBM-3270 over TCP/IP and SNA; IBM midrange AS/400 implementing IBM-5250 over TCP/IP and Token Ring; and Unix and DEC by implementing DEC-VT420 over TCP/IP, serial and LAT. In addition, 5PM Term + is shipped with IND$FILE, FTP client and Xmodem file transfer protocols.

5PM Term for AS/400 integrates in one single package emulation for IBM midrange AS/400 implementing IBM-5250 and 5250TN over TCP/IP and Token Ring, as well as FTP client and Xmodem file transfer protocols.

5PM Term for IBM Mainframe integrates in one single package emulation for IBM mainframes implementing IBM-3270 and 3270TN over TCP/IP and SNA, including Novell's NetWare for SAA gateway, as well as IND$FILE, FTP client and Xmodem file transfer protocols.

5PM Term for Unix/DEC integrates in one single package emulation for Unix and DEC hosts implementing DEC-VT420 over TCP/IP, serial and LAT, including Novell's NetWare for LAT gateway, as well as FTP client and Xmodem file transfer protocols.
$375 retail; 5PM Term +
$285 retail; 5PM Term for AS/400
$285 retail; 5PM Term for IBM Mainframe
$259 retail; 5PM Term for Unix/DEC

A/UX 2.0 Tape Driver
Software drivers for Apple's A/UX operating system
Macintosh Plus or larger; tape drive; A/UX 2.0.

The A/UX 2.0 Tape Driver allows tape backup systems to be directly addressed by the A/UX 2.0 operating system. By allowing interchange of industry standard format tapes, the Macintosh can easily share data with other Unix-based workstations. These device drivers fully support advanced SCSI features, such as multithreaded disconnect/reconnect, where up to six tape drives or other SCSI devices can be accessed simultaneously. The drivers also fully support DMA on a Macintosh IIfx; DMA can only be utilized in preemptive multitasking environments, such as A/UX 2.0. This software includes special utilities to help optimize data transfer rates, tape capacity and backup performance.
$399 retail
$199 retail; when purchased with FWB tape drive
FWB, Inc.; 2040 Polk St., Ste. 215; San Francisco, CA 94109; 415-474-8055 or 415-775-2125 (fax)

CI-Sunset
Connects up to 32 Macintosh computers on an A/UX computer using AppleTalk
Macintosh SE/30 or II family; A/UX 3.0 or later.

CI-Sunset implements the AppleTalk logon capabilities via ADSP. With CI-Sunset, users can simultaneously connect up to 32 Macintosh computers on an A/UX computer via LocalTalk. Other benefits include: provide terminal emulation beyond VT100 on A/UX; MacWorkStation on the A/UX platform; and more (client/server). CI-Sunset is composed of two daemons launched during the start of A/UX in multiuser mode. The package includes one A/UX disk and documentation.
$500 U.S. retail
About Software Corp.; 10601 S. De Anza Blvd., Ste. 211; Cupertino, CA 95014; 408-864-7954 or 408-864-0694 (fax)

DAL Server For Unix
Data Access Language server
Software for Sun SPARCstation, IBM RISC System/6000, HP-9000 and DEC Alpha AXP environments.

Pacer's Data Access Language (DAL) Server for Unix is a powerful tool that provides transparent access from Macintosh and Windows applications to data resident in popular database management systems. DAL is an SQL-based, high-level connectivity

language that implements, in multivendor environments, a broad range of desktop-to-DBMS connectivity tasks. The DAL Server offers access to Ingres, Informix, Oracle and Sybase Unix database management systems from Windows and Macintosh computers running DAL-aware client applications. The ODBC/DAL Server interprets requests for the specific databases, assembles the data and transports the results back across the network to the client application. It eliminates the need for separate query, terminal emulation and file transfer software packages.
$4,000 and up retail
Pacer Software, Inc.; 1900 West Park Dr., Ste. 280; Westborough, MA 01581; 508-898-3300, 800-722-3702 or 508-366-1356 (fax)

GetThePicture
Image database management system
Macintosh Plus or larger.

This powerful integrated software package provides a unique solution for OPI (Open Pre-Press Interface) and image database management. It includes tools designed for managing the storage, retrieval and printing of high- and low-resolution color images. Utilizing a Unix file server, the image database can be quickly searched to locate desired graphics for placement into composite documents like QuarkXPress or PageMaker. Users manipulate only low-resolution versions of images in their documents, resulting in dramatic improvements in production times. At print time the high-resolution image is automatically substituted using IPT's OPI. With GetThePicture, graphic artists and page layout designers can easily and quickly access graphics. GetThePicture includes IPT's uShare, an Image Browser, a print spooler (allows bidirectional printing) and PrintQMgr (allows users to view and monitor print queues from their Macintosh, as well as suspend, delete and move jobs from one print queue to another).
Call for pricing
Information Presentation Technologies, Inc.; 555 Chorro St., Ste. A; San Luis Obispo, CA 93405; 805-541-3000 or 805-541-3037 (fax)

InterPrint
Macintosh to Unix printing
Macintosh Plus or larger; 2 MB of RAM; MacTCP (included); LocalTalk gateway or Ethernet board; System 6.0.5 or later.

InterPrint, the industry's only commercial implementation of an LPR client for the Macintosh, gives Mac users the ability to print to any LPR-based PostScript Unix printer on a TCP/IP network. InterPrint operates through the Chooser, making it as simple to select a Unix printer as it is to specify an Apple LaserWriter. Now Macintosh uses can access a Unix printer on their own local network or across the country using TCP/IP. And new to InterPrint in 1994 is an LPR server for the Mac, allowing Unix, PC and Mac users to print to any specified Chooser printer as an LPR printer.
$195 retail; bundles and discounts available (call for a free 30-day demo copy)
InterCon Systems Corp.; 950 Herndon Pkwy., Ste. 420; Herndon, VA 22070; 703-709-5500, 800-468-7266 or 703-709-5555 (fax)

K-AShare
AppleShare file server software for Unix hosts
Sun, Hewlett Packard or Silicon Graphics computers.

K-AShare allows Unix hosts to act as AFP file servers. Files, folders and volumes stored on remote servers appear as icons to Macintosh users, similar in representation and function to local files, folders and volumes. Both Macintosh and Unix users are provided secure, convenient, transparent access to shared files. System administrators can use Unix backup facilities to archived shared Macintosh files from the Unix host. K-AShare also provides Macintosh users with access to volumes on other Unix machines connected to the server via NFS. A Unix host running K-AShare can still perform all its usual functions. The need for dedicated Macintosh AppleShare servers is eliminated. No additional software is needed on each served Macintosh beyond that supplied with MacOS. A variety of physical network connections between Macintoshes and Unix servers are supported, including all Ethernet systems, as well as combinations of LocalTalk and Ethernet connected through bridges or gateways.
$595 to $5,495 retail; price is based on number of concurrent sessions
Xinet; 2560 9th St., Ste. 312; Berkeley, CA 94710; 510-845-0555 or 510-644-2680 (fax)

K-FS
Extends the RISC processing power of Unix workstations to Macintosh files
Sun, Hewlett Packard or Silicon Graphics computers.

K-FS, an add-on option to Xinet's K-AShare, gives Unix users access to files stored on networked Macintoshes without requiring any additional software to be installed on the Macintoshes. K-AShare and K-FS work in compliment: K-AShare bringing Unix-resident files to Macintosh computers, K-FS bringing Macintosh files to Unix systems. With K-FS, Macintosh folders and files can be viewed and manipulated on the Unix workstation as if they were on the workstation's own disk. Unix users use the processing power of their workstations on Macintosh files and remain in their familiar Unix environment. K-FS also provides a convenient mechanism for backing up entire Macintosh disks automatically from a Unix system. K-FS is a client application that, like K-AShare, is built on Xinet's implementation of the AppleTalk network communications protocols. These protocols run on LocalTalk, Ethernet and FDDI networks.
$295 retail; with any K-AShare license
Xinet; 2560 9th St., Ste. 312; Berkeley, CA 94710; 510-845-0555 or 510-644-2680 (fax)

K-Spool
Network printing software for sharing PostScript printers with Unix hosts
Sun, Hewlett Packard or Silicon Graphics computers.

K-Spool software allows users of Macintosh computers and Unix systems to share PostScript printers. It is a Unix application that functions as a print server for the Macintosh, as well as a gateway to LocalTalk-connected printers for the Unix user. K-Spool may direct its print queues to PostScript printers connected serially, via Ethernet, or on LocalTalk. For Macintosh users, K-Spool is a quick and easy spooler that frees up the Mac immediately for further use. No additional software is needed on each served Macintosh beyond that supplied with MacOS. For the Unix user, K-Spool allows PostScript printers to print ASCII text and ditroff output, as well as PostScript. A variety of physical network connections between Macintoshes and Unix servers are supported, including all Ethernet systems, as well as combinations of LocalTalk and Ethernet connected through bridges or gateways.
$895 retail
Xinet; 2560 9th St., Ste. 312; Berkeley, CA 94710; 510-845-0555 or 510-644-2680 (fax)

NetPrint Sun
Cross-platform printing services for Sun, Macintosh and PC users
SPARC, Sun-4 and Sun-3 families; SunOS 4.x or later; Macintosh Plus or larger and IBM and compatible PCs with AppleTalk printing software; LocalTalk or Ethernet network cabling.

NetPrint Sun provides powerful print services to Sun, Macintosh or PC users. It gives Macintosh and PC users access to the power of NeWSprint and SPARC, including the 12-page-per-minute SPARCprinter. Sun workstations may access PostScript printers, such as LaserJets and LaserWriters. With NetPrint Sun, users can easily and inexpensively share cross-platform printing resources.
$495 retail
Sitka Corp.; 950 Marina Village Pkwy.; Alameda, CA 94501; 510-769-9669, 800-445-8677 or 510-769-8771 (fax)

PacerPrint
Print service for PostScript devices in VMS and Unix environments
Any Unix-compatible system.

PacerPrint is a software product that enables a PostScript-compatible printer (such as an Apple LaserWriter) to be directly connected to a Unix or VMS host or positioned in a Unix or VMS network. File translation from Tektronix 4010/4014 and Diablo 630 for VMS or text format to PostScript for VMS and Unix is provided. With PacerPrint, a common print queue can be used for Macintosh and Unix print jobs.
Included with PacerShare in the Unix environment only; otherwise available separately
Pacer Software, Inc.; 1900 West Park Dr., Ste. 280; Westborough, MA 01581; 508-898-3300, 800-722-3702 or 508-366-1356 (fax)

PacerShare
Unix or VMS AppleShare-compatible file server
Any Unix-compatible system.

PacerShare enables a Unix or VMS host system to transparently act as a large file server for a Macintosh network, providing the same functionality as a dedicated Macintosh running an AppleShare server. The host file system is viewed from the Macintosh as a series of volumes with Unix and VMS directories being represented as folders and files as files. A host text file could, for example, be transparently accessed by both a Macintosh and a host editor. The Macintosh mouse can be used to directly peruse the host file system, create directories, move directory trees or access any host file type from within a standard Macintosh application. The physical connection between the Macintosh and the host system is accomplished via Ethernet using one of several supported hardware and bridge configurations. Licensing is based on the number of simultaneous client connections to the host server software.
$5,000 per host computer and up retail; includes PacerPrint on Unix (PacerPrint sold separately on VMS)
Pacer Software, Inc.; 1900 West Park Dr., Ste. 280; Westborough, MA 01581; 508-898-3300, 800-722-3702 or 508-366-1356 (fax)

Desktop Communications/ Macintosh To Wang

Lightspeed NVS For The Macintosh
Mac to Wang VS
Macintosh Plus or larger; 386-class PC for a gateway.

Lightspeed Mac allows Macintoshes to connect to Wang's VS line of minicomputers. The Lightspeed "connection" actually allows for the shared use of each system's resources, such as printers, files, documents, disk drives, etc. Using the Wang Local Office Connection (WLOC/928) board in a PC, the connection is more than 100 times faster than the asynchronous connection that other connectivity products use. A 386-class PC is required to act as a gateway from AppleTalk to the VS. This is necessary only because Macs cannot accept WLOC cards. With this gateway in place, virtual terminal emulation, file copy, document conversion and message transmissions are all sustained. Print services include VS print redirection to LaserWriters and Mac print redirection to LCS 15 printers. LCS 15 printers are the only Wang VS compatible printers that support PostScript.
$1,300 to $9,750 retail
Lightspeed Software; 1800 19th St.; Bakersfield, CA 93301; 805-324-4291 or 805-324-1437 (fax)

Mac2200 1.11
Wang 2200 terminal emulator
Macintosh 512KE or larger; Wang 2200.

Mac2200 is a Wang 2200 terminal emulator. It provides full support of the 32 special function keys and the complete set of programmer support keys of the Wang terminal as both on-screen buttons and keyboard selections. Version 1.11R, with customized key caps for users of Redshaw Software, is now available. Customization for other software packages is available. The bright, blink, reverse video and underline attributes, box graphics and alternate character sets are emulated. Local printer support, including remote screen dumps, is provided for the ImageWriter I, II or LQ. The Macintosh integration includes cutting and pasting between Mac2200 and other applications via the Clipboard, support of desk accessories and the capability to capture printed text in a Macintosh file. In addition, the emulator allows a Wang Basic-2 programmer to access the Macintosh mouse through special control sequences. All of the features of Mac2200 are user-configurable and can be stored in a document that is automatically loaded by the program. Customizable settings include: row/column coordinate display; Hayes-compatible modem support, including automatic phone dialing; screen color; cursor shape; cursor blink rate; audio alarm volume; and baud rate (300 to 19,200 bps).

These Products Available Through Bottom Line Distribution
1-800-347-1923

$300 retail; program, manual and adapter cable
The Vermont Software Co., Inc.; PO Box 731; Wells River, VT 05081; 802-757-8000 or 802-757-3234 (fax)

VsCom/Macintosh
Wang VS 2110A terminal emulation and document file transfer
Macintosh 512K or larger; available modem or printer port.

VsCom/Macintosh provides Wang VS 2110A terminal emulation. Wang VS function keys are accessible through continuously displayed icons, the Macintosh Extended Keyboard or regular keyboard aliases. VsCom/Macintosh conforms to the Macintosh user interface guidelines, including copy and paste, pull-down menus, MultiFinder and DA compatibility. Simultaneous two-way transfer and conversion of word processing documents and data files between the Mac and Wang VS is easily accomplished. Wang documents supported include standard WP and WP Plus. Macintosh document conversions include MacWrite, Microsoft Word, WordPerfect and DCA Revisable Format Text. Connection can be made locally or remotely from stand-alone Macintoshes or AppleTalk networks to Wang VS ADC, EADC, MLTC and WACS communications ports. Powerful script command files can completely automate the Wang VS terminal access. Wang files can be printed locally on an ImageWriter or LaserWriter. VsCom/Macintosh also provides direct transfer of Macintosh documents and files in and out of Wang Office Mail Boxes.
$395 retail; terminal emulation and file transfer
$195 retail; terminal emulation only
M/H Group; 300 W. Adams St.; Chicago, IL 60606; 312-443-1222

Desktop Communications/ Network Management

AsantéView And AsantéView Lite
SNMP-based network management software for the AsantéHub intelligent Ethernet hubs and bridges
Any Macintosh.

AsantéView is a powerful and easy-to-use software application designed to monitor and control networks via the AsantéHub 2072, 1012 and NetStacker Hubs. It is the first network management software that delivers a graphical interface for local (in-band) and remote (out-of-band) management from both Windows PC and Macintosh platforms. It also supports the Novell NetWare Management System (NMS) platform. With AsantéView, network managers can optimize network performance, investigate traffic bottlenecks and identify network problems before they become critical.
$1,299 retail; AsantéView for Macintosh or Windows, in-band and out-of-band
$399 retail; AsantéView Lite for Macintosh or Windows (cannot be used with 2072)
Asanté Technologies, Inc.; 821 Fox Ln.; San Jose, CA 95131; 408-435-8388, 800-662-9686 or 408-432-7511 (fax)

Bridge Series 3.0
Allow LocalTalk devices to be bridged to extended network protocols
Macintosh Plus or larger; 2 MB of RAM; Ethernet; System 6.0.7 or later.

The Bridge Series consists of five software packages that allow LocalTalk devices to be bridged to extended network protocols, such as Ethernet, Token Ring, FDDI and ISDN. The Bridge Series does not affect the host Macintosh's performance and can even selectively hide or password protect the bridged devices from the rest of the network. Devices most commonly bridged with the Bridge Series include LocalTalk printers and slotless Macs, like PowerBooks, which require access to file and mail services that reside on Ethernet or Token Ring. LaserBridge will connect 10 LocalTalk printers to a host Macintosh network that uses extended protocols. PowerBridge allows users to connect one LocalTalk device to a host Macintosh via the LocalTalk port and to then access network services as if the device was directly connected to the extended network. SuperBridge will connect 10 LocalTalk devices of any kind to a host Macintosh network that uses extended protocols. TCP/IP versions of PowerBridge and SuperBridge are available to allow access to Ethernet-based TCP/IP services, such as NFS, Telnet and FTP from the LocalTalk-based Macs.
$149 retail; PowerBridge
$199 retail; LaserBridge
$249 retail; SuperBridge
$249 retail; PowerBridge/TCP
$349 retail; SuperBridge/TCP
Sonic Systems, Inc.; 1150 Kifer Rd., #201; Sunnyvale, CA 94086; 408-736-1900, 800-535-0725 or 408-736-7228 (fax)

Dayna Network Management System
Network management tools
Macintosh Plus or larger; 2 MB of RAM (4 MB recommended); color monitor recommended.

Dayna's Network Management System consists of Network Vital Signs, a fault monitoring software package, and NetScope Console and NetScope Probe, a software and hardware combination for monitoring traffic on local and remote segments of AppleTalk internetworks. Network Vital Signs is a modular fault monitoring program that runs in the background on any Macintosh computer and monitors the entire network for changes in the status of key AppleTalk network devices, such as file servers, routers, printers and network modems. Network Vital Signs is now shipping Version 1.1 with additional router monitoring and ease of use features. NetScope is a traffic monitoring system consisting of software (NetScope Console) and hardware (NetScope Probe) agents that gather detailed traffic statistics from any segment of an AppleTalk internet. NetScope Probe is a small hardware device that can be connected to either a LocalTalk or Ethernet segment of the network to gather information, such as bandwidth usage and error rates. NetScope Console management software runs on any Macintosh on the network and retrieves information from each Probe.
$1,199 retail; Dayna Network Management System
$399 retail; Network Vital Signs only
$749 retail; NetScope Console and Probe only
$419 retail; additional Probe
Dayna Communications; Sorenson Research Park; 849 W. Levoy Dr.; Salt Lake City, UT 84123; 801-269-7200 or 801-269-7363 (fax)

EtherPeek
Ethernet network analyzer software
Macintosh LC or larger; color monitor recommended; System 6.0.5 or later.

EtherPeek is an Ethernet network analysis package that makes the complex tasks of network monitoring and debugging easy, graphic and customizable. It uses graphs, color and customizable sounds to capitalize on the Macintosh interface and simplify network management. EtherPeek offers features that can localize problems, perform sophisticated diagnostic tests, monitor network loads and events, test hardware and software and provide information for the management and planning of network configurations. EtherPeek works like a phone tap, capturing all data packets on the network. Advanced features include filters that allow captures to be limited to specific addresses and protocols; triggers, a setting that allows user-specified events to start or stop a capture; and audible alarms that warn of threshold violations or new/unknown nodes and protocols. EtherPeek's protocol decoders allow net managers to inspect packet contents, including protocol layers and data. EtherPeek comes configured to decode IP, NetBEUI, NetBIOS, SNMP, ARP/RARP, NetWare IPX (RIP, SAP, NCP), Banyan Vines, DECnet (Phase IV), DEC LAT and MOP, XNS, OSI, IPTalk, AURP and the entire AppleTalk stack. Finally, EtherPeek allows users to construct and send "test" packets onto the network.
$795 retail
The AG Group; 2540 Camino Diablo, Ste. 202; Walnut Creek, CA 94596; 510-937-7900 or 510-937-2479 (fax)

FileWave
Network management
Server and Administrator requires Macintosh with 68020 or larger processor or Power Macintosh; System 7.0 or later. User requires Macintosh Plus or larger or Power Macintosh; System 6.0.5 or later.

FileWave automates software distribution and administration and provides concurrent-use application information on networked and mobile Macintoshes. Users can schedule simultaneous, automatic software installations and upgrades over the network; and download the latest version of an application, mail upgrade, even System-level software immediately or at night. FileWave makes the centralized administration of an organization's templates and documents easy and efficient, bringing updated copies straight to a user's desktop. FileWave goes way beyond remote software installation where administration ends as soon as a file is distributed and which requires complex procedural scripting. FileWave creates a centrally-administered volume on each Macintosh where files continue to be tracked. Users can be assured of having the most up-to-date version of software, retaining hard disk performance of applications without affecting network traffic. All an administrator needs to do to upgrade an application for hundreds of users is a Finder drag and drop of a single icon.
$895 retail; Starter Pak with 20 users
$395 and $1,795 retail; 10 and 50 user Add-on Paks
Wave Research; 2261 Fifth St.; Berkeley, CA 94710; 510-704-3900 or 510-704-3950 (fax)

GraceLAN Asset Manager
Asset-tracking database
Macintosh II; 4 MB of RAM; System 6.0.5 or later.

GraceLAN Asset Manager is an asset-tracking database designed for the network manager who is also responsible for tracking microcomputer hardware and software inventory and maintenance schedules. It stores information that will let a manager track hardware and software details on each system, including serial numbers, locations, vendor information and purchase, warranty and service details. This information can be hand entered or automatically collected and imported from the GraceLAN Network Manager. For those who are not GraceLAN Network Manager registered users, Asset Manager comes with GraceLAN Personal Profiler, a single-workstation profiling utility. GraceLAN Personal Profiler collects system information to be imported into Asset Manager. This comprehensive assembly of critical data can be managed by 4th Dimension's robust searching, sorting and reporting functions to give managers complete pictures of their network environments.
$895 retail
TechWorks; 4030 Braker Ln. W, Ste. 350; Austin, TX 78759; 512-794-8533, 800-688-7466 or 512-794-8520 (fax)

GraceLAN Network Manager
Network management tool
Macintosh II; System 7.0 or later.

GraceLAN Network Manager lets managers troubleshoot their AppleTalk networks in real time without disturbing users and network services. Managers can collect comprehensive information on every Macintosh, PC and printer on an AppleTalk network in seconds, without leaving their desks. This information can be used to identify system and memory configurations, application versions, peripherals, networking tasks and system extensions. Managers can set up custom views of the network to collect selected bits of system information (i.e., just applications, just INITs, etc.). Data can be viewed in real time or stored for future reference. Change reports show administrators what is new or different on the network since the previous scan of a document. Network administrators also have the ability to initiate a virus scan and view the results of that scan for all machines on the network that have Virex 5.1 installed.
$795 retail; single user version
TechWorks; 4030 Braker Ln. W, Ste. 350; Austin, TX 78759; 512-794-8533, 800-688-7466 or 512-794-8520 (fax)

GraceLAN Server Manager
Lets network administrators monitor and control AppleShare file servers from a single remote location
Macintosh II or larger; 2.5 MB of RAM; AppleTalk Phase 2; AppleShare 3.0, 4.0 or Pro; System 7.0 or later.

The GraceLAN Server Manager lets network administrators monitor and control AppleShare file servers from any Mac on the network. Administrators can: add and edit user and group lists; set alarms for various server problems, including crashes, idle users and limited disk space; and monitor long-term server activity trends. Reports are available on server activity

and disk space usage. Several server actions can be scheduled, including the launching of any application, script or document on the server. In short, administrators can perform all of their server management functions without having to go to the server.
$395 retail; one server
$695 retail; five servers
$995 retail; 10 servers
TechWorks; 4030 Braker Ln. W, Ste. 350; Austin, TX 78759; 512-794-8533, 800-688-7466 or 512-794-8520 (fax)

GraceLAN Update Manager
Updates software across an AppleTalk network
Macintosh II; 2 MB of RAM; System 6.0.5 or later.

GraceLAN Update Manager is a flexible tool for updating software across an AppleTalk network. More than just a file transfer utility, Update Manager's intelligent file packages function as if the manager were actually installing them from the user's machine. The packages go only to those who have the right amount of disk space, memory or other characteristics to receive them; the files each know where to go on the recipient's workstation, and Update Manager knows who did what with each package sent. Update Manager uses the same GraceLAN Responder INIT as GraceLAN Network Manager. Managers do not have to install a separate INIT for each product.
$295 retail; single-zone version
$495 retail; multizone version
TechWorks; 4030 Braker Ln. W, Ste. 350; Austin, TX 78759; 512-794-8533, 800-688-7466 or 512-794-8520 (fax)

Help! Network
Configuration management and support tool
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0 or later.

Help! Network is a knowledge-based system management utility that allows network administrators to remotely support networked Macintoshes. The program is designed to help support personnel keep the Macintoshes they support running smoothly by remotely detecting conflicts, incompatibilities and other configuration problems. Help! Network creates easy-to-read diagnostic reports about supported Macintoshes. Reports outline any existing problems and tell exactly how to solve them. Help! Network detects conflicts, incompatibilities, improperly installed files, environmental problems, damaged files and duplicate files.

KeyServer
Transparent metering enforces site-wide software license compliance
Any Macintosh including Power Macintosh; any System software including A/UX and MAE.

KeyServer manages software license compliance throughout a network. An administrator can install license control into any Macintosh including Power Macintosh or Windows applications and then centrally enforce the most common licenses, including concurrent use, zone restricted and individual user licenses. KeyServer has no detectable impact on a user's environment and makes no assumptions about a user's hardware and software configuration. A keyed application behaves identically to its unkeyed counterpart and can run from a remote file server or a local hard disk. KeyServer is compatible with AppleShare, Novell, Pathworks, etc., but requires no file sever and no dedicated hardware. Network managers can remotely monitor current software usage, view transaction logs and send bulletins to KeyServer users. An audit tool is included that reports on users' software assets and conveniently brings each user's hard disk into license compliance. KeyServer gives users the convenience and performance of stand-alone applications while providing network administrators with central license management, usage reports and access security.
$70 to $35 per client retail; large site and educational discounts available
Sassafras Software; PO Box 150; Hanover, NH 03755; 603-643-3351 (phone/fax)

LANsurveyor
Map-based AppleTalk network management tool
Macintosh Plus or larger.

LANsurveyor is network management software for the Macintosh that logically maps AppleTalk networks. The LANsurveyor map is used as the interface to perform several critical management tasks. LANsurveyor graphically documents the network, provides real-time troubleshooting capability and uses SNMP (Simple Network Management Protocol) to profile and monitor network devices. The map is easily updated to show changes and customized to reflect individual network characteristics. LANsurveyor tests the network for responsiveness, alerts managers to problems and shows how problems relate to other parts of the map. Device profiling, reporting and traffic monitoring features provide data needed to configure the network for efficient performance and to determine resource requirements. All this information and functionality is available using LANsurveyor's graphical user interface. LANsurveyor is available in two sizes: a limited-zone version for small to medium-size networks and an unlimited version for large networks.
$395 retail; five-zone version
$695 retail; unlimited version
Neon Software, Inc.; 3685 Mt. Diablo Blvd.; Lafayette, CA 94549; 510-283-9771 or 510-283-6507 (fax)

LocalPeek
LocalTalk network analyzer software
Macintosh Plus or larger; System 6.0.5 or later.

LocalPeek is a LocalTalk network analysis package that makes the complex tasks of network monitoring and debugging easy, graphic and customizable. It uses graphs, color and customizable sounds to capitalize on the Macintosh interface and simplify network management. LocalPeek offers features that can localize problems, perform sophisticated diagnostic tests, monitor network loads and events, test hardware and software and provide information for the management and planning of network configurations. LocalPeek works like a phone tap, capturing all data packets on the network. Advanced features include filters that allow captures to be limited to specific addresses and protocols; triggers, a setting that allows user-specified events to start or stop a capture; and audible alarms that warn of threshold violations or new/unknown nodes and protocols. LocalPeek's protocol decoders allow net managers to inspect packet contents, including protocol layers and data. LocalPeek currently decodes SNMP, AURP, MacIP and the entire AppleTalk stack (ALAP, DDP, PAP, ASP, ADSP, ATP, RTMP and NBP). Finally, LocalPeek allows users to construct and send "test" packets onto the network.
$495 retail
The AG Group; 2540 Camino Diablo, Ste. 202; Walnut Creek, CA 94596; 510-937-7900 or 510-937-2479 (fax)

Lookout!
Provides an easy way to check basic security status of AppleShare servers
Macintosh Plus or larger; System 7; AppleShare Client software.

Lookout! is a control panel that gives network administrators an easy way to check basic security status of their AppleShare servers. For example, users often inadvertently turn on Guest access to their machines, opening themselves up to others' tampering. Lookout! helps pinpoint these users by showing three basic pieces of information: whether a file server is an AppleShare 2.0, 3.0 or System 7 Fileshare server; whether Guest access is enabled; and, if the Lookout! Macintosh is running Nok Nok, Lookout! can identify the owner of the remote AppleShare server. The information is displayed in the Chooser itself, modifying the AppleShare server names to include the status of those servers. Armed with this information, administrators can then take an appropriate course of action so they can maintain an open environment without compromising security.
$19.95 retail
Trik, Inc.; 400 W. Cummings Park, Ste. 2350; Woburn, MA 01801; 617-933-8810, 800-766-0356 or 617-933-8648 (fax)

MacPing
AppleTalk network troubleshooting tool
Macintosh 512KE or larger; System 4.1 or later.

Just as sonar or radar systems send a signal and wait for an echo, MacPing sends "probe packets" (usually AppleTalk Echo Request packets) into a network and waits for responses from the various devices on the network. The arrival of these response packets (or the lack of responses), along with the time the responses take to arrive, can help find troubles in the network. MacPing can test devices anywhere on a network. Users simply choose the desired zone from the Zone pop-up menu. If that zone contains multiple networks, users choose the desired network number from the Network menu. MacPing differs from other network testing programs in that it tests all the devices on a particular network in parallel. This allows users to compare the performance of different devices on the same wire to determine the cause of network problems.

MacToken
Token-Ring network frame-capturing diagnostic tool
Macintosh II; 2 MB of RAM; hard disk drive; Apple Token-Ring card or Avatar's LanWay 16/4 Mbps card.

MacToken is a diagnostic tool for troubleshooting Apple, IBM, Novell and all IEEE 802.5 token-ring networks. Unique features include: display a logical map of the token-ring network; track down problems such as broken connections; retrieve information on device names and addresses, network numbers, ring status and error counts; display the correlation between each station and its next active upstream neighbor (NAUN) on the ring; use HyperCard to maintain network forms online; print and export the ring map to disk; sort network information in ascending or descending sequence, alphabetically or in ring order; select any slot that has a token-ring card; display significant events in color (highlight problem situations in the ring status window, new ring events, etc.); display a dynamically changing graph of real-time network performance; and display and print the network event log. MacToken includes an AppleTalk Interpreter, which interprets all layers of the AppleTalk protocol.
$1,250 retail; software only
$1,995 retail; with Avatar's LanWay 16/4 adapter

MailMan
Receives alerts and messages from the TalkManage station
Macintosh II family; TalkManage.

MailMan receives alerts and messages from the TalkManage station to support fault alarm forwarding for unattended or after hours operations and proactive alerts or advisories to remote users even if the E-mail system is down. Features include: allows proactive network administrators to inform users of network status as it happens; establishes the TalkManage management station as the message source; forward alarm warnings to remote key network personnel from unattended TalkManage management station; network alerts can be sent by the network manager/administrator with or without TalkManage active and will not disrupt TalkManage operations; directed and/or broadcast messaging to any Macintosh user(s) across the internet; reliable, asynchronous messaging service without requiring a dedicated mail sever; and simple installation and use-automatically configured.

MultiGate Manager SNMP
SNMP network management software
Macintosh II or Quadra family.

MultiGate Manager SNMP allows users to manage any network devices that support SNMP (Simple Network Management Protocol), including routers, hubs, file servers and workstations. MultiGate Manager's intuitive interface may be customized by a user for optimal management of a network. Users may

These Products Available Through Bottom Line Distribution
1-800-347-1923

create multiple logical views of manageable devices. Critical device information is placed at an administrator's fingertips, including device name, IP address, the status of each device's network interfaces, alarms and TRAPs (important device messages). Complete management of MIB II and most standard MIBs, plus support for most private MIBs via NRC's patented "Drop-In" MIB support is provided. MIB II includes critical information and must be supported by all SNMP devices. Other MultiGate Manager features include the ability to ping any TCP/IP device, logging of statistics, variable polling rates for each window, a network log of TRAPs, page support for event notification and the ability to hide individual windows. MultiGate Manager uses Apple's MacTCP software (included) for full compatibility.
$2,995 retail
Network Resources Corp.; 61 E. Daggett Dr.; San Jose, CA 95134; 408-383-9300

Net Watchman
AppleTalk network early-warning monitor
Macintosh Plus or larger; System 6.0.5 or later.

Net Watchman is a comprehensive early-warning system for AppleTalk networks. It uses the AppleTalk protocols to monitor all zones, bridges, nodes and services, and notifies a network manager when there is a change in functionality or network integrity. When problems occur, a network manager can choose to be notified audibly, visually or by an electronic pager (via the page server Notify! from Ex Machina, Inc.). All alarms are logged to a file for later review. Net Watchman capitalizes on the intuitive Macintosh interface by graphically highlighting network information, featuring customizable sounds and user-definable polling intervals. Net Watchman can run under MultiFinder and sound an alarm even if it is not the application currently in use. Net Watchman also allows network managers to query nodes about types and versions running to assist in increasing compatibilities across the network. Version information returned includes System, Finder, LaserWriter, AppleShare, AppleTalk Driver and Responder. Because Net Watchman uses high-level AppleTalk protocols, it will work with any physical medium that supports these protocols, such as thick, thin and twisted-pair Ethernet, LocalTalk and PhoneNET.

NetAtlas 2.0
Creates a map of one or many networks and zones in a complex internet
Macintosh Plus or larger.

NetAtlas creates an accurate map of one or many networks and zones in a complex internet so a manager can understand exactly how computers and other devices are connected via network cables and routers. When used in conjunction with Farallon StarCommand and Timbuktu, NetAtlas enables network managers to create an accurate network map and then manage both Farallon network hardware and network users from one interface. The software creates color-coded icons for each network server, printer, workstation and router, and then provides detailed information, which can be sorted, about each network node so network managers can see who needs to update System software, etc. NetAtlas also features a comparison capability that enables a network manager to see changes between two internet maps to closely monitor network changes over time. Each color map may be saved as a PICT file, printed and saved as a Microsoft Excel file to be used as the basis of network report charts.
$695 retail

510-814-5020 (fax)

NetMap
Network management and diagnostics tool for AppleTalk networks
Macintosh 512K or larger.

NetMap provides a diagnostic means for visually troubleshooting AppleTalk networks. With NetMap, users can: track down problems, such as broken connectors within an AppleTalk network; retrieve, in a convenient columnar format, information on device names, device types, network names and numbers, device nodes and end sockets; easily locate a given device within a device list using the sort function; use Excel or any Macintosh spreadsheet that allows importation of the saved spreadsheet-ready data file; use a Chooser-like menu to select a target network from a network list; and customize look-up requirements to fit network traffic and total network size.

NetMinder Ethernet
Network management
Macintosh SE or larger; 2 MB of RAM; System 6.0 or later.

NetMinder Ethernet transforms a Macintosh into a powerful Ethernet network analyzer. This software-only program uses the Ethernet card in the computer to capture, analyze and decode data as it flows through the network. It includes all the features needed to troubleshoot, debug and monitor a LAN. NetMinder Ethernet eliminates network downtime by enabling users to quickly pinpoint problems with the network's configuration, protocols and architecture. Powerful features include packet filtering, triggering and protocol decoding for a wide range of protocol types, including AppleTalk, TCP/IP, XNS, DECnet, Novell Netware, Banyan Vines and Bridge/3Com. The program's elegant design and intuitive user interface let users begin solving network problems immediately. NetMinder is System 7 compatible. New features include real-time graphs of network traffic and artificial intelligence system to automatically find network problems.

netOctopus
Network management
Macintosh Plus or larger; System 6.0.5 or later.

netOctopus is a network workstation management tool that allows Macintosh-based administrators to gain control over the configuration of Macintosh and PC machines on their network. netOctopus polls and interacts with these network nodes without interfering with their regular operation. In addition to building an extensive index of the hardware and software configurations of all network nodes, netOctopus can install and delete software applications and data files. IBM PC and compatibles running the IPX ODI protocol can also be configured with the netOctopus PC agent and become part of the network, allowing the same functions to be carried out as with Macintosh workstations. The IPX ODI protocol stack is supplied with netOctopus. Support for scripting languages such as AppleScript lets administrators automate many tasks by using other AppleEvent-aware applications, such as spreadsheet or database programs in conjunction with netOctopus. Using AppleScript will also allow users to build their own custom installation scripts, add AppleScript menus in netOctopus and attach scripts to these menus. netOctopus can monitor software usage on the network with the supplied Software Meter, as well as conduct Software Audit reports and Software Compatibility reports.
$645 retail; administrator application plus 10 users
MacVONK Canada Inc.; 940 6th Ave. SW, #1100; Calgary, Alberta, Canada T2P 3T1; 403-232-6545, 403-232-6425 (fax) or (49) 9134-7447 (in Europe)

NetPatrol Pack
Comprehensive network management bundle
Macintosh LC or larger; System 6.0.5 or later; color monitor recommended.

The NetPatrol Pack is a comprehensive bundle of Macintosh-based network management tools that help minimize downtime, optimize performance, plan configurations and account for network resources. It includes four products: EtherPeek, Ethernet network analyzer; LocalPeek, LocalTalk network analyzer; TokenPeek, Token Ring network analyzer; and Net Watchman, AppleTalk early-warning monitor. EtherPeek, LocalPeek and TokenPeek work like a phone tap, capturing all data as it travels down the wire. Once the data is captured, EtherPeek, LocalPeek and TokenPeek are powerful tools for debugging and monitoring a network. They display captured packets and network statistics in real time, so users can see as the network changes. Users can double-click on headers to see packet contents fully decoded. LocalPeek includes decoders for SNMP, AURP, MacIP and the entire AppleTalk stack. EtherPeek adds decoders for IP, NetBEUI, NetBIOS, SNMP, ARP/RARP, NetWare IPX (RIP, SAP, NCP), Banyan Vines, DECnet (Phase IV), DEC LAT and MOP, XNS, OSI and IPTalk. TokenPeek also includes decoders for SNA. All three products let users set triggers to start and stop capture based on specified network events, set filters to isolate traffic and packets of interest and set audible and visual alarms to highlight network events. They also allow users to generate network traffic or send test packets to test connections and performance under varying load conditions.

Net Watchman is a dynamic AppleTalk network monitoring system. It uses the AppleTalk protocols to monitor all zones, bridges, nodes and services, and notifies a network manager when any item disappears or reappears, or if there is a change in functionality. If any problems occur on the network, an alarm notifies the network manager before a phone call from a disappointed user.

NetTime 2.0
Synchronizes Macintosh clocks over a network
Macintosh Plus or larger; System 7.0 or later.

NetTime synchronizes clocks over a network. The product is ideal for Macintosh PowerBook users who dial into their networks from remote sites. NetTime provides a consistent time stamp for dial-in access, data entry, electronic mail and logging. It keeps accurate file "Last Modified" dates on shared volumes. The product automatically dials into a time service to access the actual time. An entire network can be switched to daylight savings time from one Macintosh. NetTime supports local time zones on multiple time zone networks. Time zones can be edited to teach NetTime which cities or areas are frequented most. NetTime does not require a dedicated server — any Macintosh can be a time server.

Network Security Guard
Network management and security utility
Macintosh Plus or larger; AppleTalk network; System 6.0.5 or later.

Network Security Guard is an AppleTalk-based utility that will scan multiple zones for the presence of Macintosh servers and compile reports on the security of those servers. This utility was designed as a tool to combat the alarming rise in software piracy and as a safeguard against accidental sharing of confidential materials. It may also be used to explore an AppleTalk network to uncover all available servers and files. The reports provided by Network Security Guard include the following data: computers that have file sharing enabled; servers that allow guest access; a list of files accessible to guests; and a report, alerting users to suspicious configurations on the network. Other features include: the ability to schedule checks to

minimize network load; the ability to search for specific file names on the network; and online help. Network Security Guard is available in three, 10 and unlimited zone versions. Trial versions are available for downloading from most major online systems.
$219 retail
MR Mac Software; PO Box 2547; Del Mar, CA 92014; 619-453-2845

NetWorks
Network monitoring
Macintosh Plus or larger; 2 MB of RAM; System 6.0.5 or later.

NetWorks is software that uses standard pagers, E-mail and alarms at the terminal to alert network managers of potential problems on their network. NetWorks monitors all AppleTalk, TCP/IP, Novell IPX, DECnet and SNMP registered nodes, servers, routers, printers and network services and alerts a manager when any of these disappear or reappear on the network via a paging device or electronic mail — not just on their terminal. Automatic follow-up procedures can be used to escalate the problem to others when a trouble report remains unresolved. NetWorks also monitors server disk space and reports on LaserWriter status. NetWorks flexible notification and follow-up features make sure that network problems are not just identified, but resolved.

Nok Nok
File sharing monitor
Macintosh Plus or larger; System 7.0.1 or later.

Nok Nok alerts users of System 7 when others attempt to "visit" their Macintosh. Nok Nok increases security by identifying all visitors by name, even those attempting to log in as "guest," and notifying users of file sharing connections with a dialog, flashing icon, sound or opening of the sharing monitor window. If users are away from their machine, Nok Nok maintains a log of connections for later review. Nok Nok helps improve performance by allowing users to restrict the amount of time others can stay connected.

Nok Nok A/S
File server monitor
Macintosh Plus or larger; System 7.0.1 or later; AppleShare 3.0 or later; 4 MB of RAM.

Nok Nok A/S extends the functionality of AppleShare administration in three areas: security, performance and configuration planning. Nok Nok A/S increases security by identifying all visitors by name, even those attempting to log in as "guest," and notifying the administrator of file sharing connections with a dialog, flashing icon, sound or opening of the sharing monitor window. Nok Nok A/S helps improve performance by providing a mechanism for automatically disconnecting users who are idle or connected for an inappropriate period. Nok Nok A/S simplifies configuration planning and management with detailed statistics tracking server usage by time, user and location of user.

PacketSend
Allows users to interrogate routers
Macintosh II or larger; System 7.

PacketSend allows users to send ZIP Query, ZIP GetNetInfo, ZIP GetZoneList, ZIP GetLocalZones and RTMP Route Data Request. They can query any network or zone in their internet. With PacketSend, users can question a particular router or all of the routers on a backbone at the same time. The easy-to-follow manual will show users how to set EtherPeek filters to screen out the answers, and quickly find a router with incorrect network or zone information.
$50 retail

Quota 3.0
Macintosh license server
Macintosh Plus or larger; any AFP-compatible network; System 6.0 or later.

Quota is a Macintosh license server that controls concurrent application use on local area networks by limiting application launches to the total number of licensed copies. If all copies of an application are in use, Quota prevents additional copies from being launched and provides a queuing option that notifies waiting users when the application becomes available. All applications that are monitored by Quota are fully copy protected and will not function unless the license server has authorized the launch, making illegally copied software useless. Quota also supports a "Check Out" feature that enables authorized individuals to disconnect their computers from the network and use any of the installed applications for a limited time. A comprehensive audit trail feature records many types of user and application activity, such as log in/out, application launches, launch denials, administrative access and printing. This audit trail data can be used for tracking network usage patterns and for justifying future software investments.

Proteus Technology; 9919 68th St.; Edmonton, Alberta, Canada T6A 2S6; 403-448-1970 or
403-465-5322 (fax)

Radar 4.0
Network administration
Macintosh Plus or larger.

Radar is a network administration package that allows an administrator of a Macintosh local area network to perform information gathering functions, such as list dedicated hardware and software for a particular node. The workstation can be administered through file downloading, system updating and clock synchronization. Information can be gathered about networked printers, i.e., number of pages printed and fonts, and Radar also has the ability to download fonts, rename the printer and turn the startup page on/off, etc. All the above features can be performed through the report generator over multiple machines, producing a spreadsheet-style report that can be viewed, printed or imported into other applications. The entire network can be viewed via a topology map that shows all nodes and their services. Alarms can be set through the topology to notify the administrator of various occurrences, such as a server going down or a printer running out of paper. Alarms can be sent to an E-mail gateway, a pager, the screen or a log. Radar is fully System 7 compatible and supports balloon help.

RouterCheck
Tracks and monitors AppleTalk routers
Macintosh Plus or larger.

RouterCheck tracks and monitors AppleTalk routers from a Macintosh located anywhere on the internet. RouterCheck profiles and reports router configuration information by compiling a list of AppleTalk routers' net, node and zone name. Information such as router type, name, serial number, model number and software version can also be obtained, depending on the type of router. RouterCheck identifies and records zone configuration errors and recommends actions to correct them. Powerful monitoring and graphing features enable users to optimize network performance and alert them to potential problems. RouterCheck supports SNMP.

Skyline
Traffic archiving and analysis software
Macintosh SE/30 or larger; System 6.0.5 or later; color monitor recommended.

Skyline provides managers of mixed vendor, multiple-protocol networks with a graphic history of network traffic and utilization in the form of a skyline chart. For any time period represented, Skyline will display, with point-and-click simplicity, details about network utilization in the aggregate, as well as by node. Skyline is designed to provide a great deal of information visually. The main window shows a histogram-type chart, each bar representing network utilization over a time period ranging from 1 second to hours or even days. The bars may be assigned varying colors, depending on the level of traffic represented. A number of secondary windows provide detail on a specific time period in the main window. Double-clicking on a bar in the main window instructs Skyline to detail the traffic in that time period by node (transmission and destination as a percentage of overall network traffic) and protocol (traffic by protocol type as a percentage of network traffic). Skyline is designed to assist network managers in their efforts to troubleshoot and debug networks, practice proactive network management, optimize existing hardware and plan for future expansion.

SoftLibrarian 2.0
Manages software applications and prevents software piracy on a Macintosh network
Macintosh Plus or larger; System 7.0 or later.

SoftLibrarian manages software and prevents software piracy on Macintosh networks or stand-alone machines. It allows users to create libraries to define how software will behave, add their software to the libraries as members and use AppleShare or file sharing to create software servers. Features include: license control, copy and version control, custom dialog and logging software use. SoftLibrarian meters six types of licenses: Copy, User, CPU, Server, Unlimited and Concurrent Use. Member applications that cannot find the library cannot be used, preventing illegal use of software. Every application added to a library can be configured uniquely. Users can turn on software logging to monitor trends when buying new software or upgrades. Members are automatically copied to local hard disks to minimize network traffic. SoftLibrarian works with or without a network or server.

Status*Mac V3.0
Allows Macintosh managers to perform comprehensive, system-wide hardware/software audits and inventories
Macintosh 512KE or larger; hard disk drive; System 6.04 or later.

Status*Mac allows Macintosh network and support managers to perform system-wide inventories, asset tracking, workgroup standards management, software license compliance verification and System 7 transition tasks. It enables managers to remotely gather comprehensive information about all hardware and software associated with each Macintosh within their domain. This includes non-networked and dial-in Macintoshes. The administrator has the option of gathering data immediately, at a scheduled day/time or automatically on shutdown. Information is returned as Status*Mac "profiles." Profiles are imported into the Macintosh manager's Master Database for in-depth analysis. Managers can generate their own reports or use any of Status*Mac's 75 built-in expert reports to identify common support problems. Status*Mac includes the System 7 Readiness Kit with Status*Checker, a special application that allows Apple's Compatibility Checker stack to run against a Status*Mac database. Version 3.0 features charts, remote updating and profiling of PostScript printers.

Heizer Software; PO Box 232019; Pleasant Hill, CA 94523; 510-943-7667, 800-888-7667 or 510-943-6882 (fax)

TalkManage
Network management software
Macintosh II family; 5 MB of RAM recommended for larger networks; math coprocessor recommended.

TalkManage performs across the entire enterprise-wide AppleTalk internetwork, regardless of the physical media, to provide auto discovery, inventory management, configuration and topology mapping, integral third-party router and hub access, remote fault traps, alarms and logs. Features include: establish a concise framework and toolset for AppleTalk network management; manage AppleTalk as part of the corporate backbone; respond to the entire AppleTalk internet from a single point, across the routers; provide a consistent framework for multivendor router management; isolate and collect empirical service levels and thresholds; in conjunction with the MailMan option, notify the network administrator of an incoming alarm remotely; accumulate and report essential management information to assess network costs; and optimize the planning for network growth and change to support business goals.
$695 and up retail
Distributed Technologies Corp.; 275 Wyman St.; Waltham, MA 02154; 617-684-0060 or 617-684-0072 (fax)

TalkStat/TalkSpy
Provide traffic statistics, network performance and packet data from LocalTalk/PhoneNET networks
Macintosh II family; 4 MB of RAM recommended; math coprocessor recommended.

TalkStat and TalkSpy provide traffic statistics, network performance and packet data from LocalTalk/PhoneNET networks to supply network behavior profiles and trends; isolate causes of bottlenecks and errors; and utilization and capacity planning.

TalkStat performance and utilization features five real-time graphical windows, independently controllable, that display key LocalTalk/PhoneNET network performance statistics for network analysis and trouble shooting, simultaneous, background data collection of network utilization summary, protocol utilization and packet error statistics at separate controller, user-specified intervals for historical network profiling and trend analysis.

TalkSpy features include: identify network and packet errors on LocalTalk/PhoneNET network segments; isolate corrupt packets that cause network integrity errors; trace packets that are symptomatic of network degradation or future failure; and detailed packet header information is available for all AppleTalk protocols.
$395 retail; both programs
Distributed Technologies Corp.; 275 Wyman St.; Waltham, MA 02154; 617-684-0060 or 617-684-0072 (fax)

TechWorks Net Utilities
Five assorted network management applications
Macintosh Plus or larger; System 6.0 or later.

TechWorks Net Utilities is a collection of tools for keeping track of network devices and alerting network administrators to network problems. These include an alarm system that notifies the administrator if specified devices appear or disappear from the network; a packet timer for testing connections between devices; printer querying for fonts, memory and status; name scanning for basic Macintosh information (node ID, network ID, socket number, etc.); and real-time conferencing. This collection has been designed as a basic, affordable alternative to high-end network management systems.
$129 retail
TechWorks; 4030 Braker Ln. W, Ste. 350; Austin, TX 78759; 512-794-8533, 800-688-7466 or 512-794-8520 (fax)

TokenPeek
Token Ring network analysis software
Macintosh SE/30, II or larger; color monitor recommended; System 6.0.5 or later; Token Ring network interface.

TokenPeek is a Token Ring network analysis package that makes the complex tasks of network monitoring and debugging easy, graphic and customizable. It uses graphs, color and customizable sounds to capitalize on the Macintosh interface and simplify network management. TokenPeek offers features that can localize problems, perform sophisticated diagnostic tests, monitor network loads and events, test hardware and software and provide information for the management and planning of network configurations. TokenPeek works like a phone tap, capturing all data packets on the network. Advanced features include filters that allow captures to be limited to specific addresses and protocols; triggers, a setting that allows user-specified events to start or stop a capture; and audible alarms that warn of threshold violations or new/unknown nodes and protocols. TokenPeek's protocol decoders allow net managers to inspect packet contents, including protocol layers and data. TokenPeek comes configured to decode SNA, IP, NetBEUI, NetBIOS, OSI, SNMP, ARP/RARP, NetWare IPX (RIP, SAP, NCP), Banyan Vines, DECnet (Phase IV), DEC LAT and MOP, XNS, IPTalk, AURP and the entire AppleTalk stack. Finally, TokenPeek allows users to construct and send "test" packets onto the network.
$995 retail
The AG Group; 2540 Camino Diablo, Ste. 202; Walnut Creek, CA 94596; 510-937-7900 or 510-937-2479 (fax)

TrafficWatch II
Network traffic monitor
Macintosh Plus or larger.

TrafficWatch II monitors traffic on Ethernet and LocalTalk networks. By tracking network traffic over time, TrafficWatch II provides the information users need to make decisions about adding new devices to the network or redistributing devices or services to maximize the network's performance. Real-time displays include network utilization, traffic rates for individual nodes, protocol usage and error rates. And for long-term trend analysis, TrafficWatch II can autosave traffic information for import to the TrafficChart Excel macros included with the application. TrafficChart creates illustrations of traffic information in graph form for presentation. Beginning with release 2.0, TrafficWatch II runs on a full range of Ethernet interfaces and can monitor protocol usage for a broad range of Ethernet protocol types, including TCP/IP, NetWare, DECnet and AppleTalk.

Neon Software, Inc.; 3685 Mt. Diablo Blvd.; Lafayette, CA 94549; 510-283-9771 or 510-283-6507 (fax)

WatchTower
Network management
Macintosh SE or larger; 2 MB of RAM; MacTCP (included); LocalTalk/IP gateway; EtherTalk-compatible Ethernet adapter; System 6.0 or later.

From a practical standpoint, a network manager is primarily concerned with fault detection, isolation and resolution with a minimum of service interruption. To this end, the primary functions of a network management station, such as WatchTower, are to provide ready access to statistics and information about each available network entity, to present the network information in a useful form and to alert a manager of problems or potential problem situations. WatchTower creates this ideal environment in which all network components are manageable, and a user's management station is available and manned at all times. This allows the maximum amount of flexibility and accuracy in fault isolation, as well as a method for early warning detection. WatchTower is built around SNMP, the Internet standard for network management. Therefore, it is not dependent upon any proprietary protocols for monitoring and management, and should require no additional cost or engineering to manage a diverse group of network entities. Already, the majority of the networking industry has embraced SNMP by providing agents in existing products, enabling network managers to take advantage of the full power of the WatchTower management station.

■ **The Wall Street Journal Reports Disk Companion On Online Services**
Exploration of online options for personal computer users
Macintosh II or larger; 5 MB of RAM; 2 MB of free hard disk space; 13-inch or larger color monitor; 8-bit color card recommended; System 7.0.1 or later.
The Wall Street Journal Reports Disk Companion on Online Services is an interactive version of the November 1993 Wall Street Journal Report on Technology. The Wall Street Journal Reports are single-topic news features that provide indepth coverage of such subjects as health and medicine, executive compensation, personal finance and world business. The Disk Companion on Online Services offers the full text of the Technology Report with printing and index enhancements in addition to an exclusive database of new information that lets users examine and compare the offerings of more than one dozen online providers. The providers include seven major services, five Internet links and four bulletin boards. In addition to a guide to finding the right service, users are provided with an overview of how to get started — what they'll need to set up, costs and where to get more information.

Desktop Communications/ Telecommunications Software

1stBBS-II
Bulletin Board system with remote database access
Macintosh Plus or larger; 1 MB of RAM.

1stBBS-II provides a powerful data communications system, linking together Macintoshes and DOS machines that have modems or are connected to an AppleTalk network. Remote users would have the ability to access databases, transfer files and E-mail capability. 1stBBS-II would prove invaluable for companies with branches in many different cities. All remote users would have the ability to access databases, such as a customer address list, price list, inventory, etc., and to send private E-mail messages with files attached. Registered owners of 1stBBS-II are licensed to make an unlimited number of copies of the Mac or DOS version of the remote modules. The program is designed to minimize online time and expense by allowing users to perform many of their tasks while offline. The host module is password protected and maintains an activity log. 1stBBS-II is AppleTalk and System 6/7 compatible. Modem speeds up to 38,400 bps and V.32 and V.42bis are supported.
$129 retail
1stDESK Systems, Inc.; 55-57 Cape Rd.; Mendon, MA 01756; 800-522-2286 or 508-634-0882 (fax)

■ **4-Sight ISDN Manager**
ISDN/Switched 56 communications software
Macintosh with NuBus; System 6.0.5 or later; 2 MB of RAM.
4-Sight ISDN Manager ISDN/SW56 provides a simple method of performing point to point file transfers between distant locations at speeds of up to 128 KB/sec, utilizing the twin 64 KB/sec data channels offered by ISDN circuits — more than eight times faster than a 9600 baud modem. ISDN Manager is extremely flexible and can utilize the twin ISDN channels in a number of ways to allow voice and data calls to be made simultaneously. ISDN Manager also offers CommToolBox support for applications such as AppleTalk Remote Access or ZTerm, and a Serial Redirector for non-CTB compatible applications such as Timbuktu Remote — enabling these and other applications to run at incredible speeds over an ISDN or Switched 56K connection. ISDN Manager can fully utilize the new international ISDN network, providing the ability to create high-speed connections around the globe as easily as making a local call.
$2,995 retail; includes hardware
$1,495 retail; software only
CommFORCE, L.C.; 1801 Industrial Cir.; PO Box 65340; West Des Moines, IA 50265; 515-224-0211, 800-448-3299 (fax) or 011-44-202-764401 in U.K.

■ **4-Sight Small Site**
Network fax communications
Macintosh Plus or larger.
4-Sight Small Site is a 10-user version of 4-Sight Fax, without E-mail. Small Site offers a full range of features, including send and receive capabilities, faxing from within a document, custom cover pages, multiple enclosures, notification and accounting. It comes with a free 19.2 Kbaud data/14.4 Kbaud fax modem.
$995 retail

ASAP!
Allows users to send files by simply dragging documents to an icon
Macintosh Plus or larger; System 7.0 or later.

ASAP! makes users the easy first choice for their customers. By putting a copy of ASAP! on their customer's desktop, they can send users files by simply dragging documents to an icon. Users and their customers don't need to know the first thing about telecommunications technology. They just drag files to a user's icon, and ASAP! handles the rest. It automatically compresses the file (reducing transmission time by up to 80 percent), configures the modems and sends the files. On a user's end, there's a comprehensive job-logging application. Much simpler than a BBS or ARA, ASAP! can be used by even the most inexperienced customers. It automatically configures itself, completely protects a user's system from invading hackers and guarantees 100 percent accurate high-speed transmission.

Communicate Lite
Provides standard access to a wide variety of communications services
Macintosh Plus or larger; System 7.0 or later.

Communicate Lite makes use of the Macintosh Communications Toolbox, system software that provides Macintosh applications with standard access to communication capabilities in a modular fashion. Communicate Lite provides users with easy access to multiple communications sessions, utilizing the same or different methods of connection. Users can customize their communication environment by adding or removing tools as needed. The basic set of communications tools is included. With additional tools available, the functionality of the program can be greatly extended.
$49.95 retail; demo version available

Communications Support Toolkit
Routines for accessing serial ports
Macintosh Plus or larger; True Basic Language 2.0 or later.

Communications Support Toolkit allows True Basic programs to send and receive data via an asynchronous communications port. The program can be used to communicate with remote databases such as Dow Jones or The Source.
$79.95 retail
True BASIC, Inc.; 12 Commerce Ave.; West Lebanon, NH 03784; 800-436-2111

CompuServe Information Manager
Information management
Macintosh Plus or larger; 1 MB of RAM; one 800K disk drive and hard disk drive; System 6.0.4 or later; Hayes-compatible modem.

The CompuServe Information Manager provides a powerful, yet easy-to-learn and use interface to the CompuServe Information Service. By incorporating pull-down menus, dialog boxes and several other features, the CompuServe Information Manager enables members to access, sort and utilize information more effectively.
$24.95 with $15 usage credit retail; for members of CompuServe Information Service
$49.95 with $25 usage credit retail; for non-members
CompuServe, Inc.; 5000 Arlington Centre Blvd.; Columbus, OH 43220; 800-848-8199

CompuServe Navigator
Automated access software
Macintosh 512KE or larger; double-sided 800K disk drive; hard disk drive; System 4.1 or later; Hayes-compatible modem.

CompuServe Navigator is designed to simplify access and use of the CompuServe Information Service, particularly when accessing special interest forums, Quotes and CompuServe Mail. It adapts CompuServe to the familiar Macintosh idiom usage with pull-down menus and dialog boxes. With CompuServe Navigator, a Macintosh user can write a complete session before going online, saving connect time charges. The product supports MultiFinder, allowing word processing or other programs to be used while the CompuServe Navigator program is running. CompuServe Navigator also supports direct transfer of graphics images created using CompuServe's Graphics Interchange Format (GIF).
$99.95 retail
CompuServe, Inc.; 5000 Arlington Centre Blvd.; Columbus, OH 43220; 800-848-8199

ConcordExpress
High-speed file transfer software
Macintosh Plus or larger; 1 MB of free RAM; hard disk drive; System 7.0 or later.

ConcordExpress is a high-speed file transfer application that utilizes a proprietary protocol to quickly transfer files and folders over satellite links, digital phone lines or LAN connections. ConcordExpress is designed to overcome the acknowledgement delays inherent in wide area networking, including those encountered with satellite connections.
ConcordExpress is composed of three software components. The Sender program is used at the transmit site and allows users to transfer files by simply placing them in destination folders in a "mailbox" folder. The reception of files is processed as a background task at the receive site. A special "Receiver" init resides on the receiving Macintosh and incoming files are stored in a mailbox folder. The Monitor program lets users view the status of files reception and files received.
$499 retail
Engage Communication, Inc.; 9053 Soquel Dr.; Aptos, CA 95003; 408-688-1021 or 408-688-1421 (fax)

DynaComm Macintosh Edition
Communications
Macintosh Plus or larger; hard disk drive; Finder 6.0 or later; MultiFinder 6.0 or later for background file transfers.

DynaComm Macintosh Edition is an advanced communications package that supports a wide range of binary transfer protocols and the most popular terminal emulations, allows users to store and recall communications parameters and allows the creation of 32 user-definable function keys. It has a built-in editor that features automatic text wrap at user-specified margins, full cut-and-paste capabilities, search and replace abilities and text merge, align center and reformat options. DynaComm's script language provides all the tools needed to create full-scale graphical communications applications. The script language includes commands that provide high-level programming capabilities such as conditional execution, tabular data manipulation, subroutine execution and event handling using WAIT and WHEN commands. Menu options have analogous script commands so that tasks usually performed interactively may be automated.
DynaComm features commands that create custom dialog boxes and pull-down menus to allow users to reconfigure the user interface and graphically organize the presentation of incoming data.

■ Easy Transfer
File transfer/server
Any Macintosh.

Easy Transfer is powerful file transfer software that can be used with modems and ISDN or as a server to manage several different connections and carry out simultaneous transfers. Easy Transfer lets users send or retrieve files or folders; it can act as a server; enables communications with a connected site by sending messages to each other; manage a directory of outgoing and incoming calls; and do batch transfers. Easy Transfer uses APC compression, obtaining speeds up to 250 Kbits/sec, and contains many security features.

EGTalk
Japanese communications software
Macintosh with 4 MB of RAM; KanjiTalk 6.0.4 or later; System 7.1 and Japanese Language Kit.

EGTalk is a Japanese communications software package. EGTalk allows users to access world-wide BBS databases at data transmission speeds ranging from 300 bps to 57,000 bps. Features include: flow control, display of time periods of communications, XON, XOFF, CCITT & Bell standards. EGTalk is easy to control with auto-communications functions, real-time data transfer, Xmodem protocol and MacBinary protocol. EGTalk also allows for printing while in the process of communicating. EGTalk supports Chinese character codes, JIS, NEC Kanji, DEC Kanji and EVC Kanji.

Face To Face
Document conferencing software
Macintosh with 5 MB of RAM; hard disk drive; System 7.0 or later.

Face to Face is document conferencing software that allows people anywhere to use their telephones and desktop computers to review and annotate documents together, in real time. With Face to Face, two users of any mix of Macintosh and Microsoft Windows-based computers can simultaneously view documents, guide one another with electronic pointers and make instantaneous annotations using a simple set of drawing tools — all while they talk on the telephone. Users can accomplish all of this without regard for the types of computers involved (Macintosh or Windows), the particular applications used to create the documents (Word, WordPerfect, PageMaker, etc.) or the type of network available — whether it be ordinary, low-speed modems, a LAN or a high-speed service like ISDN.

FAXnetwork Fax Software
Network fax solution
Macintosh with 68000 processor or larger; hard disk drive; 2 MB of RAM; System 6.0.3 or later; any Class 2 fax modem.

PSI FAXnetwork is an exciting fax solution designed for Ethernet and LocalTalk Macintosh networks. With this powerful software, each workstation can transmit faxes using a single, centralized modem. It's a great way for users to stretch their hardware dollar and enhance their work group's productivity. Because PSI FAXnetwork works completely in the background, no dedicated server is required. FAXnetwork is easy to use; setup is quick. This ultrafast network fax software can send a three to five-page document from a client workstation to the server in approximately 10 seconds. Server dial-out time is approximately one minute. The FAXnetwork Server software can be installed on a user workstation or an AppleShare Server. FAXnetwork can receive faxes as easily as it sends them, route them automatically to the network printer or send them to individual workstations.

FaxPro II And FaxPro II 14.4
Networkable fax system
Macintosh Plus or larger; 2 MB of RAM; System 6.0.3 or later.

FaxPro II multiuser fax system for the Macintosh lets networked users send and receive faxes directly from their desktop. Users on a network can share one or more fax modems to fax virtually anything they can print. Users can pre-convert and attach fax-ready files to include with their fax. Remote conversion of fax files frees up users' workstations. All users have real-time access to information about their fax transmission. Other features include: compatibility with more than 30 modems; the ability to combine the fax and file server; auto mount and dismount of file server; InstaFax quick fax feature; auto redial and Smart Resend to ensure complete transmission; optional printing of incoming faxes for plain paper fax equivalent; and customizable automatic cover sheet.

FaxSTF 3.0
Full-featured fax software
Macintosh Plus or larger; 4 MB of RAM; hard disk drive; System 7.0 or later; compatible fax/data modem.

FaxSTF is full-featured fax software that allows users to create, address and send faxes directly from applications. New features include: gray-scale printing support; combining (enveloping) faxes; new user interfaces with separate windows for incoming, outgoing, held and saved faxes; FaxSettings application — easy access to modem and software settings; ARA and AppleScript support; improved log file; integrated import/export capabilities; and more. FaxSTF offers advanced features to enhance a user's fax capabilities, including: multiple, editable phone books (users can add new listings "on the fly," import, export and print their phonebooks); multiple retries (only unsent pages are resent); scheduling faxes for later transmission (when rates are lower); viewing received faxes on-screen (to save printing time); custom cover pages (users can create cover pages with their company logos, etc.); and custom paper sizes (for sending large spreadsheet or graphic files).

File Transfer Tool Bundle
Three file transfer protocol tools for communications applications and E-mail software
Macintosh Plus or larger; System 6.0.7 or later.

File Transfer Tool Bundle is a collection of three file transfer protocol tools for communications applications and E-mail software that supports the Macintosh Communications Toolbox. The file transfer protocols supported by File Transfer Tool Bundle are Kermit, Xmodem, Ymodem and Zmodem. Popular Macintosh applications that can use Macintosh Communications Toolbox file transfer tools are: CE Software QuickMail 2.5; Seaquest Message Mover; Microsoft Works 3.0 (includes Seaquest's Kermit File Transfer Tool); ClarisWorks; WordPerfect Works; Apple MacTerminal 3.0; and PacerTerm.

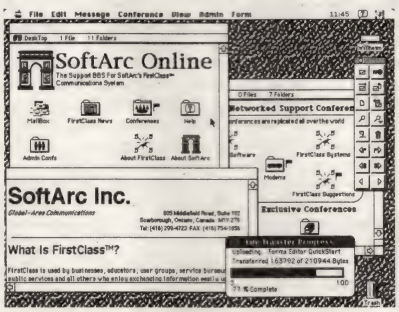
FirstClass
Cross-platform electronic mail, conferencing and remote access software
Macintosh Plus or larger; modem and network optional.



FirstClass is used by businesses, educators, user groups, service bureaus, public services and all others who enjoy exchanging information easily using the Macintosh and Windows interfaces. FirstClass saves users money by combining electronic mail, file sharing and electronic discussions seamlessly over networks and telephone lines and provides an outstanding, configurable graphical interface for doing so. FirstClass combines the features of a complete office electronic E-mail package and network conferencing system for electronic discussions. Its integrated remote dial-in functionality makes it ideal as an electronic bulletin board system for public access or customer support. A FirstClass client for Windows lets IBM and compatible users log in via network or modem without the need for complicated file servers or routers required by other multiplatform communications packages. SoftArc's FirstClass server software can run on any non-dedicated Macintosh and accommodate as many as 100 simultaneous network connections and 22 concurrent modem users.

GlobalFax Duo
Fax software
Macintosh PowerBook Duo; 4 MB of RAM; 2 MB of available disk space for receiving and storing faxes; System 7.1 or later.

GlobalFax Duo is a new version of GlobalFax software for customers using Macintosh PowerBook Duo systems. GlobalFax is for users looking to standardize on one fax software package for fax/modems across the entire Macintosh product line. Efficient, intuitive and feature-rich, GlobalFax Duo allows users to import and export address information from other contact databases, group multiple documents from different applications and fax them together and fax from different area codes without editing their address book. GlobalFax Duo also allows users to send faxes to individual addresses and groups of addresses without personally filling out each cover page. Users can continue working in any software application as GlobalFax Duo sends and receives faxes in the background. Users can monitor the progress of fax transmissions on the convenient menu bar status display.

■ **InterPPP**
Provides remote access for System 7 users to network
Macintosh SE or larger; 4 MB of RAM; System 7.0 or later; Mac TCP; Hayes-compatible modem.

InterPPP is a standards-based solution that implements Point-to-Point Protocol according to published Request for Comments (RFCs). Developed by the IETF in cooperation with network vendors, Point-to-Point Protocol is a documented standard for connecting workstations to networks that is being deployed by many router and terminal server vendors as the standard solution for dial-in network access. InterPPP is at the forefront of remote access for System 7 users. With InterPPP, remote or mobile users can gain network access by dialing into a terminal server, router or network front end that supports PPP. InterPPP fully supports TCP/IP and AppleTalk for simultaneous and transparent access to all available TCP/IP and AppleTalk services on the network.

■ **InTouch Quikdial**
Adds telephone menu to menu bar
Macintosh Plus or larger; 2 MB of RAM; System 7.0 or later.

Quikdial adds telephony to a Macintosh by adding a telephone menu to the menu bar that is available no matter what application is running. Making a call couldn't be easier. Users choose dial from the Quikdial menu and enter the number; Quikdial handles all the simple functions, such as dialing, answering and hanging up, as well as the more complex features, such as rescheduling calls, call transfer, call conferencing, call waiting, do not disturb and call diversion. Quikdial allows users to build up to 96 directories, with a maximum of 1,000 names in each directory. Quikdial also logs the time, date and caller of each outgoing call.

■ **LineShare**
Route/direct incoming and outgoing calls
Macintosh Plus or larger; System 6.0 or later; Hayes-compatible modem; telephone line.

LineShare can arbitrate and route incoming calls to the correct application, and direct outgoing calls to the user's modem. Users can concurrently have ARA, BBS, voice, E-mail, data, pager and fax all open for incoming or outgoing calls using one modem port and one phone line. LineShare is System 7 compatible.
$79 retail
Stalker Software, Inc.; 15 Skylark Dr., #21; Larkspur, CA 94939; 415-927-1026 (phone/fax) or 800-262-4722

■ **The Link**
Enables interconnection of remote AppleTalk networks
Macintosh Plus or larger; System 6.0 or later.

The Link enables the interconnection of remote AppleTalk networks transparently via ISDN, X.25 network, the switched telephone network or any other communication support. Network resources can be used remotely. Users can print on a LaserWriter in one location, consult a database in another or access an AppleShare server in another. The Link offers simplified connection with management of aliases on System 7; virtual connection on permanent link; up to eight to 31 simultaneous connections on the same Macintosh; built-in APC compression, optimizing communication throughput; access restrictions for all authorized sites; network traffic and routing statistics; and more.

MacIntercomm Lite
Telecommunications with completely invisible file transfers
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later.
MacIntercomm is a telecommunications program with true multitasking that offers completely invisible file transfers. Users can compress files, format a floppy or even play a game during file transfer and MacIntercomm will not lose speed or data. Its full suite of transfer protocols include Xmodem, Ymodem, Ymodem-G and Zmodem. This is complimented by a wide array of terminal emulations, like TTY, VT52, VT102 and full 16 color PC-ANSI graphics with blink, inverse, double-width and double-height modes. For added convenience, there is an AutoDial feature for a user's most frequently called services. A SmartDial feature automatically adjusts the phone numbers of a user's services based on their area code, an indispensable feature for travelling users.

Mark/Space Zmodem Tool
File transfer tool
Macintosh Plus or larger; System 6.0.4 or later.
The Mark/Space Zmodem Tool is a file transfer tool that implements the Zmodem protocol. Zmodem offers high-speed file transfer, error detection and recovery, and the ability to resume an interrupted transfer. Using the Zmodem tool and a suitable application, users are able to exchange files with their favorite BBS, another Mac running a communications application and many commercial online services.

■ MDFT (Macintosh Direct File Transfer)
File transfer kit
Any Macintosh; Mac/SD; System 7.0 or later.
MDFT is a high-speed, synchronous direct file transfer kit. MDFT allows for bulk distribution, medical image transfer, prepress downloading, database updates, remote backup and restore, moving of large documents and/or graphic files. Features include high link-rate utilization, automated V.25bis dialing support, wild cards with full pathing options, full or selective file transfers and uses commercially available switched digital services (AT&T, Sprint, MCI, USWest, PacBell, Ameritech, etc.).
$1,600 retail

Message Mover
A sound and simple solution for moving messages around the world
Macintosh Classic or larger; System 6.0.7 or later.
Message Mover is a full-featured communications application that provides an elegant and economical way for users to use their Macintosh for communicating how they want and with whom they want. Features include: simple to learn, yet flexible enough for advanced users; floating toolbar with buttons for most important commands; intuitive address book for frequently called remote systems; comprehensive Balloon Help (for System 7 users) and built-in text-based help system that works with any Apple operating system; support for the Macintosh Communications Toolbox 1.1, including ISDN and AppleTalk networks; System 7 friendly, including support for required AppleEvents, Balloon Help, TrueType and 32-bit addressing; terminal emulation for TTY and VT102; includes Seaquest File Transfer Tool Bundle supporting Xmodem, Ymodem, Zmodem and Kermit protocols; multiple-file send and receive capabilities; built-in memo/text editor; modest system requirements; and is affordable, compatible and extensible.

MicroPhone
Telecommunications
Macintosh Plus or larger; hard disk drive with 1.5 MB of free space (2.5 MB of fax software; System 6.0.5 or later.
MicroPhone Pro version 2.0 comes with a comprehensive set of tools for quick and easy TCP/IP access. Targeted to users of TCP/IP-based networks, such as the worldwide Internet. MicroPhone Pro makes interaction with such systems as intuitive as possible. MicroPhone Pro and MicroPhone II version 5.0 both feature new multisession communications capability, an improved scripting language and editor, new terminal emulation and new transfer protocols. Users rely on the Macintosh interface to connect to networks, download data, conduct online research or post E-mail. MicroPhone LT version 2.0 is a value-priced, complete communications package that enables users to easily communicate with other personal computers, minicomputers, mainframes and remote electronic information services. It is aimed primarily at Macintosh communicators who are frustrated by communications shareware.

■ NeuroPage
Messaging system for memory impaired
Macintosh Plus or larger; 4 MB of RAM; System 6.0.5 or later; Hayes or compatible modem.
NeuroPage is a novel computer-based messaging system that improves the lives of persons with debilitating impairments of memory. NeuroPage is alphanumeric messaging and cutting edge software and is the first system of its kind designed to help the more than half million Americans and millions more worldwide overcome this disability. Messages can be keyed into the system and designed to be sent at any time and date in the future to single or multiple subscribers. Confirmation that a task has been completed may be requested. If no confirmation is received by the system, NeuroPage sends out a predefined number of secondary reminder(s) before automatically sending an alert message to a third party.

NovaLink Professional 3.1
Information server
Macintosh II or larger; 4 MB of RAM.
NovaLink Professional (NLP) is a high-end communications solution called an information server. Information servers offer BBS type services with which users can access electronic mail, message forums, file libraries and real-time conferences. NovaLink clients can log on through local, modem, AppleTalk, Communications Toolbox, X.25 and TCP/IP connections which provide full Internet (SMTP,NNTP and Telnet) and FidoNet access. NLP supports on-line graphics protocols for Macintosh, Windows, DOS users. Coupled with AppleSearch, NovaLink will allow users to remotely search the contents of file servers, while online. NPL is expandable, flexible and configurable enough to meet the needs of the largest and smallest information providers.

Okyto 1.02
Macintosh to Macintosh file transfer program
Macintosh Plus or larger.
Okyto is a Macintosh to Macintosh file transfer program that is simple enough for a beginner to master in less than an hour, but has enough power for experienced users. It can be used attended by people on both sides, attended on one side and unattended on the other (with Mac friendly dialog box listings of files and folders on the remote machine's disks), or the simple Procedure language can be used to create fully automated sessions unattended on both sides. It can send and receive files simultaneously while allowing users to "chat" back and forth. It also offers complete security control, and a full audit trail of all transactions in a session. Okyto works in the background under MultiFinder.

PacerTerm
Terminal emulation communications software
Macintosh Plus or larger; 1 MB of RAM (2 MB recommended); hard disk drive recommended; System 6.0.4 or later.
PacerTerm is a communications software product that builds on Apple standards and industry standards to provide terminal emulation and file transfer capabilities in a number of networking environments. Features include: support for simultaneous terminal emulation (vt420, vt320, vt102, PC-ANSI, TTY) sessions to one or more hosts, each in its own window; single or multiple file transfer using Xmodem, FTP, Kermit or Zmodem file transfer protocols; network independence (asynchronous, Ethernet or LocalTalk connections); protocol independence (TCP/IP, Serial, LAT and others); remote access via SLIP, PPP or direct modem connections; full support for the Macintosh Communications Toolbox; HyperTalk-compatible scripting language for automating repetitive commands and building Macintosh front ends for host applications; modular design allows use of any CTB-compatible tool; and offers an advanced interface, including colorful, programmable on-screen SoftKeys, drag and drop support and a full remappable and programmable keyboard.

PhonePro
Telephone applications builder
Macintosh Plus or larger; 4 MB of RAM; hard disk drive; System 7.0 or later.

The PhonePro telephony applications builder for the Macintosh is designed to let users create and run almost any type of telephone application on the Macintosh. Using PhonePro's intuitive icon-based programming language, users can configure and arrange icons to create a broad range of inbound and outbound telephony applications. Users can build simple answering machines, automatic call distributors, order trackers, electronic bulletin boards, automatic pagers, fax on demand systems (requires FaxPro II) and complex auto-attendant systems with E-mail integration. PhonePro stores sound, text and data in a multiformat database, making import/export with other databases easy. The system integrates voice messaging with Microsoft Mail, QuickMail and Apple's OCE PowerTalk and PowerShare to bring voice mail to the desktop, and it comes with a variety of customizable plug-and-play scripts. PhonePro is System 7, Apple Events, AppleScripts, Communications ToolBox and Telephone Manager compatible and works with Apple's OCE.

$349 retail; PhonePro software (compatible with SupraFax Modem V.32 and V.32bis voice/fax/data modem)
Cypress Research Corp.; 240 E. Caribbean Dr.; Sunnyvale, CA 94089; 408-752-2700 or 408-752-2735 (fax)

■ **PortConnector**
Enables communications programs to make connections using X.25, TCP/IP, ISDN or ADSP protocols
Macintosh II or larger; System 7.0 or later.

PortConnector enables Macintosh communications programs to make connections using X.25, TCP/IP, ISDN or ADSP protocols, or with any network supported by a Connection Tool. PortConnector creates "virtual ports" for each Tool to support any application that provides a list of registered serial ports or even pre-CTB applications. For each port created, PortConnector can establish a direct serial link or emulate a Hayes-compatible modem.
$49 retail
Stalker Software, Inc.; 15 Skylark Dr., #21; Larkspur, CA 94939; 415-927-1026 (phone/fax) or 800-262-4722

QM-MailBeep
Software for Macintosh computers with QuickMail and alphanumeric pagers
Macintosh networks running CE Software's QuickMail; Hayes-compatible modem.

QM-MailBeep is a messaging gateway for CE Software's QuickMail. QM-MailBeep allows users of the mail system to send alphanumeric messages to persons carrying message receiving devices, such as the Motorola Advisor, HP95LX/HP100LX palmtop computers and others. QM-MailBeep will work with any standard QuickMail forms and supports multiple gateways for compatibility with many different paging services.

Desktop Paging Software, Inc.; 12 Scamridge Curve; Williamsville, NY 14221; 716-634-9010 or 716-634-9003 (fax)

Relevant
Graphical client/server application; Macintosh interface for DowVision
Server requires Sun SPARCstation 1+ or larger; 16 MB of RAM; 150 to 600 MB hard disk drive; SunLink X.25 7.0; SunOS 4.1.x. Client requires Macintosh with 68020 processor or larger; 4 BM of RAM; MacTCP; System 7.0 or later.

Relevant is a graphical client/server application that is integrated with Dow Jones' DowVision, a comprehensive business news and information service that includes The Wall Street Journal and five exclusive Dow Jones newswires. Arriving DowVision news is continually scanned by the Ensemble server software according to each subscriber's individual interest profile. At specified times, a Personal Digital Newspaper document is prepared and sent to the subscriber's Macintosh via electronic mail. The Relevant Personal Digital Newspaper System saves users time in two important ways. First, it can collect in a single location electronically published news from a wide variety of sources. Second, it presents the information from all these sources categorized by the users' interest. This dramatically reduces the amount of time people spend searching for the information that is important to them — such as information on clients, competitors, suppliers, legislative changes and more.
$50 per month/per user retail; introductory price

Second Sight 3.0
Bulletin board construction and maintenance environment
Macintosh Plus or larger; Hayes-compatible modem.

Second Sight is an integrated, multiline, color ANSI bulletin board construction and maintenance environment for the Apple Macintosh. It fully supports all Hayes-compatible high-speed modems, NuBus serial cards, CD-ROM drives, public and private electronic mail, chatting, full client security and tracking, unlimited files and sections. Transfer protocols include Xmodem, XModem 1K, Zmodem, ZBatch and ASCII text. It also includes AppleEvents support, a powerful survey language and external applications. It allows sysops to easily create and maintain a BBS that thousands of users can connect to, using standard terminal emulation software. It supports TTY, VT100, IBM-PC ANSI terminals.

SITcomm
Telecommunications software
Macintosh Plus or larger; 2 MB of RAM; System 7.0 or later; modem.

SITcomm makes telecommunications easier and less expensive. With its intuitive interface, SITcomm lets users communicate with almost any other computer. Once online, vast worlds open up for users to explore. With SITcomm, users can easily connect to local bulletin board services (BBS), read electronic mail, access huge libraries of files and get the latest information on stocks, airline ticketing and today's news. SITcomm comes with automated logons, a handy address book, built-in file compression and expansion and file translators for accessing files from PCs and Unix computers. Best of all, SITcomm has unique time-saving features to save users online and telephone charges.

SLIPper
Enables connections to several Internet utilities at once
Macintosh Plus or larger; 1 MB of RAM; System 7.0 or later.

SLIPper enables connections from a Macintosh to several Internet utilities at once. SLIPper facilitates many simultaneous Internet Protocol connections running over a single serial connection. With SLIPper, a Macintosh can run Telenet, FTP, News, Mail and other MacTCP applications via SLIP, Serial Line Internet Protocol. SLIPper is a Link Access Protocol (LAP) module designed as an extension to MacTCP. This extension allows MacTCP to use one of the Mac's serial ports to connect to a network using SLIP instead of running over an Ethernet or LocalTalk connection. This means users can access the full capabilities of an IP network from any location over the telephone using modems. Dedicated hardwired connections are also supported. SLIPper features: SLIP as per RFC-1055; TCP Header Compression as per RFC-114; selectable serial port with baud rates from 300 to 38,400; automated connections by using the connection script facility, which includes a debugging log; and work with numerous MacTCP applications. Included with SLIPper is NetStat, an application that allows users to monitor the status of all TCP connections currently open on the Macintosh. By selecting one of the connections with the mouse, users can view all the internal statistics that MacTCP keeps for that connection. Also, each connection's source and destination IP addresses and TCP ports are displayed along with the connection state.

Smartcom II For The Macintosh V3.4
Communications software; file transfer; automated communications sessions
Any Macintosh.

Smartcom II for the Macintosh features full language capability for French, German and English and supports Minitel terminal emulation for use with videotex color graphics services. The program also features error-free file transfers through Ymodem, Ymodem-G and Kermit; VT100/102, VT52, TTY emulation, ANSI.SYS and Prestel terminal emulation; and auto-pilots that can transfer graphics and text, taking turns "drawing" on the same image through the program's built-in interactive graphics feature. Smartcom II for the Macintosh provides support for System 7, Macintosh Communications Toolbox, Balloon Help and color.

SS->TF And FC Filer
Second Sight to TeleFinder and First Class conversion
Macintosh Plus or larger; System 6.0.5 or later.

SS->TF and FC Filer is a software utility that converts Second Sight BBS file descriptions to TeleFinder and First Class "Get Info" format. It produces a resource that is pasted into each download file listed in the Second Sight directory. This resource then allows First Class V2.0 or TeleFinder BBS users to view the description of the files online. Based on the description, users can download or pass over the file.

■ **STF AutoPak**
Productivity-enhancing modules
Macintosh Plus or larger; 4 MB of RAM; hard disk drive; System 7.0 or later; compatible fax/data modem.

STF AutoPak is a set of productivity-enhancing modules that allow users to automate how and when their fax documents are processed. STF AutoOCR automates conversion of received faxes to editable text form while maintaining the size and style of recognized text. STF AutoPrint provides automated printing of received faxes to any accessible Macintosh printer. Users can even print faxes to one printer while retaining the chooser-selected printer for other printing tasks. Background Imaging frees users to work on other tasks while their fax documents and messages are converted to fax format in the background. STF Developer Kit provides the necessary tools for programmers to fax-enable database and other custom applications.

TCP/Toolz & Toyz
Provides users of Communications Toolbox-compatible applications with access to TCP/IP network services
Macintosh Plus or larger.

The TCP/Toolz package provides users of Communications Toolbox-compatible applications with access to TCP/IP network services. TCP/Toolz lets users of communications programs log into everything from Unix workstations to supercomputers using an existing LocalTalk or EtherTalk network. By using TCP/Toolz, users can eliminate the expense of dedicated serial connections to a mainframe or minicomputer and take advantage of high-speed networking and global interconnectivity through TCP/IP networks.

■ **TEC Telephony**
Allows integration of the Northern Telecom Telephone System with 4th Dimension
Macintosh Plus or larger; System 7.0 or later; 4th Dimension 2.2.3 or later; Northern Telecom Meridian Phone System, Visit Voice driver; hard disk drive recommended.

TEC Telephony allows users to integrate the Northern Telecom Telephone System with 4th Dimension databases. TEC Telephony gives users complete control over their telephone system directly from 4th Dimension. Users can control and monitor all telephone interaction with TEC Telephony. It provides users with a seamless interface between the telephone and the data from 4th Dimension. TEC Telephony can be used to build specialized voice mail systems based on 4th Dimension. Users provide the interface that best fits their needs. TEC Telephony can be easily added to any existing 4th Dimension database.
$100 per user retail

TeleFinder Group Edition
Easy file transfers, conferencing and E-mail
Macintosh II or larger; System 7.0 or later.

Telefinder is the original GUI-based bulletin board system for 680X0 Macintoshes; and runs in native mode on Power Macintosh. TeleFinder features real drag-and-drop icons for easy file transfers, conferencing and E-mail. TeleFinder supports all Hayes-compatible modems, including V.Fast, Internet access, PICT and JPEG previews, multinode chat, user-definable text and up to 32,000 users over multiple CPUs for expandabiltiy. Client software is freely licensable to support access by Macintosh and Windows clients, plus 16-color ANSI and VT-100 terminal emulation.

■ **VacationMail**
Unix-based E-mail system
Any Macintosh.

VacationMail is a utility for Unix-based E-mail systems that automatically replies to all incoming E-mail messages while users are inaccessible. Users setup their mail account information and then create the vacation message they wish to have sent out. VacationMail is "Eudora-aware." Users of the popular public domain and commercial mail program will be able to configure VacationMail with two simple clicks — skipping the account setup step. The auto response system in VacationMail will only send one message per week to any one E-mail address and will not respond to messages from mailing lists or list servers. A full Unix-based mail account is necessary for VacationMail to run properly. VacationMail will keep users informed of periods of unavailability with the custom configurable subject and E-mail body.

VersaTerm 5.0
Terminal emulations, file transfers, networking services
Macintosh Plus or larger; LocalTalk, Ethernet, modem, SLIP or direct connect.

VersaTerm is a broad-based communications application combining high-quality, industry standard terminal emulations and the VersaTilities suite of network connections. The terminal emulations include: DEC VT100/VT220, Data Generals D210/D211 both with multiple sessions, plus Tektronix 4014 graphics emulations. The VersaTilities TCP/IP client suite focuses on exchanging data over Internet using a smoothly integrated graphical interface for accessing mail, news, directory, Telenet and file transfers. The VersaTerm SLIP extension transports TCP/IP data over a modem. Read mail, compose replies and create new mail messages all with or without a network connection. When users utilize dial-up via SLIP, a one-step command can automatically establish the connection, send mail, check for new mail and disconnect. Users can subscribe to their favorite news groups, quickly connect and read items of interest. A unique feature allows users to download selected news items to be read from their local Macintosh disk with no active network connection. Transfer files from anywhere in the world. The tools and INITs provided by VersaTerm include: MacTCP (TCP/IP), VersaTerm SLIP client, Time (client and server), VersaTerm-Server (with up to 24 output ports), and Telnet (with up to eight simultaneous sessions). File transfer protocols include Xmodem, Ymodem, Zmodem, Kermit and FTP (client and server). LAT, ADSP, modem and serial tools are also included.

Westmate
Westlaw communications software
Macintosh Plus or larger; System 6.0 or later.

Westmate is a communications package that customizes Macintosh computers for use with Westlaw, a computer-assisted legal research service. The software is designed to help a user complete a Westlaw research session in the most efficient manner possible. A user-definable button palette and pull-down menus provide access to frequently used Westlaw commands. File management features allow a user to manage information without returning to the desktop. The software can be programmed to access other online services and databases automatically. Key features include: automatic access to Westlaw and other online services; one-click Westlaw commands for frequently used functions; automatic entry of a user's Westlaw password; a new tutorial; file management features (browse, print, rename and delete); store-to-disk capabilities, including full document downloading; and various printing capabilities, including offline, dual-column printing on attached PostScript printers, which produce pages similar to those in a West reporter.

White Knight 12.0
Telecommunications
Macintosh Plus or larger.

White Knight, successor to the Red Ryder telecommunications program, supports emulation of TTY, VT52, VT100, VT102 , VT200/220 and Televideo 900 Series terminals and offers 12 different file transfer protocols, including four styles of Xmodem, three styles of Ymodem, Zmodem, CompuServe Quick-B, Flash Protocol and three styles of Kermit. It supports color QuickDraw and large monitors. It sports an interface that can be customized with icons and pictures, and an improved Host Mode for unattended remote operation. The 200+ command Procedure language allows complete automation with customizable dialog boxes, windows and menus. The 270+ page user manual is geared to all levels of experience. White Knight works in the background under MultiFinder. The features included with version 12 are built-in facilities for the procedure editor; a virtual memory text editor (which doubles as a procedure compiler); CompuServe Quick-B file transfer protocol; emulation of DEC V200/220 and Televideo 900 Series terminals; and support for basic AppleEvents, Edition Manager, AppleScripts and the Communication ToolBox. A BASIC language extension — which may be used in conjunction with White Knight Procedures — adds even more power to an already flexible and powerful communications package.

WireTap Professional
Telecommunications software
Macintosh Plus or larger; 2 MB of RAM; 1.4 MB floppy disk drive; System 7.0.1 or later.

WireTap Professional sets the business-standard for telecommunications software and will operate on either Macs or PCs. More than 20 file transfer protocols are provided, including Zmodem, Zmodem-90, SEAlink, Kermit and more. More than 300 terminal emulations are provided, including PC-Color ANSI and TeleVideo 925 to 950 emulations and more. All modems are supported, with more than 30 special driver files included for Compucom, Hayes, Everex, Microcom, MultiTech and more. The CommToolBox is seamlessly integrated. Hologlyph's Pascal script language compiler is unmatched and includes XCMD and XFCN support. Apple Events, outline fonts, 32-bit clean, Balloon Help, full backgrounding (even during transfers), stationery pads, virtual memory and process manager are all supported. Windows version is included free. Interfaces are nearly identical. Files are binary level compatible.

XCOM
Data transport
Macintosh Plus or larger.

XCOM is a facility for transferring data (including reports, jobs and files) between Macintosh and IBM mainframes, System 3Xs, AS/400s, DEC VAXs, PCs (both DOS and OS/2), Stratus/S/88, Data General, Tandem, Token Ring LANs, LAN gateways, Unix-based systems and Windows. It provides a consistent user interface regardless of the computer it is installed on. By utilizing APPC/LU 6.2, XCOM permits peer-to-peer transfers to be initiated at either end, unattended, with extensive error checking and automatic error recovery. Communications is at the operating system level, without terminal emulation. XCOM typically allows record lengths of up to 32K. It supports dial-up or dedicated lines, CPU channels, coax and token-ring LAN. It handles both binary and character data, transparently, in either ASCII or EBCDIC. XCOM provides any-to-any communications between all supported devices and is fully PU 2.1 compatible.

Desktop Communications/ Other

1stBBS-II
Bulletin board system with remote database access
Macintosh Plus or larger; 1 MB of RAM.

1stBBS-II provides a powerful data communications system, linking together Macintoshes and DOS machines that have modems or are connected to an AppleTalk network. Remote users would have the ability to access databases, transfer files and E-mail capability. 1stBBS-II would prove invaluable for companies with branches in many different cities. All remote users would have the ability to access databases, such as a customer address list, price list, inventory, etc., and to send private E-mail messages with files attached. Registered owners of 1stBBS-II are licensed to make an unlimited number of copies of the Mac or DOS version of the remote modules. The program is designed to minimize online time and expense by allowing users to perform many of their tasks while offline. The host module is password protected and maintains an activity log. 1stBBS-II is AppleTalk and System 6/7 compatible. Modem speeds up to 38,400 bps and V.32 and V.42bis are supported.

2Way Talker
Allows two users to communicate in real time
Macintosh Classic or larger; microphone; AppleTalk or EtherTalk network connection; System 6.0.7 or later.

2Way Talker is a software-only product that allows two users on an existing Macintosh network to communicate in real time using the Macintosh built-in microphone and speaker. The product allows hands-free, full-duplex voice communication while running other applications. The product makes use of EtherTalk and lightly loaded LocalTalk networks. A compression mode can be used to reduce network traffic. Talker requires a Macintosh with a built-in Apple microphone or a third-party microphone, such as Macromedia's MacRecorder. Macintoshes without a microphone may be used in a listen-only mode. Talker supports Balloon Help, core AppleEvents and is 32-bit clean. The Talker program separates the talking and listening functions into two programs. The Talk•In module allows any Macintosh with a speaker to monitor the network and listen to a conversation from any other user with the Talk•Out module. An address book feature helps with frequently called numbers.

4-Sight Fax 2.5
Network fax communications software
Macintosh with 68030 processor or larger; 1.6 MB of RAM; System 7.0 or later; Floating point chip recommended.

4-Sight Fax is a LAN based solution that lets users send and receive faxes anywhere in the world from a Macintosh or Windows computer. It is the only computer fax solution that seamlessly integrates with popular Macintosh E-mail packages. 4-Sight Fax is a true client-server system — it does not require FileSharing or AppleShare to connect the users to the server, however it is compatible with both. Originally designed for large corporate sites, configurations are now available for as few as 10 users. 4-Sight Fax users enjoy many benefits — one step faxing from within applications, multiple enclosures, automatic queuing, self archiving activity log, advanced accounting, notification and custom cover sheets. 4-Sight offers unlimited expansion capabilities by adding phone lines and servers. Windows client and DID routing available.

4-Sight Fax Solo & EagleEye OCR
Fax/modem and OCR software
Macintosh SE or larger; 4 MB of RAM; System 7.0 or later.

4-Sight Fax Solo and EagleEye OCR combine powerful, fully-featured and easy-to-use software for Macintosh-based faxing. 4-Sight Fax Solo is the stand-alone version of the 4-Sight Fax network fax/modem software developed by 4-Sight Ltd., U.K. (licensed through CommFORCE, L.C. in the U.S.) and offers many of the same features as the network version. Compatible with many popular fax/modems, 4-Sight Fax Solo allows simple keystroke faxing with automatic reverting to a user's normal printer selection in the Chooser. The software also allows faxing of multiple documents from different applications. EagleEye OCR software offers superior recognition of poor quality and low-resolution fax documents with less than 1 MB of RAM and only 2 MB of hard disk space required. EagleEye is extremely easy to use. Automatic layout recognition allows for very little user interaction. The translation is fast, and EagleEye OCR also recognizes and maintains graphics and illustrations.

Apple Internet Router
Allows AppleTalk network users to easily connect local and remote workgroups together
Macintosh Plus or larger; 4 MB of RAM; System 7.0 or later.

The Apple Internet Router product family provides wide-area networking (WAN) connectivity by implementing a new technology — called the AppleTalk Update-based Routing Protocol (AURP) — which significantly reduces network traffic. Additionally, the router software provides enhanced local area networking (LAN) support, routing data between industry standard LocalTalk, Ethernet, Token-Ring and other network types. The Apple Internet Router product family includes a base connectivity kit and two Apple extension kits for moving AppleTalk data across foreign (non-AppleTalk) networks. The Basic Connectivity Package provides the core routing software and technology, including a dial-up extension for connecting remote workgroups together over standard telephone lines, as well as network management support through the industry standard Simple Network Management Protocol (SNMP). It also provides the base product on which other extensions can be built. Apple's two extension packages — the AppleTalk/IP Wide Area Extension and the AppleTalk/X.25 Wide Area Extension — provide wide area AppleTalk routing over TCP/IP and X.25 networks, respectively.

AppleTalk Connection And TCP/IP Connection For Macintosh
Enable system administrators to manage Macintosh computers on their global networks using existing SNMP management consoles
Macintosh Plus or larger; System 7.0 or later.

AppleTalk Connection and TCP/IP Connection bring SNMP manageability to any Macintosh computer running System 7. Both products provide a new System 7 service called the SNMP Manager, which is designed to support SNMP agents from Apple and Apple developers. The SNMP agents provided with AppleTalk Connection and TCP/IP Connection include the Network Agent, which collects data on the network data links; the AppleTalk Agent and TCP/IP Agent, which collect data about their respective transport protocols; and the Macintosh Agent, which collects data about the Macintosh computer hardware and software configuration. These agents allow system administrators, using a variety of different platforms, to track Macintosh computers over a network and to easily identify and diagnose network-related problems. The AppleTalk Connection is a complete networking product that includes data link drivers for LocalTalk, Ethernet and Token Ring, the AppleTalk transport protocols, NBP built-in naming service and SNMP network manageability. It provides a foundation for network printing and file sharing, as well as for collaborative and client-server applications, such as electronic mail and database service. The AppleTalk Connection product provides a convenient way for Macintosh customers to add SNMP manageability while updating the AppleTalk software that comes bundled with their systems. TCP/IP Connection provides the software necessary to connect a Macintosh computer to a TCP/IP network and to manage the Macintosh from a console using the SNMP. The product includes the MacTCP Transport protocol; SNMP management agents for the data link, TCP/IP protocol and Macintosh hardware and software; data-link drivers; a DNR hosts file interface; and a ping test application (MPing). An administrator's kit provides comprehensive documentation and utilities for centralized configuration of the SNMP and TCP/IP software modules.

■ **Blast Professional For Macintosh**
Terminal emulation, file transfer and scripting language
Macintosh II or larger; System 7.0 or later.

Blast Professional for Macintosh is a complete serial communications product offering file transfer protocols, terminal emulators and a scripting language. Blast Professional supports Xmodem, Ymodem, Zmodem, Kermit and the Blast file transfer protocol. Using the Blast protocol, users can transfer large amounts of data quickly and with complete protection from line noise and propagation delay to more than 40 different platforms that Blast supports. Blast Professional offers a dozen terminal emulators for communications with a variety of BBBs, workstations, minicomputers and mainframes. Blast provides an extensive scripting language to automate complex communications tasks. Blast supports System 7 features like "drag and drop."

Cameo Personal Video System V.3.0
Full-color motion video desktop videoconferencing system
Macintosh IIci, IIfx, Quadra, Duo Dock or PowerPC; QuickTime; EuRoNIS Plant ISDN card; video digitizing card; analog phone; System 7.0 or later.

Now, desktop videoconferencing from a user's home or office is easier and more affordable than ever before. The Cameo Personal Video System (Cameo) is a low-cost, high-quality, point-to-point, full-color desktop videoconferencing system for the Macintosh computer. Cameo can be used on the Apple Macintosh IIci, IIfx, Quadra, Duo (when equipped with Docking Unit) and Power Macintosh running System 7. Cameo offers increased network availability, supporting Integrated Services Digital Networks (ISDN), switched 56 Kbps (SW/56) digital telephone lines and Ethernet (LAN) transmission. Increased access to a greater variety of network options brings the benefits of desktop videoconferencing to many more customers. Cameo 3.0 supports several V. Fast class modems on Macintosh AV systems and supports the ability to annotate and review documents on a remotely located computer. Shared editing, interactive whiteboard and shared workplace are included as part of the whiteboard application available with Cameo 3.0.

CD-ROM databases
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; CD-ROM drive.

Dialog OnDisc makes it easier and more efficient for users to search, display, compare and tailor output from CD-ROM databases. Version 2.0 offers the following step-saving features and enhanced output options, including: the capacity to save searches and re-execute them later on different discs; the ability to repeat the current search on a new disc, without having to re-enter terms; custom, columnar reports that can be modified, saved and reused on different discs; horizontal scrolling for complete viewing of wide reports, and of wide charts and tables in selected databases; images, currently available in the Dialog OnDisc Trademarkscan(R)-Federal database, which can be saved in a variety of formats for later viewing or use with another application; and selected Dialog Command Search options, and the ability to alternate easily between Command Search and Easy Menu Search.

Fax2PICT
Converts fax files into PICT files
Macintosh Plus or larger.

Fax2PICT is an application that will decompress any CCITT Group 3 1D, Group 3 2D or Group 4 fax file into a Macintosh PICT file. It automatically recognizes and processes fax headers from most sources; conforms to MIL-R-28002A, FIPS 150, MIL-STD-1840A and CCITT Recommendations T.4 and T.6; and can automatically convert a set of files and process both bit order reversed and byte order reversed files.

Faxcom For Macintosh
Fax server system
Macintosh Plus or larger; 1 MB of RAM; System 6.0.7 or later.

Faxcom for Macintosh is a high-performance fax server system for Macintosh networks. It combines the power of Biscom's Faxcom fax server with the efficiency and ease of use of simileFax software by SIMILE Software Co. simileFax allows documents to be created and sent directly from any Macintosh application with no more effort than it would take to print that document. In fact, Faxcom servers look like LaserWriter printers to both users and Macintosh applications. simileFax, combined with the PostScript capabilities of the Faxcom fax server, delivers true WYPIWYF (What You Print Is What You Fax). Once the fax is sent from a user's Macintosh, address information can be appended from the address book and cover page information added. Faxes can be sent immediately or scheduled for transmission at a more appropriate or convenient time. Important fax messages can be given priority in the fax queue and could be sent instantaneously. simileFax Administrator provides powerful tools for both users and the network manager to control fax jobs and the simileFax server.

FlexCom — alsUTS Uniscope Terminal Tool
Enables Macintosh computers to emulate Unisys Uniscope terminals
Macintosh Plus or larger; System 6 or 7 with CTB application.

FlexCom is a software architecture designed by Air Land Systems for Apple Macintosh users. The design is based on Apple's Communications Toolbox (CTB). FlexCom allows for standardized modular software products (Tools) to be linked together for easy configuration and operation in a user's application. FlexCom provides for an extremely flexible mode of communication, allowing users to design various applications, interconnect to one or more Host/Mainframe computers and/or transfer data. The alsUTS40 Uniscope Terminal Tool enables Macintosh computers to emulate Unisys Uniscope terminals (specifically UTS-20, 30, 40, 60 or SVT-1120 sync terminals) while maintaining Apple's user friendly interface. This feature rich emulator allows users to enter data, customize text displays, as well as transfer, save and print files. It has tear-off command and function boxes, giving users the flexibility to arrange the boxes in a style that best suits the way they work.

G4 Validator
Test tool for investigating Group 4 fax files
Macintosh Plus or larger.

G4 Validator is an advanced tool for verifying Group 4 fax files. It produces a trace listing showing how fax code words are translated into bit patterns and identifying all deviations from CCITT and MIL standards. A modern Macintosh user interface makes it very easy to use. G4 Validator tests Group 4 fax files for compliance with CCITT Recommendation T.6 and MIL-R-28002A. It includes a trace facility that creates formatted dumps of the coding of any subset of the contents of a G4 fax file. This is invaluable for investigating Group 4 files, determining their contents and trouble-shooting system integration problems.

Hayes Modem Tool
Connection tool
Macintosh Plus or larger; System 7.

Hayes Modem Tool is a connection tool for use with the Macintosh Communications Toolbox that provides easy and complete access to the advanced features of Hayes modems. Settings provided by the tool are divided into five functional areas, accessible through a scrolling list of panels. Each area controls some aspect of the modem or the connection. Written to the specifications of the Macintosh Communications Toolbox, the Hayes Modem Tool can be used without modification by any program that supports the Communications Toolbox. The Hayes Modem Tool has been designed for use with Hayes modems, allowing users to take full advantage of their modems through applications supporting the Macintosh Communications Toolbox. The five settings groups provided by the Hayes Modem Tool are: Connection Settings, Modem Settings, Port Settings, V-Series Settings and Setup Strings.

HayesConnect V3.0
Allows any Mac to operate as a non-dedicated serial server
Any Macintosh.

HayesConnect allows any Macintosh system to operate as a non-dedicated serial server, allowing users to share resources, such as modems, plotters and printers, as well as manage the use and allocation of

these resources. Version 3.0 includes enhanced server features, such as device pooling, security, activity logging and support of the Macintosh Communications Toolbox. HayesConnect uses the AppleTalk Data Stream Protocol (ADSP) to link served devices and workstations over LocalTalk and Ethernet networks with the AppleTalk network protocols.

hiBBS
Business-oriented, multiuser bulletin board system
Macintosh Plus or larger.

hiBBS (human interface BBS) is a business-oriented, multiuser bulletin board system operating directly on X.25 networks, standard asynchronous modem lines or even locally on an AppleTalk network. Features include: easy-to-use interface with icons and buttons; no syntax to remember; one-button connection process; auto-updating of BBS sections on connection; connection time always available during a session; flash messages on connection; local/connected mode for one-button archiving/browsing of sessions; and auto-connection from any point during local browsing. Macintosh, Windows and ASCII interface is available.

ImageCatcher
Allows users to display, print and save images retrieved on the Dialog online service
Macintosh 512KE or larger; System 4.2 or later, except System 7.0.

ImageCatcher is a desk accessory that works in conjunction with Macintosh telecommunications software to allow users to display, print and save images retrieved on the Dialog online information service. Currently, two Dialog databases contain images: TRADEMARKSCAN-FEDERAL, which contains trademark design images; and CHAPMAN AND HALL CHEMICAL DATABASE, which offers chemical structure images. ImageCatcher supports TIFF, PICT and MacPaint formats, which allows the transfer of Dialog images into such applications packages as PageMaker, MacPaint, MacWrite and Microsoft Word. ImageCatcher includes documentation and is supported by Dialog's Customer Services Department, which provides toll-free telephone support seven days a week.

LAN WorkPlace For Macintosh
Macintosh access to TCP/IP hosts
Macintosh Plus or larger.

Novell LAN WorkPlace enables Macintosh users to access multiple TCP/IP hosts on an Ethernet network. The components that make up LAN WorkPlace include: Telnet, which provides VT220, VT100 terminal emulation; FTP, for transferring files between hosts; Novell TCP/IP (or optionally MacTCP), the underlying transport layer; and NetStat, a desk accessory for displaying network statistics. With LAN WorkPlace, Macintosh users can seamlessly access a range of dissimilar hosts, servers and workgroups, including PCs, Unix-based workstations, VAX minicomputers and IBM mainframes. LAN WorkPlace users can also share network resources, such as printers, plotters and file servers.

LocalPath
Enables network users to connect up to eight LocalTalk devices to Ethernet and Token Ring networks
Macintosh Plus or larger; AppleTalk V.57; EtherTalk 2.3 or later; TokenTalk 2.4 or later; System 6.0.4 or later.

Farallon LocalPath software enables network users to connect up to eight LocalTalk devices to Ethernet and Token Ring networks. LocalPath features Farallon's forwarding technology, which provides several benefits over full router technology: easier configuration, lower memory requirements, lower computing overhead, lower cost and less extra network traffic initiated by routers. LocalPath enables LocalTalk devices to seamlessly connect to Ethernet or Token Ring networks by making those devices appear as if they were attached directly to the primary LAN. Other features include: easy installation with a one-button installer and restart and a control panel interface to display all connected devices.

MacEDI
Electronic data interchange management system
Macintosh Plus or larger; 2 MB of RAM.

MacEDI is an EDI (Electronic Data Interchange) management system. EDI is the computer to computer exchange of business documents, such as purchase orders and invoices in standardized formats such as ANSI X12. Benefits include: documents are delivered instantly, electronically and letter perfect; no retyping of data; and reduces labor costs and clerical errors. MacEDI includes an EDI translator that makes sure a user's transactions comply with EDI standards. It provides the capability to import and export data between MacEDI and other business applications, such as database, spreadsheet and bar-code software. Both asynchronous and bisynchronous communications are supported.

Maclan Connect For Windows
Integrates Macintosh computers into virtually any PC LAN environment
Any Macintosh; IBM PC or compatible (386 or larger); 2 MB of RAM; Windows 3.1 or later; PC interface card; AppleTalk interface card.

Maclan Connect for Windows provides a non-dedicated way to integrate Macintosh computers into virtually any PC LAN environment. The software runs, in the background, on any Windows-based PC and allows Macintosh users to transparently share files, printers and E-mail. Maclan Connect for Windows supports unlimited Macintosh users and is fully AFP 2.1 compliant. Macintosh users do not need to learn another complicated interface or add any additional software to access PC resources. All PC files and printers are accessed using the standard Macintosh "AppleShare" Chooser interface. Maclan Connect for Windows acts as a print spooler for Macintoshes. Any number of LaserWriters, or any of the PostScript printers attached to the server, can be associated with Maclan queues. Macintosh users can print a job and return to the application immediately while Maclan Connect prints the job. Maclan Connect for Windows allows Macintosh computers and PCs to share E-mail with any cross-platform E-mail package.

MacLine
Connects a Macintosh to a variety of other computers and information services
Macintosh 512K or larger.

MacLine software enables users to connect a Macintosh to a variety of other computers and information services. Users need only start the program and plug in a serial communication line. The Macintosh is ready to work in connection with another system. The MacLine Terminal Emulator allows a Macintosh to double as an interface to many popular applications implemented on other computers. The Macintosh can also be used as a part of the Connectables Network, enabling it to exchange mail with other system users, transfer files to and from other computers and access a remote printer or disk. MacLine, in combination with PCworks and UniHost software packages, provides a connection from the Macintosh to a variety of other PCs and Unix computer systems. With the MacLine/UniHost combination the Unix system acts as a network manager, enabling the Macintosh to utilize the powerful multiuser software and hardware on the Unix system. Using MacLine with either PCworks or UniHost will allow the conversion of data back and forth from Macintosh format to a format compatible with MS-DOS or Unix systems. Printers in the other system can be accessed to produce reports. Users of all three types of computers can exchange mail using the Unix system as a host. A Multiplan file may be moved from the Macintosh to a PC or a test file moved from Unix to the Macintosh for editing and graphics enhancement. The file can then be printed on the Unix system printer.

MacODA
Software translator; facilitates the interchange of documents between different applications and platforms
Macintosh with 4 MB of RAM; internal hard disk drive; System 6.0.4 or later.

MacODA is a software translator that implements the Open Document Architecture (ODA) standard. Using MacODA, users can exchange complex documents (including graphics) with users who work with different word processing applications or on different platforms, while preserving the original format of the documents. MacODA converts ODA documents to and from the Claris XTND translation system. With XTND integrated into an application, users can open documents that were created in another application as long as they have the appropriate translator installed. MacODA gives XTND-compatible applications the ability to open the ODA documents that users receive and to save documents in the ODA format. ODA is a document interchange standard established by the International Organization for Standardization (ISO). It facilitates the interchange of documents between different applications and platforms, including documents that contain complex formatting information and graphics. MacODA is independent of the transfer medium.

Meeting Space
Interactive, electronic meeting package
Macintosh with 68020 or larger processor; System 7.0 or later.

Meeting Space is an interactive, electronic meeting package specifically aimed at the existing Macintosh and Windows desktop market. Meeting Space allows users to conduct meetings in multiple locations using their networked Macintosh computers. Meeting Space communications are both immediate and direct, without the drawbacks, inconvenience and cost associated with telephone video systems or traveling to meeting places. No additional equipment is necessary. Unlike other products that provide high-end multimedia and teleconferencing requiring expensive video cameras or powerful workstations, Meeting Space runs on existing desktop and network configurations. Supported networks include AppleTalk, TCP/IP and ARA over phone lines. Meeting Space provides all the necessary tools to conduct a wide variety of meetings

These Products Available Through Bottom Line Distribution

■ MicMac
Speech recording and playback
Macintosh II or larger; System 7.0; built-in sound input or microphone.

MicMac allows users to record meetings, conversations or dictation from the microphone input for arbitrary length of time. At the same time, users may use their computer with most other programs while MicMac keeps recording. Once users have recorded, MicMac allows them to control playback from the keyboard while they type in their word processing program. It is easy to type sections of recorded speech. MicMac by itself allows browsing, marking and random access to recordings. The user can choose key combinations and sound formats. At the standard recording quality of 22 KHz, 8-bits, 6:1 compression, one minute of MicMac audio recording uses 225K of hard disk space, one hour uses 13 MB. MicMac is also good for interviews, lectures, auditions or writings.

NetMod
Network modeling tool
Macintosh Classic or larger; HyperCard; System 7.0 or later.

NetMod is an easy-to-use and affordable network modeling tool that enables users to generate complex network configurations and quantitatively evaluate alternative network architectures and traffic loads. NetMod offers powerful capabilities and can easily model advanced networks of 50,000 or more nodes in a heterogeneous environment within a company or university. NetMod can be used by network designers to evaluate the efficiency of planned configurations and by systems administrators to assess existing network capacity, compare alternate configurations and perform sensitivity analyses. NetMod comes pre-configured for LAN technologies, including Ethernet and Token Ring, and special network components, such as routers, bridges and adapter cards. Other features include: the Model Builder screen, which enables the network designer to create a network topology and display it graphically on screen; the Analyzer Screen, which analyzes the model's expected performance; and the ability to add and modify applications and the workstation machine card to create customized network architectures. NetMod is available for Macintosh and PC (DOS and OS/2) platforms.

■ Network Scheduler 3
Workgroup scheduling application
Macintosh Plus or larger; 4 MB of RAM; network connection.

Network Scheduler 3 (NS3) is a workgroup scheduling application that manages individual, group and resource scheduling in graphical formats across all popular LANs. NS3 boosts productivity by bridging communication gaps, facilitating meeting planning and eliminating telephone tag. NS3, for Windows, DOS and Macintosh platforms, supports industry standard protocols, including VIM, MAPI, MHS and X.400. NS3 links individual calendars together companywide. Searching for available times, alerting participants, providing for response and updating each calendar as needed is done automatically. Users can set the system to scan and search for an appropriate meeting time, or they can overlay individual calendars to identify available time slots. Non-calendar users can receive schedule updates via their existing E-mail system. E-mail is not required to operate NS3, but it can be configured to operate in conjunction with an organization's E-mail system.

Notify!
Wireless message center
Macintosh Plus or larger; Hayes-compatible modem; alphanumeric pager with service; System 7.

Notify! is software for System 7 that extends a Macintosh's reach right into a user's pocket. It links a user's Macintosh to a tiny, full-text pocket pager through any local or nationwide paging company. Type a message on the Mac and have it appear within seconds on any pager. By itself, Notify! supports unlimited services, pagers, user-created broadcast groups and user-definable message texts, plus complete message logging and store and recall of commonly used messages. Notify! can be used to add the power of remote messaging to other applications, too. Notify! is compatible with programs from more than 165 publishers. With calendars like Aldus Date Book, users can have unlimited appointment reminders sent throughout the day. With network monitoring programs like Local Peek or Net Watchman, users can be instantly advised of their computer network status. Users can use TFLX for complex voicemail applications, or QuicKeys, HyperCard or Frontier to integrate the entire desktop.

PacerForum
Provides online conferencing and project collaboration functionality using a bulletin board model to Macintosh and Windows clients
Macintosh Plus or larger; 1 MB of RAM (2 MB recommended); hard disk drive required for server; System 6.0.4 or later. IBM PC 386 or larger; 4 MB of RAM; Windows 3.1 or later.

PacerForum is a collaborative computing product that provides online conferencing and project collaboration to Macintosh and Windows clients on a network. It employs an icon-based graphical user interface to support the distribution of text, pictures, sounds, documents and applications. With PacerForum, group members have a powerful tool for information and document distribution, brainstorming, project planning, collaborative design, news broadcasting and other information sharing functions. Running as an application on each user's system, and as a background server process on one or more systems, PacerForum is organized into a set of bulletin boards, each containing any number of topics. Both bulletin boards and topics are user defined and are accessed by simply double-clicking on their icons. The versatile topic document, which appears when a topic is opened, is a record of user responses. Each message may include any combination of text and graphics, files or sounds.

PagerPro
Wireless messaging software
Macintosh Plus or larger; System 6.0.2 or later (single user); System 7.0 (server).

PagerPro provides users with the ability to compose and dispatch messages to an alphanumeric pocket pager from any Macintosh computer or PC using Windows. It is available as a single-user product, a server version for System 7.0 environments and a development kit for quick and easy interfacing for any third-party application wishing to support pager messaging through System 7.0 and standard Apple Events. PagerPro uses any standard modem or network modem to send messages. It is shipped with built-in scripts for most industry paging standards. Users can create and store common messages, broadcast messages to groups, or even groups within groups. Message priority ranges from urgent to setting a specific date and time for transmission. A status window gives up-to-the-minute detail on all queued messages. Optional message logging is available to archive all messages that have been sent.

Personal Maclan Connect
Provides Macintosh client support for Windows
Any Macintosh; IBM PC or compatible (386 or larger); 2 MB of RAM; Windows 3.1 or later; AppleTalk interface card.

Personal Maclan Connect provides Macintosh client support for Microsoft's Windows 3.1 operating system and brings the benefits of Macintosh System 7 personal file sharing directly to the PC desktop. Personal Maclan Connect allows for transparent cross-platform file sharing between Windows users and Macintosh users. As a background process, Personal Maclan Connect gives Windows users the ability to selectively share any local storage device with any Macintosh user. The PC's hard disks, floppy drives, CD-ROM and removable media are available to the Macintosh. The connected Macintosh computers may access any locally connected printer available to the Windows user. Personal Maclan works as a print server, directing Macintosh print jobs to shared printers like HP PaintJets, LaserWriters or HP LaserJets with a PostScript option. Macintosh users do not need to learn another complicated interface or add any additional software to access PC resources. All PC files and printers are accessed using the standard Macintosh "AppleShare" Chooser interface.

PICT2Fax
Converts PICT files into fax files
Macintosh Plus or larger.

PICT2Fax is an application that can convert any Macintosh PICT file into a CCITT Group 3 1D, Group 3 2D or Group 4 fax file. It automatically creates fax file headers, including MIL-STD 1840 headers; conforms to MIL-R-28002A, FIPS 150, MIL-STD-1840B and CCITT Recommendations T.4 and T.6; and can automatically convert a set of files and process both bit order reversed and byte order reversed files. The dimensions of the fax file created from each PICT and the color threshold for conversion to black and white can be controlled.

PixTex/EFS 3.5
Electronic filing software
Macintosh with 68020 processor or larger; 2 MB of RAM; hard disk drive; Ethernet card; DEC Pathworks for Macintosh or Apple's MacTCP; System 7.0 or later. Server requires DEC VAX (VMS), DEC RISC (Ultrix), IBM RS-6000 (AIX), HP 9000 (HPUX), SUN Sparc (Sun OS), or Sun (Solaris).

Excalibur/EFS Client for Macintosh enables personal computer users running MacOS System 7 to access the electronic filing functions of a Excalibur/EFS server on various workstation platforms. Using Digital's Pathworks for Macintosh or Apple's MacTCP, the Macintosh communicates in a client/server configuration to the host workstation via Ethernet. Excalibur/

EFS for Macintosh combines the standard Macintosh graphical user interface, a powerful fileroom metaphor and an optional database manager operating on the server workstation for electronic filing and retrieval of compound documents. Excalibur/EFS stores documents in the electronic equivalent of a physical file room. Users create file cabinets, drawers and folders to organize information just as they would in a physical file room with paper documents. The Excalibur/EFS Macintosh Client can be used to retrieve, display and print documents that are filed in the EFS fileroom.

Planet X
Client software package that delivers remote control of Macintosh computers from an X-Window workstation
Macintosh Plus or larger; 1 MB of RAM for black and white (2 MB for System 7); 2 MB of RAM for color (3 MB for System 7); System 6.0.5 or later; MacTCP (included); appropriate LocalTalk gateway or Ethernet board.

Planet X is an X Window System client for the Macintosh. It allows users to operate a Macintosh computer from any X-Windows System machine, such as a Sun, Digital, HP or IBM workstation, an X-terminal or another Macintosh running MacX. The X-Windows workstation displays exactly what is seen on the Macintosh screen. Using its own mouse and keyboard, the X window can operate a Macintosh and manipulate files within it. Users can cut and paste between two Macintosh computers or between a Macintosh and the X window. Planet X supports full color on both the Macintosh and X-Window machine.

PocketCall
Terminal emulator and communications assistant
Newton MessagePad.

PocketCall uses the power and simplicity of Newton to bring the online world to a user's fingertips. PocketCall works with the external Newton modem, as well as with any Newton-compatible PCMCIA internal modem card. It allows users to respond to queries from host systems by simply handwriting text on the MessagePad's screen, or by popping up an on-screen keypad. Incoming information from the modem can be viewed on the Newton's screen or automatically saved into a Newton file. To speed up online sessions, PocketCall provides instant touch access to multiple sets of prestored words and phrases, allowing complete interaction with online information services without the need for direct text entry. The most innovative feature of PocketCall is its ability to accept add-in modules tailored for popular E-mail, database, corporate and consumer information systems. These PocketPacks provide a Newton user with complete automated control of communications sessions, including logging on and off, retrieving news, weather, sports and financial information, accessing airline schedules and online databases, uploading and downloading electronic mail, sending and receiving from Newton's In-Box and Out-Box, visiting special interest forums and much more. By simply checking options with the MessagePad's stylus, users can arrange an entire session to be run by Newton at a single touch. Multiple PocketPacks can be used simultaneously for automated sessions that include several services.

■ **PortShare Lite**
Share fax modems and other serial devices over a network
Macintosh II or larger; System 6.0 or later; AppleTalk LAN.

PortShare lets users share fax modems and other serial devices over any AppleTalk LAN. Lite shares the built-in ports only, supports System 7 and ARA. An interrupt-driven extension controlled from within the Chooser, PortShare runs in the background, providing maximum performance. PortShare includes password protection for each shared port, arbitrates concurrent requests to the same port, indicates network activity and logs users activities for any or all shared ports. Network administrators can designate ports and peripherals available for sharing.

■ **PortShare Pro**
Share fax modems and other serial devices over a network
Macintosh II or larger; System 7.0 or later.

PortShare Pro lets users share fax modems and other serial devices over any AppleTalk LAN. It shares built-in ports and includes the ability to create virtual ports for CTB applications and the ability to redefine non-CTB compatible tools so they can be used without having to be attached to the external serial ports. PortShare Pro lets network administrators assign passwords and group names to any shared devices connected to one or more servers on a network. PortShare Pro is System 7 compatible and supports ARA.

PostIt
Enhances the ability to communicate with non-Macintosh computers
Macintosh Plus or larger; System 7.0 or later.

PostIt is a utility that will greatly enhance users' ability to communicate with non-Macintosh computers, and to integrate their Macintosh into other vendors' networks. PostIt removes the layers of complexity usually required to get text data onto a Macintosh from other computing environments. It is a system extension that monitors a particular folder on the hard drive for incoming text files. When a file is dropped into this folder (either manually dragged or deposited by any number of network or file transfer utilities), PostIt automatically reads the text from the file and publishes it using System 7's Publish and Subscribe functions. The published data is placed into a second folder, to which any application on the Macintosh can then subscribe. All activity occurs in the background without interfering with regular work.

PowerPath
Enables PowerBook users to connect to Ethernet and Token Ring local area networks
Macintosh Plus or larger; AppleTalk V.57; EtherTalk 2.3 or later; TokenTalk 2.4 or later; System 6.0.4 or later.

Farallon's PowerPath software enables PowerBook users to easily and affordably connect to Ethernet and Token Ring local area networks. Packaged with two PhoneNET StarConnector LocalTalk adapters and cabling, PowerBook users can access all Ethernet network services, including file servers, mail servers and printers. Other features include easy installation (with a one-button installer and restart) and a control panel to provide a simple method for temporarily disabling PowerPath connections. PowerPath includes forwarding technology to improve performance by minimizing memory consumption and traffic overhead on an Ethernet host Macintosh.

PowerSecretary
Speech dictation system
Macintosh with 68040 processor, Macintosh AVs and PowerPC; 16 MB of RAM; hard disk drive with 25 MB of free space; 16-bit audio board for non-AV/PPC Macintosh.

PowerSecretary is a speech dictation system for the Macintosh. The large vocabulary speech technology enables users to dictate text at 45 words per minute using a natural speech. The system provides users with a preset customizable 120,000-word dictionary Random House Dictionary. The system is speaker adaptive in that the user is not required to train each word; instead the system learns how a specific user speaks based on the various individual's phonemes. The system supports an unlimited number of users and will initially be released in US English; future releases will be in French, German and Japanese.

ProLink
Apple II and Macintosh data transfer
Macintosh Plus or larger.

ProLink is a Macintosh application designed to transfer text files between an Apple II and a Macintosh in either direction. This is accomplished without the use of any complex communications program or cabling. A user places an Apple II 3.5-inch 800K disk directly into a Macintosh internal 800K or external 800K disk drive, clicks the name of the Apple II or Macintosh file to be transferred, selects the disk or folder to be copied to and clicks the Copy button. ProLink supports ProDOS 1.1.1, ProDOS 8 (1.2) and ProDOS 16 on an Apple II and both MFS and HFS on a Macintosh. This support includes reading files from and copying files to Apple II and Macintosh folders. ProLink will only transfer text-type files (Text, ASCII, DIF and SYLK) between an Apple II and a Macintosh. The program will not transfer any other type of file including system, application/program, binary, data, document, etc.

RadioMail Remote
Two-way wireless messaging service
Macintosh PowerBook or Duo; System 7.0 or later.

RadioMail Two-Way Wireless Messaging Service provides reliable wireless message delivery for Macintosh PowerBooks or Duos. With RadioMail, information is delivered to users instantly, finding them as they travel around town or around the country. Users never have to stop and connect to a telephone line or logon. Unlike one-way paging services, RadioMail is two-way, allowing electronic messages to be sent and received, fax messages delivered and news information retrieved — in airports, taxi cabs, hotel rooms — anywhere, anytime, over the air. The RadioMail Two-Way Wireless Messaging Service supports message exchange between a PowerBook or Duo and users on the Internet, AppleLink, AT&T Mail, America Online, CompuServe, Easynet, Prodigy, MCI Mail, Sprint Mail, PSILink, UUCP, WorldLink, cc:Mail and other public mail and corporate LAN mail systems.

■ **ScanShare**
Allows users to share scanners
Macintosh II or larger; System 6.0.5 or later; Apple Scanner Interface-compatible scanner.

ScanShare enables users to share expensive scanners over any AppleTalk-compatible local area network. ScanShare works with any scanner that supports the Apple Scanner Interface and supports connections across multiple AppleTalk zones at transfer rates up to 10 MB/sec, depending on network media and traffic. With an interrupt-driven extension controlled from within the Chooser, ScanShare runs in the background and includes password protection, arbitrates concurrent requests to the same device and indicates network activity.

SoftWindows 1.0
Run Microsoft Windows applications on Power Macintosh computers
Power Macintosh; 16 MB of RAM; 250 MB hard disk drive.

These Products Available Through Bottom Line Distribution
1-800-347-1923

SoftWindows lets a Power Macintosh run Microsoft Windows and MS-DOS applications at entry-level 386 and 486 speeds. SoftWindows adds a fast, networkable PC to a Power Macintosh, so users can run any standard mode software they need. Windows 3.1, MS-DOS 6.21 and Novell NetWare support are included and ready to use. Users can run multiple Windows programs at once; print, save, copy and paste in PC software; and send E-mail or use a database over the network. Because it's designed from the ground up to take advantage of the PowerPC RISC chip, SoftWindows can run Windows software as fast as a 486SX PC. SoftWindows shares the same resources as Macintosh software; both have access to disks, the mouse, CD-ROMs, the screen and even networks.

■ **SoundMemo**
Digital dictation/playback system
Any Macintosh that is sound input capable; System 7.0 or later; hard disk drive.

SoundMemo is a digital dictation/playback system for the Macintosh. With SoundMemo, users can dictate and play back even while working within other programs. It has definable keyboard shortcuts for easy access to the program's functions. They are user definable, so there won't be a conflict with the keyboard commands in other applications. SoundMemo is voice activated and detects a user-definable amount of silence and will stop recording automatically. These periods of silence are remembered and are accessible during playback, allowing users to break up their dictation into natural segments just by adding controlled pauses while dictating.

SyncCATV
Point-to-multipoint data broadcasting over cable TV networks
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.5 or later.

SyncCATV utilizes the broadband technology of cable television networks to simultaneously deliver Macintosh data to multiple locations at speeds up to 256 Kbps (about 100 MB per hour). Both the sending Mac and the receiving Macs can be connected to LANs, giving all authorized users on the LAN access to SyncCATV. Users can set SyncCATV to transmit data at precise times, as well as select an option enabling a call-back message to the transmission site if any error in file transmission occurs.

SyncSatellite And SyncSatellite EN
Macintosh communications via satellite
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.5 or later.

SyncSatellite opens up new possibilities for communications and distribution of information — possibilities not feasible with land-based systems. It uses commercially available satellite communications to provide point to multipoint delivery of Macintosh files or folders. With SyncSatellite, data can be transferred up to 512 Kbits/sec (50 times faster than 9600 baud) to multiple locations at the same time. SyncSatellite comes with a LocalTalk interface, making it network shareable and easy to use, sending files at data rates up to 128 Kbps. SyncSatellite EN works on an EtherTalk network for speeds over 500 Kbps.

SyncSatellite AS
Macintosh data broadcasting via satellite
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.5 or later.

SyncSatellite AS simultaneously transmits files to multiple locations — without incurring any additional charges for satellite time — at speeds up to 64 Kbps. SyncSatellite AS is designed to take advantage of audio subcarrier channels available within standard satellite TV broadcasts. This enables users to take advantage of free, simultaneous data transmission. Users can set SyncSatellite AS to transmit data at precise times, as well as select an option enabling a call-back message to the transmission site if any error in file transmission occurs. Both the sending Macintosh and the receiving Macs can be connected to LANs, giving all authorized users on the LAN access to SyncSatellite AS. SyncSatellite AS is available for both LocalTalk and Ethernet.

TCPack
Connection tool that allows simultaneous TCP/IP connections
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later.

TCPack is a connection tool that allows simultaneous TCP/IP connections using Apple's MacTCP driver and the standard access interfaces of the Communications Toolbox (CTB). TCPack supports FTP server functions, running as a background task, TELNET protocol and negotiation parameters and the Domain Name Resolver (DNR) functions. TCPack FTP implementation supports: DARPA standard TELNET protocol; directory management functions (create, delete); file/directory list functions in user or application-oriented formats; send/receive file transfers (binary, ASCII or MacBinary); and simultaneous background FTP servers.

TeamLinks Office For Macintosh
Integrated set of desktop applications and networked-based services to access enterprise information and resources
Macintosh Plus or larger; 4 MB of RAM; 40 MB hard disk drive; 3.5-inch SD disk drive; System 7.1 or later.

TeamLinks Office for Macintosh offers an integrated set of desktop applications and network-based services to Macintosh users who wish to access enterprise information and resources. It delivers client/server technology to office workers whose desktops often will be connected to their corporate wide area network. TeamLinks uses Digital's groupware-oriented applications for enhancing team computing. These applications provide electronic mail, document routing (i.e., workflow), scheduling and conferencing. TeamLinks Mail for Macintosh allows Macintosh users to exchange messages and attached files with other PC, video terminal, Macintosh and workstation users across an enterprise-wide network. TeamLinks Routing for Macintosh addresses the need of routing forms and information to predetermined destinations within an organization and collecting approvals from various individuals within the organization. TeamLinks Scheduling allows the user to schedule meetings and resources as well as maintain a personal calendar of events and a to-do list. Conferencing for Macintosh permits Macintosh clients to access the DEC Notes server computer conferencing software designed to provide users with the capability of creating and accessing enterprise-wide, online conferences or meetings.

TeamLinks Routing For Macintosh
Routes forms and information to predetermined destinations and collects approvals
Macintosh Plus or larger; 1 MB of RAM; 40 MB hard disk drive; 3.5-inch SD disk drive; System 7.1 or later.

TeamLinks Routing for Macintosh addresses the need of routing forms and information to predetermined destinations within an organization and collecting approvals from various individuals within the organization. This routing facility allows users to design package routing templates, automating many business workflow processes. TeamLinks Routing for Macintosh can transfer documents, files and/or forms to one or more individuals and give them the opportunity to review all of the elements directed at them, as well as electronically "sign" the packet of information before passing it on to the next recipient. Because the routing of information is controlled electronically, TeamLinks Routing offers the added benefit of tracking. The initiator and any other authorized recipient can easily determine where the packaged of information is in the approval cycle.

Timbuktu Pro
Remote control and file transfer for networks
Macintosh Plus or larger; 1 MB of RAM; System 6.0.5 or later.

Farallon's Timbuktu Pro for Macintosh is remote control and file transfer for networks — the cross-platform workgroup solution that lets Macintosh and Windows PC users work together seamlessly. Users can easily control remote Macs and PCs, share screens and exchange files across AppleTalk or TCP/IP networks, including the Internet; and share screens in full 24-bit color with multiple Timbuktu Pro and Timbuktu for Windows users to work together on projects, provide training, troubleshoot problems for remote users, even give a presentation, all without leaving their desk. Files can be transferred quickly between Macs and PCs with a click of the mouse or with the simple "drag-and-drop" Timbuktu Sender icon; there's no need to find and mount a file server volume. System 7 users can send files to multiple AppleTalk-based and TCP/IP-based users in one step. The Timbuktu Pro Administrator's Toolkit, an optional accessory, features powerful site administration capabilities for easy management of Timbuktu across a LAN.

Timbuktu/Remote 3.0
Allows remote operation of Macintoshes over modem links, ISDN links, Digital PBX data lines, etc.
Macintosh Plus or larger.

Timbuktu/Remote is a long-distance version of Farallon's Timbuktu screen-sharing application for Macintosh computers. Just as Timbuktu allows Mac users to view and operate each others' computers over a network, Timbuktu/Remote allows the same activities over modem links, ISDN links, Digital PBX data lines, serial cables and other links at rates up to 57,600 bps.

Timbuktu/Remote also includes a file transfer utility. Users must have Timbuktu/Remote at each end of the communications link. A 9,600-baud modem is recommended for maximum performance. Timbuktu/Remote 3.0 supports full-color screen sharing and is useful for telecommunicating, remote training and user support and remote collaboration on documents and graphics.

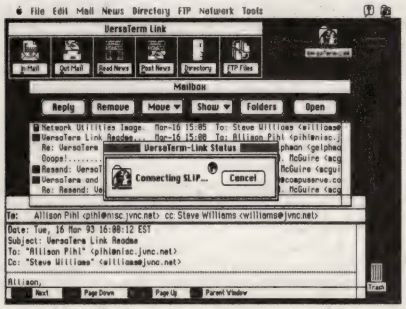
VersaTilities 1.1
Networking utilities
Macintosh Plus or larger; LocalTalk, Ethernet or serial connection.



VersaTilities is a suite of essential network connections with special emphasis on solutions for TCP/IP environments. VersaTerm-Link, the cornerstone application, provides a smoothly integrated graphical interface for accessing mail, news, directory, Telnet terminal and file transfer functions. The TCP/IP client suite focuses on exchanging data with the exploding Internet community over Ethernet, AppleTalk and serial (SLIP) connections. The following protocols are used: Mail (SMTP and POP3), News (Network News Terminal Protocol [NNTP]) and the File Transfer Protocol (FTP) is used to move files across a TCP/IP network (or Internet). The Telnet Protocol is used for limited remote logins and is not intended as a replacement for a full-fledged terminal program, like VersaTerm-Pro or VersaTerm. Now it is possible for any Macintosh user, anywhere, to have Internet access at their desktop. This is accomplished using a modem or a direct serial connection into an appropriate Serial Line IP (SLIP) server and the software provided with VersaTilities. VersaTilities, running on a PowerBook, provides a comprehensive solution for remotely accessing the Internet and carrying on a users' important communication functions from any location at any time.

WaterMark Voice Mail
Automatic voice messaging system
Macintosh Plus or larger; System 7.0 or later; modem with voice capability.

WaterMark Voice Mail turns a Macintosh computer into a complete voice mail and message processing center. Callers may leave recorded messages and, when using a touch-tone telephone, follow easy-to-understand verbal prompts to enter a return telephone number and best time for a call back. Users may access and listen to recorded messages directly from the Macintosh by double-clicking on the message icon, or remotely by using a touch-tone phone. After listening to a message, users can record a response on the phone that the Macintosh will automatically send back to the caller's number at any user-designated time. High Tide's Insta-Return feature is ideal for personal use or sales-driven answering services that need to streamline customer or client support. Additional features include a Calling Log that records all incoming and outgoing calls, a time-entry system for scheduling callbacks, a hold feature to enable personal contact during outgoing calls and support for non-touch-tone telephone users, automatic retry on busy lines and the ability to select and save, archive or discard message files. The Pro version of WaterMark Voice Mail provides new features, including multiple mailboxes, multiple outgoing messages, nested menus, fully customizable, password security, on-screen message manager, full fax support, callers can leave multiple messages on one call and more.

XPort
Turns the Macintosh into an X Window System Client
Macintosh Plus or larger; 2 MB of RAM; System 5.0 or later.

XPort allows Macintosh applications to be run from any workstation or X terminal. An XPort sessions begins with a user logging onto the Macintosh from the X server via Telnet. The Macintosh desktop is displayed on the X server in a standard X window, and control of the Macintosh is transferred to the X server. MacTCP is required, and allows the XPort Macintosh to communicate with any X server that uses TCP/IP as the network protocol. Both Ethernet and AppleTalk networks are supported via MacTCP. XPort features include: full remote operation of the Macintosh for all applications; user ID and password logon protection; the ability to cut and paste text between X applications and Macintosh applications; compatibility with all releases of the X Windows System software; and compatibility with all of the common window managers (Open Windows, DEC Windows, OSF/MOTIF, etc.).

Desktop Presentations

1stVue
Form completion and multiuser database
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.

1stVue II provides the tools required for users to set up applications via forms and files. 1stVue is a form completion and multiuser database that includes a unique graphic forms interface with multimedia capability. It is designed for use with 1stBase-II, a relational database and report generator. By using 1stVue II with optional DataModeler and 1stBBS-II, users can create a form with 1stVue II and send it to customers with 1stBBS-II. Customers then fill out the form with DataModeler and send it back with the files attached using 1stBBS-II. Clairvoyant Posting gives users the ability to simply open the form with 1stVue and customers' data is automatically added to the database. Customers view their orders with 1stBBS-II's database lookup feature. 1stVue II features patented Fuzzy Find over weighted fields and MacroAccess Command icon system automation. 1stVue II supports 12 different kinds of data filters, including documents, sounds, pictures and QuickTime movies. The 1stVue II database is automatically generated based on the form's attributes. 1stVue II's numerous display and entry filters provide users with an efficient way of entering and displaying all of their business information. It is System 7 compatible.

Aldus Persuasion 3.0
Desktop presentations
Macintosh Color Classic or larger; 4 MB of RAM; hard disk drive.

Aldus Persuasion provides a complete set of tools to produce 35mm slides and overhead presentations. It includes tools for outlining, word processing, drawing, charting and formatting and can produce output for black and white or color presentations, a well as speaker notes and audience handouts. Persuasion streamlines the entire presentation-making process. Presenters simply choose a design — either one of the predesigned slide or overhead templates that come with the product, or one of their own creation — type their ideas into an outline, and Persuasion automatically creates each element of the presentation.

Aldus Corp.; 411 First Ave. S, Ste. 200; Seattle, WA 98104; 206-622-5500, 800-685-6636 or 206-343-4248 (fax)

Astound
Combines professional slides and handouts with animation, sound and QuickTime
Macintosh Plus or larger (Macintosh with 68020 CPU or faster recommended); 2 MB of RAM (4 MB recommended); hard disk drive; System 6.0.8 or later (System 7 recommended).

Astound blends the best of static presentation products with the power of multimedia. Using the familiar slide and outline approach, Astound is a snap for users of existing presentation products. PowerPoint or Persuasion files import as live, editable documents. Advanced capabilities for slides, overheads, notes and handouts include multicolor gradients, drag and drop libraries, character/line spacing and more. Charting is built in, with dozens of chart types, including pictographs. For multimedia presentations, just a few mouse clicks provide exciting text animations, moving characters, QuickTime movies, sound effects, music and even voice-overs, creating dazzling productions previously possible only with complicated authoring tools. Charts can tumble into place, assembling before a user's eyes. Astound requires no programming or scripting; all effects are accessed through menus and push buttons. Interactivity can be added to any object or slide. Playback features include runtime players for Macintosh and Windows, and on-screen notation pens and highlighters.

Audioshop
Digital audio editor and CD-ROM controller
Macintosh with 68030 or larger processor; 4 MB of RAM; hard disk drive; Sound Manager 3.0; QuickTime 1.6; System 7.0 or later; CD-ROM drive is optional.

Audioshop is a digital audio editor and CD-ROM controller for the Macintosh. With its unique "CD-Player" interface, Audioshop sequences, record and plays both Macintosh sampled sounds and compact audio tracks direct from disk, allowing file sizes limited only by hard disk space. With Apple's Sound Manager 3.0, it gives 16-bit, CD-quality audio on AV Macintoshes. It is also compatible with NuBus cards that emulate the AVs. Audioshop is the only Macintosh product in which CD-ROM audio and digital audio are integrated into the same playlist. Using a QuickTime

These Products Available Through Bottom Line Distribution
1-800-347-1923

compatible CD-ROM drive, Audioshop allows conversion of standard CD-audio tracks to Macintosh audio. Editing a digital audio track displays the track's waveform, which can be cut and pasted like text in a word processor. Special effect tools can modify any part of the wave form. New tracks are created with the built-in Mac microphones or with other input devices like MacRecorder. Audioshop can load and save digital audio tracks in a variety of popular formats. Audioshop is Power Macintosh and AV compatible.

Avid VideoShop 2.0
Digital video editing
Color Macintosh; 4 MB of RAM; 40 MB of free hard disk space; 24-bit monitor recommended; QuickTime-compatible digitizer; System 7.0 or later.

VideoShop is a leading QuickTime editor for business communicators, educators and graphic artists who wish to create digital movies and videotapes on Macintosh computers. VideoShop is a powerful story-boarding and concept development tool to complement professional editing equipment, such as Avid's Media Composer line of digital nonlinear editing systems. Version 2.0 includes new features, such as more than 200 special effects, layering and compositing capabilities, alpha channel support, anti-aliased titling, CD-quality audio, audio mixing and support for third-party full-screen video compression boards. Users can edit with the same cut, copy and paste commands used in word processors and provides a fully non-destructive and powerful editing model, giving users accuracy to the single frame. VideoShop automatically recognizes and converts PICT, PICS, Photo CD, AIFF, TEXT files and Audio CD files into QuickTime format.

CA-Cricket Presents III
Presentation graphics
Macintosh Plus or larger; 2.5 MB of RAM; hard disk drive; System 6.0.7 or later.

CA-Cricket Presents III is an integrated presentation-media program that provides all of the tools needed to create and deliver professional presentations. Presentations can include frames, speaker's notes, audience handouts and display-quality graphics, as well as sound and QuickTime movies. CA-Cricket Presents III builds on a familiar frame-based metaphor. The program has a complete palette of tools to create graphic objects, text, graphs and tables. A comprehensive spelling checker and thesaurus round out the program's advanced text handling capabilities. Import options include PICT, EPSF, MacPaint, Scrapbook and data for graphs and tables in ASCII and SYLK formats. Export options include PICT and Scrapbook formats. Users can import time-based data, such as QuickTime movies and sound files to add exciting multimedia elements to presentations. Users can import QuickTime movies across frames for editing and annotating, then export edited presentations as QuickTime files or self-running movies.

CameraMan 2.0
Screen movie capture utility
Macintosh II or larger; 2 MB of RAM (4 MB recommended); System 7.0 or later; QuickTime requires QuickTime 1.5 or later (included); 32-bit QuickDraw 1.2 or later (built into System 7).

CameraMan is a screen movie capture utility that records everything taking place on the screen into a standard movie file, in real time. Uses can play this movie back using CameraMan's Movie Play (included) or inside their favorite multimedia software. CameraMan supports the standard Macintosh animation formats, QuickTime and PICS. The screen movies can be used in any multimedia or presentation package, as well as a growing number of products, such as word processors, that support the playback of QuickTime movies. CameraMan can also be used as a regular PICT screen capture utility. Key features of CameraMan include high-speed recording so that animations play back smoothly; live voice-annotation; real time voice-overs; titling, which allows other movies or PICT files to be inserted into QuickTime movies for dynamic titles; audio clip sequencing, which allows accurate graphical positioning of multiple soundtracks with respect to the QuickTime movie; and save options, allowing movies to be saved on a user-specified disk volume.

ColorUp
Add dazzling, compelling color to presentations and reports
Macintosh LC or larger; 2 MB of RAM; hard disk drive (2 MB for Palette Chooser, 10 MB for Explorer);13-inch or larger color monitor with 256 color capability; System 6.0 or later.

ColorUp is a software utility that can improve the color quality of presentation visuals and handouts. Users choose from a library of hundreds of predesigned, professionally-coordinated color schemes. It's like having the color expertise of the most accomplished graphic designers right at a user's fingertips. Users customize color schemes and even select colors from the PANTONE MATCHING SYSTEM. The color schemes can be exported directly into a variety of popular business graphic and presentation software packages. In addition, ColorUp includes an interactive encyclopedia of color. It is now easy to learn about the science of color, color harmony, color reproduction and how to effectively use color in business presentations.

DeltaGraph Pro 3.5
Charting and graphing program
Macintosh with 68020 or 68030 processor; 3 MB of RAM; hard disk drive; System 6.0.2 or later.

DeltaGraph Pro 3.5 is the newest version of DeltaPoint's charting and graphing program. It features more than 60 distinct business, scientific and technical charts and graphs, including pictographs, histograms, open/high/low/close, xyz contour, bubble, ternary, spider, polar, timeline and scatter plots. With the extensive formatting options available — including curve fitting, error bars, 360 degree 3-D chart rotation, depth and more — hundreds of chart styles are possible. DeltaGraph is also an effective document and presentation management system, providing smart page layouts, an outliner and new multiview design. DeltaGraph also includes AppleScript support, a chart advisor system, custom colors, Pantone ColorUP support, a new command bar with navigation buttons to common user activities and multiple document support, libraries of clip art, preformatted chart templates, predesigned backgrounds and page layouts. DeltaGraph Pro has extensive import, export and data linking capabilities. Version 3.5 adds six quality control charts, network licensing support, interactive help and support for several new Macintosh technologies, such as inter-application drag and drop and Apple Mail.

Fast Pitch Pro
Converts any HyperCard stack into a presentation slide show
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; HyperCard 2.1, 2.2 or Player; System 6.0.5 or later.

Fast Pitch Pro is a HyperCard utility for converting any HyperCard stack into a presentation slide show. No scripting is needed. It is a very inexpensive productivity tool for education and business users to make quick daily presentations or courseware that can include multimedia elements. Fast Pitch presentation slide shows can include visual effects, text, sound, color pictures and QuickTime movies. When running a show, the presenter has complete mouse click control to jump back or ahead or to stop the show. Selected slides can be printed on overhead transparencies, as audience handouts or with presenter notes. A run-time option allows completed presentations to be distributed freely. The Pro Videodisc and AudioCD Plug-Ins are separate products that integrate videodisc and audio CD media with Fast Pitch presentations. Users simply copy the plug-ins to Pro's folder.

FreePan 1.1
FreeHand utility extension; allows users to quickly load multiple numbers of Pantone process or spot colors with a single pass
Macintosh Plus or larger (Macintosh LC II or larger recommended); 4 MB of RAM recommended; hard disk drive; Aldus FreeHand 3.0 or later; System 6.0 or later.

FreePan is designed for use by graphic artists, advertising agencies, production houses, printers or anyone using or incorporating Aldus FreeHand-produced work within their job. FreePan is a necessity for any user of FreeHand and its Pantone Color Library. FreePan allows users to quickly load from several color matching system libraries. These libraries currently include Pantone, Trumatch, Toyo, Focaltone and Color Curve. FreePan allows loading a multiple number of Pantone process or spot colors in a single pass. In two passes, the entire library of Pantone process colors and Pantone spot colors can be loaded, allowing two of the same named colors (one spot and one process) to be loaded — an impossibility for FreeHand. This allows productivity to increase upwards to more than several hundred percent based on the time to load the colors versus the production of the job. Anyone loading more than one Pantone color or needs access to other color matching libraries will immediately see why they need FreePan.
$49.99 retail; FreePan with Pantone

GEOvista
Geographic presentation system
Macintosh Plus or larger; System 5.0 or later.

GEOvista is a geographic presentation system that displays data on high-quality maps. Information can be imported from applications, such as databases and spreadsheets, or entered directly from the keyboard. Areas of the map are shaded to represent data ranges selected by a user. The map can be transferred to draw and paint applications to take advantage of special effects. The product is designed to allow corporate users to conveniently prepare high-quality presentation graphics for slides, overheads or illustrations. It is an ideal tool to concisely summarize and portray corporate information. Included with GEOvista are 52 high-quality template maps, one for each of the 50 states subdivided by county and two maps of the U.S. subdivided by state. World maps are available for an additional cost.

Graphics Express
Provides an interface from Macintosh applications to remote slide services
Macintosh 512KE or larger.

Graphics Express is a presentation program that provides an easy-to-use interface from Macintosh applications to remote slide services. Packaged as a Chooser-level driver, it allows a user to order slides, color hard copy and other products, as easily as printing to a local printer. Graphics Express operates with most presentation and drawing applications. Graphics Express is fully-integrated system software, operating completely from the application during printing. It is not necessary to save a presentation in a special format and execute a separate file transfer program.

ImageBoss Creation Software
Allows the creation and editing of ImageBoss Presentation Software stack and presentation files
Macintosh II, Performa, LC, PowerBook or Quadra; 8 MB of RAM; hard disk drive.

ImageBoss Creation Software is a peripheral product to the ImageBoss Presentation Software that allows the creation and editing of ImageBoss stack and presentation files on any Macintosh II family of computers. The look and feel is identical to the ImageBoss Presentation Software, but the Creation Software does not have display ability. Its intended use is to expand presentation production capability for customers. A standard Macintosh interface makes the creation and arrangement of presentations fast and easy. The stack editor, a graphic representation of the stack, allows users to click and drag slides to the desired display order. The attribute editor gives users several choices of display characteristics for individual slides. The archive utility lets users save entire presentations as one file for easy transfer to the ImageBoss workstation.

InfoLynx
For authoring button-activated, interactive desktop presentations and courseware, as well as automatic slide shows
Macintosh 512KE or larger; 2 MB of RAM for color.

InfoLynx provides for fast and easy building of interactive presentations. There is no scripting or programming. Like desktop publishing, elements are positioned on pages as screens. Point-and-click ease of use allows authors to quickly combine graphics, scanned photos, text and sound resources into button-activated product and service presentations or courseware. Linking buttons and pages is fast and easy via a spreadsheet-style page/link list. InfoLynx generates interactive presentation files with full-screen, brilliant color (8 or 24 bit) or black and white displays that are automatically saved as stand-alone, self-launching files and may be freely distributed, allowing any Macintosh user to display them without needing to own the InfoLynx application.

Information Rainbow
Tool to create multimedia touch-screen information systems
Macintosh with 68030 or larger processor; 6 MB of RAM; 10 MB of free hard disk space; System 7.1 or later.

Information Rainbow is a software tool that allows anyone to create multimedia touch-screen information systems without the time and expense of computer programming. By placing pictures, music, voice, video clips and documents into a series of folders on the computer's disk, an information system can be created overnight. This material may be created and modified using application programs familiar to corporate marketing departments, graphic studios, exhibit companies and advertising agencies. New content may be inserted at any time, even over telephone lines, ensuring that the information dispensed is as current as it needs to be. Information Rainbow systems can be utilized for a variety of applications within many businesses. The computer, touch-screen color monitor and laser printer are typically housed in a kiosk enclosure designed to complement the surrounding decor. A telephone handset is mounted on the outside of the kiosk to support Information Rainbow's telephone dialing capabilities. Because custom computer programming is not required, Information Rainbow systems are surprisingly affordable. Built-in advertising and sponsor recognition capabilities allow low monthly lease payments to be offset with a minimum of effort.

Interactive Multimedia — Getting Started
Hands-on guide to creating interactive multimedia
Macintosh LC or larger; 4 MB of RAM; System 7.0 or later; CD-ROM drive.

Interactive Multimedia — Getting Started is a CD-ROM hands-on guide to creating interactive multimedia. If users have ever wanted to try their hand at creating their own multimedia project, this CD is for them. It comes complete with a working tryout version of Special Delivery, interactive tutorials, examples of successful multimedia projects and loads of clipmedia, including photos, backgrounds, movies and music. Also included are tryouts and demos of the most popular tools for multimedia database management, image editing, 3-D rendering, painting, screen capture, video editing and video special effects. There is no need for scripting or programming — novices and professionals alike can experiment with the power of interactive multimedia for presentations, training education and kiosks. The tryout version of Special Delivery actually lets users create and save multiple projects limited to three slides per project.

Interactive Video Design Toolkit
Allows users to create, design and organize multimedia programs
Macintosh Classic or larger; 1 MB of RAM; hard disk drive.

Interactive Video Design (IVD) Toolkit is a unique product that helps free users' creativity and automate the design process by linking flowcharts to program data. IVD Toolkit takes full advantage of the Macintosh computer's high-quality graphics, simple user interface and powerful software base. Yet IVD Toolkit lets users design for any hardware delivery system and any authoring system. Built upon Filevision, IVD Toolkit includes a series of tested templates for flowchart design, storyboard formats and reports. The templates and forms have been developed and tested on actual interactive video projects and should serve most design needs. However, all templates can be fully modified and new ones easily created. Unlike database or text-based programs, IVD Toolkit creates an actual link between a user's flowchart and script or storyboard. By clicking on any flowchart element, users can immediately be working on its storyboard page. Users can even create an interactive storyboard that allows branching between storyboard sketches. IVD Toolkit can be used for designing any type of multimedia program, from complex training systems to consumer information displays.

LiteTools
Presentation management software
Macintosh LC or larger; 4 MB of RAM; hard disk drive; System 6.0 or later.

LiteTools presentation management software allows users to create, edit and preview high-impact presentations entirely on a Macintosh. Users can enhance presentations with LiteTools' image capturing, organizing, editing, timing, special effects and preview functions. Developing presentations is fast and easy with LiteTools' complete mouse, keyboard and printer support. Users can even create a library of LiteShow presentations and incorporate images from past shows into new ones. Once a presentation is complete, users can present their images at a full 640 by 480 resolution, with up to 256 displayable colors, on a LiteShow II presentation management system or LitePro LS self-contained color LCD projection system.

MacPresents — Multimedia Database Manager 1.0
Multimedia database management software
Macintosh SE or larger; 5 MB of RAM for color; System 6.0.5 or later.

MacPresents — Multimedia Database Manager (MDM) helps users manage databases containing PICT files and Macromedia Director and QuickTime movies. Designed as a companion piece to MacPresents — Multimedia Presentation Manager (MPM), the MDM allows users to locate, preview and automatically export PICT files and movies to pull-down menus in the MPM. Users can search for files hierarchically, alphabetically based on file names and relationally based on user-defined key words. Information stored with each file includes file size, color depth, PICT dimensions, description, source and a memo field for notes. The product is System 7 compatible.

MacPresents — Multimedia Presentation Manager 1.1
Multimedia presentation software
Macintosh SE or larger; 5 MB of RAM for color; System 6.0.5 or later.

MacPresents — Multimedia Presentation Manager (MPM) gives users the ability to organize and control the presentation of text, graphics, videodisc images and Macromedia Director and QuickTime movies contained in up to six pull-down menus. Sequences of items in these menus can be assembled using the script editor and then stored as separate presentations in a "script" menu. Keyboard arrows and directional arrows at the bottom of the screen allow easy navigation through a script. Any item in a menu or script is immediately accessible. The program has built-in text and paint tools for customizing text, and a videodisc editor and controller. Multiple thumbnail representations of PICT files can be stored in RAM for quick recall to screen. Macintosh PowerBook and System 7 compatible, the product is licensed for use on two computers.

Media Suite Pro
Desktop video production system that generates professional presentations
Macintosh IIfx, Quadra 900/950; multisync color monitor.

Media Suite Pro, a video production system, places on the desktop the ability to create, edit, view and record high-quality digital video. Multimedia projects can include any combination of video, graphics, animation, titles, scanned images, electronic photos, music and other sound effects, which can be recorded, edited and played as full-screen, full-motion, TV-quality video on a Macintosh hard disk. Media Suite Pro works with ordinary camcorders and VCRs. Titles can be added with a built-in title generator. A single video presentation can be output in any of three formats: viewed immediately on the computer under interactive control; recorded directly from the computer onto videotape in real time; or distributed as a QuickTime movie. The comprehensive packages includes the Media Suite Pro software; video, JPEG compression and audio boards; a SCSI-2 disk controller and stereo amplified speakers with CD-quality sound. Media Suite Pro is now available with Avid Technology's optional EDLs and optional 2-field resolution.

MediaMaker 1.5
Desktop video publishing package
Macintosh Classic or larger (Macintosh II recommended); 2 MB of RAM (4 MB for color); hard disk drive; System 6.0.7 or later.

MediaMaker allows users to easily integrate video with graphics, animation, text and sound to publish videotapes and create video presentations. To support both video presentations and video publishing, Macromedia utilizes two types of multimedia documents, Collections and Sequences. Collections are media databases that allow users to add, organize and edit elements of video tape, videodisc, compact disc audio, Macintosh audio, graphics and animations. Users play back the media by simply double-clicking on any "picon" (picture icon; a visual cue of the media's content). This interactive playback of media is ideal for live presentations. Users can drag the media elements from the Collection window into the Sequence window. Sequences provide a simple system for laying out and synchronizing the media elements over time. MediaMaker Sequences can be easily output to videotape using MediaMaker's powerful "Print to Tape" feature. It supports Apple QuickTime and Sony VISCA interface.

Microsoft PowerPoint 4.0
Presentation software; includes Genigraphics Driver and GraphicsLink program for preparing and transmitting PowerPoint data files to Genigraphics Service Centers
Macintosh Plus with 68020 or larger microprocessor; 8 MB of RAM recommended; System 7 or later (System 7.1 for Power Macintosh); hard disk drive.

Microsoft PowerPoint advances the presentation graphics category by delivering new features and enhancements that focus on the entire process of creating presentations, with the goal of making users more effective presenters. It offers a high level of consistency and synergy with other Microsoft applications, further enhancing ease of use and learning. The AutoContent Wizard provides users with suggested presentation content and structure to organize six of the most commonly used presentation topics along with a general content outline. Rehearsal will make users more effective — they can practice their presentation for time allotted. Hidden Slides, Drill Down and Branching make sure that users are prepared with the backup materials they need to answer the questions that may be asked. PowerPoint offers AutoLayout, 100 consistent tasks with Word and Excel, Pick-a-Look Wizard, Quick Preview, CueCards, ToolTips, customizable Toolbars, shared components, prompt text, status bar, right mouse button support, context-sensitive help, Tip-of-the-Day, AutoShapes, most recently used files, most recently used fonts and most recently used colors.

MindMap
Interactive multimedia presentation system
Macintosh Plus or larger; 1 MB of RAM; HyperCard 2.0 or later.

MindMap is an interactive multimedia presentation system that allows users to create convincing presentations for customers, investors and employees quickly and easily. Non-programmers can use MindMap's point-and-click tools to brainstorm ideas, and then link those ideas into original presentations. Users can express ideas in any combination of words, pictures, sounds, still and motion video. With a laserdisc player connected, MindMap allows users to capture still or motion video from videodiscs. Users can capture sounds from videodiscs or from CDs with a CD-ROM drive attached. Users can mix video from a laserdisc and sounds from a CD on the same screen. MindMap is System 7 compatible.

MovieWorks
Allows users to create interactive multimedia projects and QuickTime movies
Macintosh LC, II, Centris, Performa or Quadra family; 8 MB of RAM; 10 MB hard disk drive space; 8-bit color monitor; QuickTime; System 7 or later.

MovieWorks is five programs in one (Text, Sound, Composer and Player) and provides users with everything needed to create interactive multimedia projects, presentations, training, entertainment and QuickTime movies. First, create and edit objects in MovieWorks Text, Sound, or Paint (other editors may be used). Second, set up project's "look and feel" using MovieWorks high quality interface pieces (backgrounds, frames circles and buttons). Third, use Composer to integrate the objects into a scene, add animation and special effects, then link scenes together either sequentially or interactively through the use of buttons, to create a project. Create a run-time version and distribute with Player.

On The Air
Animated presentation software
Macintosh II family and Power Macintosh compatible.

On The Air is low-cost, easy-to-learn and use presentation/animation software designed for users who need attention-grabbing presentations quickly. It can be used to create, edit, rearrange and play back stills, sounds and path-based animations. There are no tedious, repetitive frame-by-frame controls to learn; On The Air uses simple slider bars calibrated in percentages. On The Air is also a powerful playback engine for presentations created in other Macintosh environments. Users can playback on the desktop or output to a large-screen projector. Optional multiscreen presentation control is transparent to an audience as users pause, screen blackout, rearrange scenes on the fly or find/repeat scenes in any order. On The Air is System 7 compatible. On The Road, a companion product included with On The Air, is a playback engine designed to play back presentations created with On The Air. Because On The Road is less than 90K in size, it can be placed on a floppy with the presentation file and mailed or sent electronically to another user. This party can then play back the presentation in its entirety, complete with animation sequences and sounds. On The Road may be distributed to anyone free of charge. Version 1.1 includes QuickTime support.

Passport Producer Pro
Real-time production for interactive media
Macintosh Centris or Quadra; 12 MB of RAM; hard disk drive; System 7.0 or later.

Passport Producer Pro is the ideal authoring software for creating public access kiosks, computer-based training, special event presentations and video and CD-ROM productions. Producer Pro's real-time development environment gives producers instant feedback during the production process, making it easy to try various what if scenarios. Passport Producer Pro is a time-based production tool that combines and synchronizes animation, video, audio, music and presentation graphics. It offers multimedia producers interactivity, path-based object animation, external device control, video support and graphics and text capabilities.

Supported file types include PICT, TIFF, QuickTime, PICS, AIFF and MIDI.

Persuasion 2.1 Japanese
Japanese version of Persuasion
Macintosh Classic or larger; 4 MB of RAM; Japanese Language Kit with System 7.1 or KanjiTalk 6.0.7 or later.

This Japanese version of the popular presentation software supports all the features of the equivalent English version, plus it gives users the ability to use Japanese text in presentations. When used in combination with a Japanese font utility or a Japanese PostScript print device, Persuasion Japanese produces high-quality kanji output in overhead transparencies and slides. It comes with Japanese documentation.

Philmont Symposium System
Interactive multimedia presentation software
Macintosh Plus or larger; 2 MB of RAM; System 7.0 or later.

Philmont Symposium System lets users put their own files together to form interactive multimedia presentations. Combining QuickTime movies, text and PICT files (including Photo CD discs), users can create training programs, interactive kiosks, educational course materials and tests, personal travelogues, scrapbooks and publications for CD-ROM, etc. Philmont Symposium System can be used to create and edit text and PICT file for use in a Symposium; in addition, native Symposium Shapes files can be created which combine graphics, text, pictures and "hot shapes" for use with a Symposium. Not a passive slide show or presentation program, the System provides extensive user involvement with content. The System now includes Apple's PlainTalk text-to-speech technology. The Controller and navigational tools for Symposium users are automatically assembled by the System — no programming is required either to develop or use Symposia. At the same time, the wide range of options available allows the creation of large Symposia with a common interface but with many custom features for each Symposium. Philmont Symposium System consists of two applications: Symposium Creator and Symposium Explorer.

■ The Presenter's Edge
Build business and educational presentations
Macintosh II or larger; 4 MB of RAM; System 7.0 or later.

The Presenter's Edge lets users build personalized business or educational presentations at an affordable price. The Presenter's Edge design is image oriented, using images from Photo CD, other graphics and paint programs or clip art, with the added impact of CD-quality sound or voice-over. The image intuitive "slide sorter/light table" makes timing easy — no time lines or frame counts to worry about. Users can import Photo CD, PICT and TIFF images and QuickTime movies. Users can overlay text, captions or bullets and mix with audio CD sound, Mac sound or voice-over using the four-channel sound mixer. Each presentation is created with its own self-running "Watch me" file, which can be viewed on other Macintosh computers or can be output to video and 35mm formats.
$74.95 retail

PresenterPad
Portable teleprompter and slide management
Newton MessagePad.

PresenterPad is a portable teleprompter and slide management application designed for Apple's Newton MessagePad. PresenterPad allows users to teleprompt a pre-scripted speech, customizing the pace to suit a particular style. For slide presentations, PresenterPad helps keep track of key points for each slide, and with the Newton infrared beam, controls slide presentation equipment as well. For both speeches and slide shows, PresenterPad gives a set of timers that display current information on the timing and pace of a presentation delivery. PresenterPad keeps all presentation information at a user's fingertips for the smoothest, most organized delivery possible.

Slide Show & Portfolio Viewer on Diskette
Inexpensive diskette-based slide show and photographic portfolio still image viewer
Any color Macintosh.

Slide Show & Portfolio Viewer places up to 36 customer-supplied photographs (color or black and white) onto a standard floppy diskette with the necessary license-free software to view the images as stills or a slide show on either a Macintosh or PC with Windows. Anyone with the need to duplicate actual photographs or costly photo CDs now has an inexpensive marketing tool. Photographers can send their portfolio on a single diskette to editors and real estate agents can circulate and catalog vivid color images for potential buyers. The uses for this unique photo viewing tool are unlimited.
$ .50 retail; per original scanned photograph
$1 retail; per duplicated diskette

Slides & Sound
Create high-tech slide shows
Color Macintosh; 4 MB of RAM; System 7.0 or later; CD-ROM drive.

Slides & Sound is a simple approach to multimedia at an affordable price. With Slides & Sound, users can import pictures from one or more PhotoCDs, arrange in any order, add titles, special effects and their favorite CD music to create a high-tech slide show. The Slides & Sound application imports the images users select from PhotoCD and stores them on a hard drive. This allows users to select pictures from several different PhotoCDs and use them in one slide show. Once the images are imported, users can select and arrange images in a window simulating a "light table." Captions can be overlaid on any photo or blank slide and CD audio can be synchronized to the show. A royalty-free runtime feature creates a file that can be viewed on other Macintosh computers. It is bundled with Kodalux processing of a user's first roll of 24 images to Photo CD.
$49.95 retail

Smoothie
Produces anti-aliased graphics from pictures produced by drawing and presentation applications
Macintosh LC or larger; System 7.

Smoothie produces beautiful anti-aliased graphics from pictures produced by drawing and presentation applications. It can take presentations produced using a variety of presentation packages and turn them into a Smoothie SlideShow. Smoothie SlideShows are double-clickable applications that contain the anti-aliased pictures making up the presentation and a program for showing them on screen. Smoothie SlideShows can be distributed license-free and do not require any other program for viewing. Smoothie supports QuickTime in three ways. It can use QuickTime's image compression to reduce the size of the smoothed pictures it produces; it can turn a smoothed picture into a single-frame QuickTime movie (ideal for creating titles for videos); and it can turn a collection of pictures into a complete QuickTime movie.

Special Delivery
Multimedia presentation software product
Macintosh LC or larger; 4 MB of RAM; QuickTime; System 7.

Special Delivery is a multimedia authoring tool that makes the creation of interactive multimedia easy enough for everyday users, yet powerful enough for the demands of professionals. Simple to learn and easy to use, Special Delivery integrates QuickTime movies, pictures, sounds and text to create powerful and effective communication vehicles for interactive presentations, training, kiosks and education. Using Special Delivery's interactive slide metaphor and a unique graphical user interface, anyone can develop interactive multimedia without scripting languages, timelines or flowcharts. Now users are free to concentrate on media content and the message, instead of "fighting" the authoring tool. With Special Delivery, users can even add interactivity to their slides from PowerPoint or Persuasion. Special Delivery includes a host of slide templates, backgrounds and button graphics to get users up and running. Special Delivery comes with built-in buttons that control movies, sound and navigation. In addition, a slide sorter and a wide variety of transitions let users create professional-looking materials quickly and easily.

StandOut!
Desktop presentations/story boarding
Macintosh Plus or larger; external disk drive.

StandOut! is professional desktop presentation software that provides the necessary tools for making 35mm slides, overhead transparencies, flip charts, speaker's notes and audience handouts. The product combines the utility of text processing, graphics, charting and presentation management software into a single package. It delivers full-color, fully integrated charts and graphs; includes powerful text-handling capabilities and professional typographic effects; and provides a range of functions, such as slide sorting and online video review for easy and efficient show organization. StandOut! supports the industry standard file formats to ensure a user's library of images can be imported as graphic enhancements for their presentations. Output devices supported include color and black and white laser printers, thermal printers, phototypesetters, plotters and film recorders.

StrataType 3d 2.0
Three-dimensional typography/graphics
Macintosh II family, LC, SE/30 or larger with FPU; hard disk drive; System 6.0.5 or later.

StrataType 3d enables users to transform TrueType/Type 1 fonts, as well as Adobe Illustrator and PICT files into photorealistic 3-D images. Users simply type in text or import two-dimensional objects, then select from preset bevels, extrusion and text paths, which are customizable. Text and objects are easily manipulated with tools, such as kern, scale, rotate and stretch. StrataType 3d offers textures, such as wood, brick, marble and metals, that apply to text and objects with a click of the mouse. Special effects are achieved with unlimited light sources, light source gels, full-color backgrounds and filters. StrataType 3d is System 7.1 ready, so users can easily access all fonts available through the WorldScript Extension. Images can be exported as PICT, TIFF, EPS, DXF and QuickTime files for import into all page layout programs.

Trumatch ColorPrinter Software
Automatically generates a Trumatch ColorPrinter Reference Guide
Macintosh II.

Trumatch ColorPrinter Software prints out a complete Trumatch ColorPrinter Reference Guide. Users select colors from the Trumatch Colorfinder (a guide to digitally proportioned four-color) and compare them with the colors on the Reference Guide printout. Users will immediately see how close their comp will be to actual on-press colors. Users can correct their colors manually or automatically with color management systems.

VideoFusion
QuickTime video editing
Macintosh II; 5 MB of RAM; hard disk drive; QuickTime; System 7 or later.

VideoFusion is a video editing application that brings extensive special effects to QuickTime movies. VideoFusion belongs to a new category of applications that take advantage of the all-digital nature of QuickTime, allowing the Macintosh to be used as a special effects generator. Support is provided for standard video clip editing and transitions, as well as for independent channel processing for blending and colorizing, perspective transformations for scroll, pan, zoom and three-dimensional fly-by effects, dynamic morphing, filters to highlight edges, create mosaics, smooth and warp images and compositing for overlaying video on video or computer graphics on video. VideoFusion also provides the ability to control its many functions over time to perform fades, smooth transitions, color cycling and dynamic geometric transformations. Because of its exceptional floating point performance, a Power Macintosh processor-based computer running VideoFusion 1.6 will give video producers a 300-percent average increase in performance over the Quadra 950. VideoFusion can be used to produce movies anywhere that the power of QuickTime is used: dynamic documents, just-in-time training, dynamic CD-ROM magazines and, of course, low-cost video editing. VideoFusion builds on the breakthrough functionality of QuickTime to provide users with a unique tool for the QuickTime medium.

VideoScript
Video transition program
Macintosh II; NuVista+ Videographics Card.

VideoScript, a powerful video transition program, harnesses the special effect capabilities of the NuVista and NuVista+ graphics engines to provide a wide variety of recordable 16-bit/pixel transitions, so users can create compelling presentations and then output to video tape. Twenty-eight sophisticated transitions are provided, including fades, blends, pushes, wipes and reveals. Live video can also be modified with effects like capture, posterization and video strobe, or overlay text and graphics on the live source. Unique blend capabilities allow users to transition between live video and computer graphics through a full range of transparency percentages. With VideoScript and a NuVista or NuVista+ graphics engine, users can turn their Macintosh into a broadcast-quality video production suite.

VideoShow
Desktop presentation systems
Macintosh SE or larger.

The VideoShow family provides a full range of electronic presentation solutions that not only produce slides, transparencies, overheads and handouts, but also provide a conference room delivery tool. The VideoShow system uses disks prepared on a Macintosh and can be connected to any color monitor or large screen video projector to create full color presentations. Operated via a wireless, hand-held remote control unit, VideoShow offers a broad spectrum of special effects, such as fades, wipes, spirals and weaves. Three models are available. The VideoShow Professional displays up to 100,000 simultaneous colors in photographic images and up to 5,000 simultaneous colors in computer-generated images. The VideoShow Executive offers boardroom-quality presentations of computer-generated images with 1,000 simultaneous on-screen colors. An extended features board adds genlock, additional memory, NTSC composite video output and an AppleTalk port.

The Virtual Meeting
MultiMedia TeleConferencing (MMTC) system
Macintosh LC or larger; 8 MB of RAM; QuickTime; System 7.0 or later.

The Virtual Meeting is a MultiMedia TeleConferencing (MMTC) System. It is a suite of applications that create an interactive multimedia communications environment that can be used to conduct meetings, lectures and presentations between participants in many geographically dispersed locations. The system is designed to be used concurrently with an audio conference call and adds the ability to control and synchronize the simultaneous presentation of text, graphics, images and video on every participant's screen from one location. The Virtual Meeting system allows people with ordinary desktop computers and modems to visually communicate while talking on an ordinary audio conference call. The person who has the floor in a Virtual Meeting can control the simultaneous presentation of slides, QuickTime or video clips, live sketching or the documents that were created with any Macintosh application. A meeting participant can electronically raise his or her hand at any time. When the meeting moderator recognizes a question, they give that person the conference floor and their photograph is displayed in each participant's Current Speaker window. The meeting protocols supported are moderated and unmoderated meetings, as well as circle and roundtable discussions. Telephones are great for communicating many ideas, but there are times when a visual aid might be required to communicate — that's what The Virtual Meeting system is for. Applications are included in the suite for Sketching something for all the users simultaneously and for showing QuickTime movies or slide shows to all the users simultaneously.

4-SEPS
Color separation
Macintosh II; 24-bit color board.

4-SEPS is a software program that separates the image editing functions from the image separation functions. 4-SEPS produces a Candela ColorCircuit file, which fully describes the specified color separation transform. This saved ColorCircuit file is used by 4-SEPS to perform actual color separations on a daily basis. Any number of ColorCircuit files may be made for applications requiring different color separation control settings. RGB files are accepted in EPS, TIFF or Targa formats. Color separations are written as EPS, TIFF or Scitex CT files. These CMYK files are compatible with many other Macintosh programs and with most major high-end pre-press systems and imagesetters. Features include: full control over GCR, UCR, dot gain and black point; all color separation settings may be saved and retrieved; provides preview of RGB image and all separation images; incorporates a guide for SWOP standards; and simple to install.
$2,500 retail
Candela, Ltd.; 1676 E. Cliff Rd.; Burnsville, MN 55337; 612-894-8890 or 612-894-8840 (fax)

Adobe Type Manager
Lets users get PostScript-quality type on non-PostScript printers and screen displays
Macintosh Plus or larger; 1 MB of RAM; System 6.0.2 or later; PostScript printer.

Adobe Type Manager brings the quality of Adobe PostScript language outline fonts to both the display and non-PostScript language printers. Existing application programs are able to display and print type at any point size from Adobe outline fonts without irritating jagged edges. The text appears smoother and is easier to read both on the screen and in print. Adobe Type Manager includes the most popular 13 LaserWriter outline fonts from the Helvetica, Times, Courier and Symbol families. It also works with any of the more than 1,000 typefaces available in the Adobe Type Library. Users can purchase the Adobe Plus Pack and obtain the remaining 22 LaserWriter outline fonts that are resident in NT and NTX printers.

■ **AdTracker**
Keeps track of document revisions
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

AdTracker helps keep users abreast of revisions to a document in QuarkXPress by keeping a log of the date and time of individual revisions of a document, as well as providing the number of times the document was saved. AdTracker keeps track of the total time the document was in use — an invaluable feature when billing a client by the hour for design work. AdTracker can list users by their computer's chooser name or by a login name, which is requested each time the QuarkXPress application is launched. AdTracker allows users to limit the length of the individual usage log, and the document's usage information may be saved to a text file to facilitate record keeping or for later reference.

Alaris Apertura
Adobe Photoshop plug-in that enhances performance by opening any smaller portion of an image
Macintosh with 8 MB of RAM; Color QuickDraw; Adobe Photoshop; Intel-based Scitex equipment.

Alaris Apertura is a time-saving Acquire/Export plug-in for Adobe Photoshop. It allows users to open a small portion of an image, significantly reducing image load, edit and save times. Users select the crop to open from a large, accurate preview. When users have completed editing, Alaris Apertura automatically remembers where the crop came from and will insert the edited crop back into the original image or a copy of

it. Apertura Access technology enables users to edit images on foreign disks, such as CTs and LWs, directly on iRMX-formatted Scitex optical disks or hard disk shuttles with no file copying. Also, with this technology, scans can now be sent on Scitex optical disks directly to "desktop" customers who also own Alaris Apertura.
$199 to $2,995 retail
Alaris Corp.; PO Box 14562; Research Triangle Park, NC 27709; 919-544-1228 or 919-544-7772 (fax)

Aldus HomePublisher
Document layout program
Macintosh Plus or larger; 2 MB of RAM (4 MB recommended); hard disk drive; System 6.0.5 or later.

Aldus HomePublisher is a one-stop publishing kit that includes: Aldus Personal Press 2.0, more than 50 professionally-designed document templates, 12 TrueType fonts from Bitstream, 100 home and small business ClickArt images from T/Maker and 25 sheets of specialty paper. Aldus HomePublisher is designed to be the complete publishing package that lets users turn out first-class, professional-looking publications, newsletters, brochures, flyers, calendars and more. Aldus HomePublisher includes more than 50 "intelligent" AutoCreate templates, which make publications practically create themselves. These "smart" templates present users with a series of options regarding what type of publication they want to create (newsletter, brochure, flyer, etc.) and how they'd like the document to look (two or three columns, with or without a table of contents, etc.), and guide them through creating it using their own text and graphics. Once the initial decisions are made, the program creates, builds and finalizes the document down to the last detail, so it's ready to print in a matter of minutes.
$49.99 suggested retail
Aldus Corp. Consumer Division; 5120 Shoreham Pl.; San Diego, CA 92122; 800-888-6293 or 619-558-8723 (fax)

APE
Sign manufacturing; converts PostScript files to plotter commands
Macintosh II or larger; desktop publishing application.

APE is a utility that converts PostScript files to plotter commands for the purpose of driving vinyl-cutting plotters from desktop publishing applications. It is compatible with Adobe Illustrator, Aldus FreeHand and others, and drives most of the plotters on the market today. A graphical display of the actual output is generated prior to cutting, allowing users to determine if editing is necessary. The artwork can be cut in any size, and the vinyl is cut in segments to produce large artwork. It is MultiFinder friendly, allowing cutting to proceed while a user is editing the next sign. Detailed instructions for connecting the various plotters are included.
$350 retail
Sign Equipment Engineering, Inc.; PO Box 6188; Bellevue, WA 98008; 206-747-0693 or 206-562-3017 (fax)

Arabic XT 2.0
Arabic XTension for Quark XPress
Macintosh Plus or larger.

Arabic XT is a Quark XTension designed to bring the capabilities of XPress to the Arabic market. The package consists of an International version of QuarkXPress 3.3 bundled with a new release 2.0 of Arabic XT, professional edition. The benefit of the Arabic XT is that it does not require the Mac Arabic system. The Latin System 7 or later are required. The program includes a nice library of the most commonly used Arabic fonts: leyla, Youmna, Souraya, Gihane and Salwa. Optional fonts are: Marwan, Samar and Nada. Also, Layout has licensed the entire set of Agfa Compugraphic fonts and several typefaces from Boutros. The bundled package is fully compatible with the features of QuarkXPress 3.3. A close collaboration between QuarkXPress and Layout Ltd. gives the product the performance expected from a high-end Arabic desktop publishing package. The package will also support any additional XTensions developed for QuarkXPress. Among the features that Arabic XT supports are: multiple columns, Drop Caps, paragraph indents, tabs, variable-shaped text boxes, gray-scale TIFF shading, coloring blending, automatic and controlled trapping, automatic Kashida inertion and ligature selection.
$1,595 retail

■ **Assassin**
Lists active graphics
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

Assassin makes removal of some or all graphics from users' documents quick and easy. A single dialog lists all of the graphics in the currently active document, enabling users to select any or all of them and remove them from the document with a click of the mouse button. Another dialog makes it possible for users to remove graphics from one or more documents by the graphics attributes. Users use the controls to specify a particular graphic type, volume and/or file name prefix. Assassin scans a document or an entire folder of QuarkXPress documents and removes the graphics that meet the parameters defined in the dialog.

Atlantis Data Publisher
Incorporates text and graphics publishing around a full-bodied report writer engine
Macintosh Plus or larger.

Atlantis Data Publisher incorporates text and graphics publishing around a full-bodied report writer engine. Users can easily design data publishing templates that will then publish documents of unlimited length, including sophisticated data formatting, pictures, drawings, paginations, drop-boxes, shadowing, colors, formatted text, data and more. Not just a "page publisher," Atlantis handles large catalogs, as well as simple layouts. Users can access all popular local and host databases, such as ASCII flat file, tab delimited, 4th Dimension, FileMaker Pro, Excel, xBase, SQL Server, Sybase, Oracle, Ingres, DB2, ctree, XDB, EBCDIC and more.

■ **AutoLib**
Creates library of graphics
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

The AutoLib XTension can create a library of artwork used in QuarkXPress in record time. Uses just specify the XTension folder of graphics and in no time those graphics will be housed in a handy library, ready to be added to documents with drag-and-drop ease. AutoLib saves users time in two ways: in creating the library much faster than they could by hand and by the drag-and-drop insteading of importing the graphic. AutoLib recognizes EPSF, EPSF PC, PICT, Paint, RIFF, TIFF, Scitex CT and DCS master files.

■ **AutoXTract**
Scans preselected folders for QuarkXPress documents
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

AutoXTract is a utility that scans preselected folders for QuarkXpress documents, opens the document, and exports all of the text from those documents to a user-selected folder as a text file. The text stories are exported in order from left to right and from top to bottom. With AutoXTract, it becomes easy to set up an archiving routine that will run automatically. AutoXTract lets users choose which folders to scan for files and uses a user-designed folder for output. The file name for the output can be controlled as well. Options include using the first eight letters of the QuarkXPress document name, using the first 12 letters of the name and using the entire name. AutoXTract can also be set to add an extension to the end of each exported text file for easier identification.

Vision's Edge, Inc.; 3491-11 Thomasville Rd., #177; Tallahassee, FL 32308; 904-386-4573, 800-983-6337 or 904-386-2594 (fax)

■ **Bar Code Creator**
Integrates desktop publishing with PostScript bar codes
Macintosh Plus or larger; 2 MB of RAM; System 6.0.5 or later.

Bar Code Creator allows users to create bar codes on a Macintosh, save them as EPS files and import the bar code into graphics and publishing programs. Bar Code Creator allows the integration of the bar code within a package's graphics; therefore, there are no more film master charges, no more hand stripping and first generation quality is achieved. The software lets users adjust symbol sizes (narrow bar, ratio, height) to accommodate a design. Users can choose between UPC-A, UPC-E, EAN 8, EAN 13, I2 of 5, Code 39, Code 128, Codabar or Pharmacode and specify black and white output or color. Bar Code Creator also allows users to add supplemental codes, bearer bars and corner marks.

Bar Code Xpress
Bar-code production and management
Macintosh Plus or larger; 2 MB of RAM; QuarkXPress 3.0 or later; System 6.0.5 or later.

Pre-press bar-code production and management is changing. The process can be confusing, time consuming and expensive, or it can evolve the BCS SymArt Software Way: film masters, digital EPSF, database management or all three. The BCS SymArt Software Way allows users to build up to their desired level at their own pace and with the assistance of BCS' bar-code software specialists to guide them. BCS SymArt Software has mapped out an intelligent transitional path to the future with innovations that include databases that store bar-code formats, product numbers, family codes, value codes and printing process specifications: Product Codes — Versions A and E (zero suppressed); Coupon Codes — automatic redemption numbers, add-on codes and market tracking; Shipping Container Codes (SCS) — I 2 of 5 (ITF) formats with bearer bars; and Printing Processes — flexography, offset, gravure, silkscreen, rotary letterpress.

BarCode Labeler II
Bar-code label program
Macintosh Plus or larger; 2 MB of RAM.

BarCode Labeler II allows users to easily create, edit and print bar codes in Code 3 of 9, Interleaved 2 of 5, Code 128, Code 93, UPC (A & E), EAN (8 & 13) and Codabar symbologies. Bar codes can be created directly from the screen or merged with existing data files. Multiple data fields can be combined into one representative bar code. Users have full control over positioning of the bar code with rotating and flipping commands. The human readable text can be hidden, or display above or below the bar code. BarCode Labeler II offers graphics capabilities, user-definable layouts and the ability to print sequential and repeating bar codes.

BlendBuilder
Allows users to blend new colors from within QuarkXPress during the design or production process
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; QuarkXPress 3.0 or later.

Blending new colors from within QuarkXPress during the design or production process is not always an easy task. That task becomes even more difficult when users must compliment existing colors that are based on different color matching systems. BlendBuilder is an XTension that performs this chore for users. BlendBuilder provides the tools that allow users to experiment with more options and ensures results that are far more accurate than those derived by hand. Tightly integrated with the XPress user interface, BlendBuilder allows users to add colors to their current document or the XPress application directly. New colors are added by specifying two base colors, the number of blends preferred and a color model to base the blends on. Users may blend colors based on the HSB, RGB or CMYK color models to achieve unique results. A preview feature allows users to view the colors before they are added to the document, as well as offering them the ability to compare that color with its two base colors. Support for colors based on the HSB, RGB, CMYK, Pantone, Trumatch and Focoltone color matching systems is included. In addition, users who have installed the Color Sets file may choose from the Pantone Process, Pantone ProSim and Pantone Uncoated color matching systems.

■ **BoxStyles**
Provides style sheets for text and graphics boxes
Macintosh II or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

BoxStyles provides style sheets for text and graphic boxes in QuarkXPress. Users can apply a BoxStyle to various boxes throughout a document or documents, then have the boxes' attributes update whenever they modify the BoxStyle style sheet. Like a style sheet, users can create a BoxStyle by acquiring the attributes of a selected text or graphic box. Users can rename, alter or remove the BoxStyle at any time.

Cachet Color Editor
Color correction and reproduction
Macintosh LC, II, Quadra or Performa family with math coprocessor; 5 MB of RAM; hard disk drive; 8-bit color video card; 13-inch color monitor.

Cachet is a new class of software for color correcting and printing color photographs. Cachet provides a simple, intuitive solution to the challenges of color correction and reproduction. Color correction is easier thanks to Cachet and a unique concept called Edit By Reference. Now users can visually match their uncorrected image to an on-screen image that's already been corrected and printed with known results. For fast and automatic results, Cachet includes a feature called MultiChoice, which presents users with multiple suggested corrections to their images. From these images, users simply click on the one that most closely matches the selected reference image; Cachet does the corrections for users by adjusting the proper controls. Color printing and separations (CMYK) with Cachet is automatic, predictable and consistent. Through the EfiColor color management system, Cachet ensures that users will get high-quality color on any EfiColor supported device. Using EfiColor profiles, Cachet automatically optimizes a user's image for their printer or the printing method they are using.

CAD To Mac
Universal CAD graphics importer for Macintosh publishing
Macintosh Plus or larger; hard disk drive recommended.

CAD to Mac provides easy translations of CAD drawings into PICT format for use in technical manuals or any other publication. This eliminates the time and expense of recreating design drawings. CAD to Mac provides a total solution for cross platform transfers. The program supports most popular CAD platforms, such as Mentor Graphics, SDRC I-DEAS, AutoCAD and PCad (any system that supports HP plotters). CAD drawings can be easily translated into object files that can be opened and edited by Macintosh applications, such as MacDraw, Canvas, SuperPaint, FreeHand or any program that can import a PICT file. CAD to Mac can scale, edit and print the translated drawing. The serial capture feature allows smooth transfer of drawings directly between the CAD system and Macintosh computer without requiring disk drive compatibility. The required hardware (cable and adapters) is included. CAD to Mac is System 7 compatible.

CADMover 4.0
Vector graphics translator
Macintosh Plus or larger.

CADMover enables users to get their 2-D and 3-D graphics where they need to be: across departments, computer platforms or programs. Users can synergy via 3DGF, Adobe Illustrator, Architron II, CGM, ClarisCAD, DDES2/IT8.6, Dimensions, Dreams, DXF (both text and binary), ENVISAGE 3D, Gerber Plotter, HPGL, Focus, Zoom, IGES, MacDraft, MacDraw II, MiniCAD+ Text, PICT, Presenter Professional, Sculpt 3D, STL (stereolithography), Super 3D Text and Wavefront (.OBJ). CADMover's precision transformation logic maintans a high degree of accuracy for all calculations. Translation options include multiple layers and levels, multiple drawings within a file, scaling between most formats, unlimited file size with use of hard disk and full color. CADMover 4.0 has pan and zoom for accuracy checks, new editing dialogs and six new EPSF readers.

Candela Color Management System (CCMS)
Color implementation tools
Macintosh II or Quadra family; 24-bit color board.

The Candela Color Management System (CCMS) is a full-featured ensemble of object libraries that provide product developers and system integrators with a powerful and flexible set of proven software color implementation tools. CCMS offers full device characterization and calibration facilities. It supports the linearization of any image acquisition, viewing or reproduction device, including scanners, monitors, hard copy printers, film recorders and imagesetters. Ultra-high accuracy is achieved through close attention to smoothness and continuity using third and fourth dimensional non-linear functions. These complex color transformations are optimized, without sacrificing color quality, into Candela ColorCircuits, specially designed for speed. Professional color separation for any four-color printer includes independent dot gain, GCR and UCR controls. Gamut mapping, test pattern generators and reference color definition make the CCMS a complete and essential package for the successful creation of a wide variety of color products without further involvement by Candela.

Candela Color Separation Library (CCSL)
Color implementation tools
Macintosh II or Quadra family; 24-bit color board.

The Candela Color Separation Library (CCSL) is strictly for developers who need the best in color control for color separation applications. The CCSL is a complete C callable object library for creating and using professional-quality color separation transforms. The CCSL has powerful pre-press and color matching controls. Dot gain may be set for the four printing channels. Undercolor removal (UCR) is used to control the total ink coverage in the four-color print. Gray component replacement (GCR) is used to control the balance between the black printer and the colored printers. The black point is used to specify the darkness of the printed full RGB black. There are color matching controls used to calibrate any RGB monitor to print. The CCSL is available for the following environments: PC/Windows 3.1; Macintosh/MPW and Think C; Sun SPARC/Sun OS and Solaris 2; and NeXT/NeXTSTEP 3.0.

■ **CapSize**
Resizes text by point size
Macintosh II or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

The CapSize QuarkXPress XTension allows users to resize text by point size. Users can set the size of type by its actual height. CapSize displays the type size either by cap height, zero height or accented height. Users may choose to have the XTension express the text height in points, inches, picas, millimeters or ciceros. CapSize offers a dialog and convenient palette that allows users to see and change the height of the currently selected text. Text height can be changed either by entering a new value or it can be changed with two handy arrow keys that enlarge or shrink the text by a percentage defined by the user.

■ **CH-Interchange**
Converts images from one format to another
Macintosh Centris, Quadra or Power Macintosh; 8 MB of RAM; hard disk drive; 24-bit display; Adobe Photoshop; System 7.0 or later.

CH-Interchange is part of the Color Highway solution for converting images from one format to another. The complete package includes CH-interchange, the CH-JPEG Photo Plug-in and CH-PegIt. CH-Interchange is a stand-alone application that provides conversion from and to TIFF, EPSF, CH-PEG, EPSF/JPEG, RGB/TIFF and low-res TIFF — all in a single package. A useful, additional feature is the ability to attach keywords to images that can then be used in an image database application. Users can convert images to EPSF/JPEG files that can be used directly in page makeup applications. All JPEG files are fully compatible with PostScript Level 2 RIPs. With a proven compression ratio of 10:1, even on images with a high degree of detail or with slowly changing detail, the savings on data storage network traffic and production times are tremendous.

CheckPost 1.3
Prints a proof copy of a PostScript file on laser printers so users can check before imagesetting
Macintosh Plus or larger; System 6.0.5 or later.

If users work with service bureaus, they have probably had problems getting the right output from the imagesetter. This can cost money, cause missed deadlines and lose business. CheckPost reduces this risk by using a laser printer to generate a proof copy of PostScript files — letting users preview on paper, not on expensive imagesetter film. CheckPost is easy to use. Users print to a PostScript file from any application using the standard Mac Print dialog. CheckPost then verifies the file download, shows how the pages will image — even prints a service bureau order form containing a complete description of the document and its fonts. This gives the service bureau the information they need to do the job right. A PostScript document that includes all fonts will print on the imagesetter exactly as it proofs from CheckPost.

Cirrus PowerLite 2.1
Professional scan and image manipulation program
Macintosh with 68020 or larger processor; 4 MB of RAM; System 6.0.7 or later.

Cirrus PowerLite is a professional scan and image manipulation program that easily enables more casual and inexperienced users to get the best possible output from their hardware. It offers optimized drivers for almost every entry-level and mid-range scanner in the market, a powerful (freeform, point list, etc.) brightness, contrast and gamma control and a simple interface. Applying all of a user's settings to a fresh initial scan delivers high-quality data that cannot be surpassed by any post scan digital manipulation. The integration as a full-fledged scan module into other applications, such as QuarkXPress, PageMaker or Photoshop, is enabled by AppleEvents, far surpassing both the capabilities and usability of existing plug-ins or XTensions. Cirrus PowerLite takes full advantage of the increased performance of the Power Macintoshes, but also runs on standard Macintoshes.

Cirrus PowerPro 2.1
Scan and image manipulation program
Macintosh with 68020 or larger processor; 4 MB of RAM; System 6.0.7 or later (System 7 for use of ColorSync or AppleScript).

Cirrus PowerPro is a state-of-the-art scan and image manipulation program that easily enables both the inexperienced and the professional user to get the best possible output from their hardware. Optimized drivers for almost every scanner in the market, complete support of Apple's ColorSync system level calibration and AppleScript (both included in the PowerPro version) and the powerful (freeform, point list, etc.) brightness, contrast and gamma control allow users to record even the most complex and repetitive scan operations and reduce them to a single menu command. Applying all of a user's settings to a fresh initial scan delivers high-quality data that cannot be surpassed by any post scan digital manipulation. Cirrus PowerPro has all the advanced features, such as batch scanning, oversampling (for 10/12-bit scanners) and printer gamut alarm. The integration as a full-fledged scan module into other applications, such as QuarkXPress, PageMaker or Photoshop, is enabled by AppleEvents, far surpassing both the capabilities and usability of existing plug-ins or XTensions. Cirrus PowerPro takes full advantage of the increased performance of the Power Macintoshes, but also runs on standard Macintoshes.

Classic Textures
Professional typesetting
Macintosh Plus or larger; 4 MB of RAM; hard disk drive.

Classic Textures is a typesetting system composed of Lightning Textures, Latex math and science macros and 75 Computer Modern PostScript fonts. Lightning Textures is a fully compatible, interactive Macintosh implementation of the TeX typesetting standard. It lets users compose and typeset large and complex documents, including books, technical manuals, proposals, scientific papers, product documentation, catalogs and journal articles. Textures features superior typographic control and the ability to typeset documents of any length — up to several thousand pages. It is ideally suited for large typesetting jobs that require cross-referencing, automatic inclusion of tables, figures and footnotes, insertion of illustrations/exhibits or generation of indices, bibliographies and tables of contents. In addition to producing accurate kerning, hyphenation and justification, Textures has the flexibility to handle difficult problems, such as unusual copy-fitting, multilingual text and mathematical formulas. Because Textures automates the formats that users design, it's able to accommodate the frequent revisions by multiple authors, editors and programmers that occur in company-wide or departmental use. Textures lets users use text-only files created with any other Macintosh editor or word processor. Charts, diagrams and graphics can be imported from other Macintosh applications and scaled to fit. Users can preview typeset pages on screen, including graphics, in a WYSIWYG format at any magnification up to full LaserWriter resolution of 300 dpi. A document is retypeset and previewed at each keystroke.

Color Calibration Software For PostScript Imagesetters
Print production software
Macintosh Plus or larger.

Color Calibration Software for PostScript Imagesetters is used to produce film for multicolor printing. It adjusts a PostScript-based system for accurate color reproduction. Features include: the capability to adjust film density and halftone screens independently, insuring optimal results and the greatest latitude in plate making; the capability to hold all halftone screens to within +/- 1 percent of specified values, insuring accurate and repeatable color reproduction; and the capability to control page geometry, insuring accurate, repeatable registration. Color Calibration Software works in conjunction with popular page layout programs, such as PageMaker and QuarkXPress, with graphics programs, such as FreeHand and Illustrator, as well as with programs for retouching scanned images, such as Photoshop and ImageStudio. The software runs on Macintosh computers and PostScript imagesetters, including the Linotronic L300 and L330p, Agfa Compugraphic's ProSet and SelectSet series of imagesetters and Varityper's Series 4000 imagesetters.

Color Highway
Direct Macintosh link to high-end drum scanners
Macintosh Centris, Quadra or Power Macintosh; 8 MB of RAM; hard disk drive; 24-bit display; Adobe Photoshop; System 7.0 or later.

Color Highway is a family of high-end scanner links. CH-Scan, the first product in the family of modular software and hardware products, is an intelligent NuBus interface card. CH-Scan includes Macintosh scanning software, appropriate cabling, diagnostics and all documentation. It links Macintosh computers directly to high-end drum scanners from companies like Hell, Crosfield, Itek and Dainippon Screen. It provides a cost-effective way for trade shops, printers, newspapers and advertising agencies to quickly transfer high-resolution scans to Macintosh systems. CH-Scan plug-in software lets users acquire scanned images within Adobe Photoshop. CH-Scan also includes a stand-alone scanning application, which can save individual scans — or batches of images — directly to the Macintosh hard disk. Both versions of the CH-Scan software support RGB, CMYK, gray-scale and line-art images, as well as JPEG, TIFF, EPS and DCS file formats.

■ **Color Usage**
Color reporting mode for QuarkXPress
Macintosh II or larger; System 6.0.5 or late, QuarkXPress 3.2 or later.

Color Usage helps users by reporting on how and where they used each color in their document. In detailed reporting mode, the XTension lets users know on what page each occurrence of a color is found, at what shade the color appears and whether the color was set to Separations Off or Separations On. Additionally, Color Usage knows whether the color was found in a background, a picture, a border or in any other kind of page element. The Color Usage XTension lets users print out the color information, and it gives them the option to save the data to a text file for later reference. With a click of a button, users can preview a color on screen and check its color breaks by both RGB and CMYK components.

ColorAccess 1.4
Professional color separation software
Macintosh II or Quadra family; 5 MB of RAM; floating point processor; System 6.0.5 or later.

ColorAccess is powerful color separation software that emulates the color control software found in expensive high-end drum scanners. ColorAccess is used by commercial printers, service bureaus, publishers and professional designers to color correct and separate photographic images in preparation for printing on commercial printing presses. ColorAccess is used to prepare images for advertisements, magazines, newspapers, books and sales collateral and packaging. ColorAccess offers productivity features, including job tracking, job style sheets and background and batch processing. It also features a unique multiple-level user interface that allows novices to create quality color separations effortlessly without limiting access to the controls required by experienced color separators. Recently upgraded, ColorAccess now includes support for Photo CD and device characterizations for a variety of input and color proofing devices.

Desktop publishing reference
Macintosh IIci or larger; 8 MB of RAM; System 7.0 or later; QuickTime; 13-inch monitor; 2 MB of available hard disk space; CD-ROM drive.

ColorExpert 1.1 Pro combines ColorExpert 1.1 Tutorial and ColorExpert 1.1 Test Files. The tutorial is an interactive education and reference resource for users publishing in color on the desktop. It uses animations and interactive images, plus extensive text references to clarify the concepts and practices that lead to success in color publishing. Included with ColorExpert Pro is a 64-page proof-printed book of reference photographs that show how digital techniques are realized as ink on paper. The Test files are a suite of test files for evaluating the performance of graphic arts systems.
$195 retail
ColorExpert, Inc.; 555 Richmond St. W, Ste. 504; Toronto, Ontario, Canada M5V 3B1; 416-360-3894 or 416-360-0204 (fax)

■ **ColorExpert 1.1 Test Files**
Evaluating graphic art systems
Macintosh IIci or larger; 8 MB of RAM; System 7.0 or later; QuickTime; 13-inch monitor; 2 MB of available hard disk space; CD-ROM drive.

ColorExpert 1.1 Test Files are a suite of test files for evaluating the performance of graphic arts systems. ColorExpert contains a 64-page proof-printed book of reference photographs that provides a color reference. Users can test for black and white output (black and white halftones at various screen frequencies and duotones), test for digital output (digital printer color fidelity and resolution in nine standard color files formats), test for memory colors (accuracy of colors of familiar objects by digital printers), test for newspaper page (test of an imagesetter's ability to handle page complexity commonly experienced in newspapers, press evaluation), test for output (test of imagesetter and film proofing capabilities [speed, positional accuracy from plate to plate and line to line, color fidelity]), test for printer output (capability and speed test for laser printer) and test for trapping (various tests for autotrapping performance of reasonable and moderate difficulty).
$75 retail
ColorExpert, Inc.; 555 Richmond St. W, Ste. 504; Toronto, Ontario, Canada M5V 3B1; 416-360-3894 or 416-360-0204 (fax)

■ **ColorExpert 1.1 Tutorial**
Desktop publishing reference
Macintosh IIci or larger; 8 MB of RAM; System 7.0 or later; QuickTime; 13-inch monitor; 2 MB of available hard disk space; CD-ROM drive.

ColorExpert 1.1 Tutorial is an interactive educational and reference resource for users publishing in color on the desktop. It uses about 350 animations, interactive images and infographics, plus extensive text references to clarify the concepts and practices of successful color publishing. The material covers the complete color process, and includes material on preparation of photos and artwork, scanning and color correction, production requirements like trapping and color management, preparation of files for fast, trouble-free imaging (preflight), quality checking and proofing. A hypertext/interactive section aids troubleshooting, and a 64-page book shows how digital files appear as ink on paper.

Colorfit
Color balances an MGI Solitaire or Sapphire Image Recorder
Macintosh SE/30 or II family.

Colorfit is a Macintosh application used to color balance an image recorder. It performs this color balance by first finding a balanced density minimum (Dmin) and then successively refining Look Up Tables (LUTs) in an automated fashion. The result is a gray scale that is neutral and is calibrated with respect to density distribution. This will enable the film recorder to make full use of its entire tonal range.

ColorMatch, ColorMatch Pro And Colorimeter 24
Color management solution
Macintosh II or larger.

ColorMatch software enables users to create a consistent color environment. Now users can calibrate their input, color display, output and four-color proofing systems to the same precision standards found at high-end imaging service bureaus and color separation houses. ColorMatch is based on the proven Kodak Color Management System (KCMS). It includes a starter set of Kodak's Device Color Profiles (DCPs) for a variety of popular scanners, color displays and output devices. ColorSet Calibration software is included, so users can calibrate any color display in visual mode. ColorMatch is 100 percent compatible with KCMS-supported applications, such as Adobe Photoshop and QuarkXPress. It provides transparent output previews on the screen, so users know how their color images and documents will look before printing; no gamut alarm is needed. ColorMatch can be accelerated with the DayStar Charger or Charger PFS with Charger Suites Vol. 3 or 4. Additional KCMS profiles are available through the Color On Call floppy disk (included) or CD-ROM.

ColorMatch Pro provides all the functionality of ColorMatch, plus interactive simulation of output on a display. ColorMatch Pro uses Photoshop's powerful editing tools to work on color-corrected files as they will appear when printed. Plus, ColorMatch Pro includes special effects filters and custom integration utility software, making it even more power.

Colorimeter 24 is a precision colorimeter measuring and calibration instrument at an entry-level price. Much more than just a luminance meter, Colorimeter 24 take a quantum leap beyond reading a display's light intensity. It precisely measures the condition of a color display's red, green and blue (RGB) phosphors to create a custom KCMS profile. When used with ColorMatch and support KCMS applications, Colorimeter delivers exact color matching of an original input to the printed output or four-color proof. It supports all 13-inch or larger color displays and includes ColorSet Calibration software.

Colortron
Professional-caliber desktop spectroradiometer
Macintosh with 2 MB of RAM; color display recommended; System 7.1 or later.

Colortron is professional-caliber desktop spectrometer for the capture, manipulation, specification and control of color. It features 32-bands of 10 nanometer constant bandwidth spanning the full visible spectrum. Colortron is capable of precisely capturing the unique spectral profile of virtually any color from both reflective and self-luminant targets. By providing an easy and affordable way to use spectral descriptions of color in computers, Colortron eliminates the need for extensive skills when working with color, allowing users to focus on intent. Production professionals will also appreciate the custom color formulation and device and system-wide calibration capabilities supported by this new product.

Conductor
Imaging software
Macintosh SE/30 or larger.

Conductor Imaging Software gives users complete job processing control of their Agfa film recorder using the Macintosh. It offers the perfect solution for imaging PICT, TIFF and Scrapbook files. Conductor's image management capability is fast, powerful and convenient. Users can shoot a group of both slides and prints, select global defaults and even preview images. A complete tool palette allows users to modify their layout. Whether users need to resize an image or center it in a frame, it can be done quickly and easily. It supports all Agfa film recorders, as well as the MaxiColor printer. With an AppleTalk network, users can share their film recorder among many users using Conductor remote.

■ **Copy & Apply**
Change attributes from one paragraph to another
Macintosh II or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

QuarkXPress allows users to copy paragraph attributes from one paragraph to another in the same chain. Changing different attributes of one range of text to match another can be time consuming. Copy & Apply fills the gap by making the transfer of character and/or paragraph attributes as easy as executing two keyboard commands. Because it is run completely by keyboard commands, Copy & Apply is virtually

invisible, yet is a powerful tool. The XTension's Preferences dialog allows users to configure their own keyboard commands. It also allows users to choose whether or not they want the style sheet information to be included in the copy and apply process.

CopyBridge 3.2
Links the editorial power of XyWrite to the page layout capabilities of QuarkXPress
Macintosh SE or larger; 2 MB of RAM; hard disk drive; QuarkXPress 3.1 or later.

CopyBridge links the editorial power of XyWrite to the page layout strengths of QuarkXPress for the Mac or PC, streamlining the process of assigning text to story boxes by communicating typographic and fit information between systems. In addition, CopyBridge contains a "Hot Import Folder" option, which provides completely automatic import, export and translation of XyWrite files, allowing QuarkXPress to serve as an "H&J server" for an XyWrite workgroup. Supports CopyFlow Extract, Apple Events and Edit Notes II.
$2,295 retail
North Atlantic Publishing Systems, Inc.; 9 Acton Rd., Ste. 13; Chelmsford, MA 01824; 508-250-8080 or 508-250-8179 (fax)

CopyBridge/W 3.2
Links the editorial power of Microsoft Word to the page-layout strengths of QuarkXPress
Macintosh SE or larger; 2 MB of RAM; hard disk drive; QuarkXPress 3.1 or later.

CopyBridge/W, an extension to QuarkXPress, links the editorial power of Microsoft Word to the page-layout strengths of QuarkXPress, streamlining the process of assigning text to story boxes by communicating typographic and fit information between systems. Using Microsoft's Rich Text Format (RTF), CopyBridge/W can import and export files to any Macintosh or PC word processor that supports RTF. Programs that support RTF include Microsoft Word for the Macintosh, Microsoft Word for the PC and WordPerfect. In addition, CopyBridge/W contains a "Hot Import Folder" option that provides completely automatic import, export and translation of Word files, allowing QuarkXPress to serve as an "H&J server" for a Word workgroup.
$2,295 retail
North Atlantic Publishing Systems, Inc.; 9 Acton Rd., Ste. 13; Chelmsford, MA 01824; 508-250-8080 or 508-250-8179 (fax)

CopyFlow 3.2
Batch import and export of text and graphics to QuarkXPress for the Mac or PC
Macintosh SE or larger; 2 MB of RAM; hard disk drive; QuarkXPress 3.1 or later.

CopyFlow is a QuarkXTension — a program that "extends" the features of QuarkXPress 3.0 and later. It provides additional menu selections that let users import and export text and graphics files into QuarkXPress pages automatically. CopyFlow lets users import and export text with any of the Quark-supported word processing filters. It supports both Quark Extended Style Tags and NAPS own style tags for text file markup. CopyFlow has expanded compatibility with the XyWrite word processing program; has multiple layout boxes that can optionally have the same name, enabling automatic import of recurring text or graphics; and the option to picture import, which applies the art position and scaling edits automatically. CopyFlow supports Apple Events, CopyFlow Extract and Edit Notes II.
$395 retail
North Atlantic Publishing Systems, Inc.; 9 Acton Rd., Ste. 13; Chelmsford, MA 01824; 508-250-8080 or 508-250-8179 (fax)

CopyFlow Extract
Retrieves text from designated QuarkXPress documents and places them as text files in an assigned folder
Macintosh II or Quadra family; 4 MB of RAM; CopyFlow 3.2; QuarkXPress 3.1 or later.

CopyFlow Extract is an accessory to North Atlantic Publishing Systems' XTensions CopyFlow 3.2 and CopyBridge 3.2. Extract automatically retrieves text from designated QuarkXPress documents and places them as text files in an assigned folder. Extract can retrieve all the text files from an individual Quark document, or work in a batch mode, extracting all the text from any number of Quark documents. Extract places the retrieved text files in a designated "Export Folder," naming each file after the box name in the document. The retrieved files may be in any number of different text formats, such as Microsoft Word and XyWrite, available through Quark or CopyFlow itself.
$495 retail
North Atlantic Publishing Systems, Inc.; 9 Acton Rd., Ste. 13; Chelmsford, MA 01824; 508-250-8080 or 508-250-8179 (fax)

CopyFlow Geometry 2.0
Creates QuarkXPress layouts from ASCII files of geometry descriptions
Macintosh SE or larger; 2 MB of RAM; hard disk drive; QuarkXPress 3.1 or later.

CopyFlow Geometry can create QuarkXPress layouts, with text and art boxes in position, from ASCII files describing their geometry. CopyFlow Geometry can also append pages to existing layouts. New pages can be based on user-specified Master Pages. Text and art files can then be imported in new pages automatically as a batch process using CopyFlow, and the entire process — from creating layouts to filling text and art boxes — can be driven by Apple Events. Applications include newspaper, magazine and catalog page layout. CopyFlow Geometry is designed to link applications, such as PC News Layout to QuarkXPress.
$995 retail
North Atlantic Publishing Systems, Inc.; 9 Acton Rd., Ste. 13; Chelmsford, MA 01824; 508-250-8080 or 508-250-8179 (fax)

CopyFlow Reports 3.1
Reports to coordinate the activity of publishing workgroups
Macintosh SE or larger; 2 MB of RAM; hard disk drive; QuarkXPress 3.1 or later; CopyFlow 2.3.1 or later.

CopyFlow Reports is an XTension that uses CopyFlow to produce CopyFlow Report and CopyFlow Layout. These reports help coordinate the activity of publishing workgroups. CopyFlow Report produces an ASCII file of document status information. CopyFlow Layout produces a diagram of a document's text and art box geometry in a scaled-down spreadsheet format. The names of the boxes and editors are printed on the layout and the artwork can also be printed. CopyFlow Reports includes a Style Reporter that produces complete, configurable style reports for QuarkXPress documents and document templates.
$295 retail
North Atlantic Publishing Systems, Inc.; 9 Acton Rd., Ste. 13; Chelmsford, MA 01824; 508-250-8080 or 508-250-8179 (fax)

■ **CopySet**
Helps find and alter overset and underset boxes
Macintosh II or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

CopySet is an XTension that helps find and alter overset and underset text boxes. CopySet includes a palette that lists overset and underset boxes for the active document, letting users determine how much text is overset or underset in each story, and giving them the option to name the individual text boxes. With the click of a button a text box can be shortened or lengthened to accommodate the text it contains. CopySet also includes a feature that counts the lines, words and characters in a selected story. This feature also indicates whether or not a story is currently overset.

■ **COSMOS**
Storage and management server
Macintosh II or larger.

COSMOS (Client Object Storage and Management Server) tracks and manages large volumes of images, graphics and other electronic information used in graphic arts production. COSMOS integrates smoothly with existing workflows and equipment, and can be customized for a user's specific environment. COSMOS supports high-volume storage devices for short-term and archival storage, and ensures integrity and security information.

CouponXpress
Coupon production
Macintosh Plus or larger; 2 MB of RAM; QuarkXPress 3.0 or later; System 6.0.5 or later.

CouponXpress is a software program that integrates database publishing with coupon production. New software-extension technology makes coupon design effortless and totally error free. The bar-code database generates bar codes with the correct number system character, manufacturer number, family code, value code and supplementary codes every time. Clearing numbers are automatically assigned, printed and tracked by both market and media to pinpoint exact coupon redemptions. The picture database archives color-separation files for each product on magnetic storage devices (hard drive, optical disk or CD) to eliminate rescanning or manual stripping of product pictures. Low-resolution screen images are located automatically and CMYK files are copied into production folders for final printing.

CutIt 4.0
Stand-alone signmaking software
Macintosh Plus or larger; 2 MB of RAM; Adobe Type Manager 2.0.

Designed for the signmaking power user, CutIt is a powerful, but easy-to-learn, complete sign graphics system. It includes all the enhanced conversion/output features of MacSign Professional: key entry from the limitless library of supported Type 1 typefaces; import graphics from the limitless world of PostScript artwork; plot artwork on a single page or assemble multiple segments; selectable scaling with absolutely no scaling limits; complete color handling with automatic color separations; choose precision or automatic overlapping or perfect nesting of colors; automatic step and repeat option with tagging; engraving fill option produces reliefs in two axis milling; Engraving Tool Library supports dimensional and working features. CutIt extensions include: built-in text editor (compatible with all ATM Type 1 fonts); direct control over font, size, leading, kerning and alignment; text and artwork can be directly distorted, stretched, rotated and mirrored; automatic inline-outline of any text or artwork; precision measurement tool in inches, millimeters or centimeters; and zoom — includes five levels of magnification (200 to 1,000 percent).

CutServer
Computer-aided signmaking software
Macintosh Plus or larger; 1 MB of RAM; color recommended.

CutServer allows signmakers to have one computer process all files that need to be cut. When the file is ready to be cut, users send it to a computer across the network, which can handle plot jobs generated from FlexiSign. CutServer helps to simplify the process of cutting files from multiple computers. Using CutServer, users can send files from any number of computers to a single cutter. If there are several cutters on the network, multiple stations can be used. Files can be cut by queue order, color or priority. CutServer monitors inventory by informing users of the total media length needed for each color, as well as notifying them when to load new media.

Design ToolKit
Graphic library
Macintosh Plus or larger; CD-ROM drive.

The Design ToolKit CD-ROM supplies a professionally-designed, precisely-drawn graphic library. Users can create dynamic layouts, publications and presentations using any of the more than 1,600 editable black and white EPS and TIFF images and four fonts. The Design ToolKit contains art lettering, borders, dingbats, fonts, frames, full-page patterns/textures, labels, ornamental titles in a variety of styles, such as abstract, classical, didot, embossed, engraved, ethnic, familiar objects, Greco Roman, Koloss, Medieval, Nouveau, Renaissance and many others. All of these are easily accessible through the Aldus Fetch catalog, which is included.
$79.95 retail
Educorp; 7434 Trade St.; San Diego, CA 92121; 619-536-9999, 800-843-9497 (orders) or 619-536-2345 (fax)

Design ToolKit Pro
Graphics library
Macintosh Plus or larger; EPS-capable graphic editing or layout software; CD-ROM drive.

The Design ToolKit Pro CD-ROM is a two CD-ROM set that supplies a professionally-designed, precisely drawn graphics library of more than 3,800 images for desktop publishing, electronic color prepress, multimedia and presentations. Users can create dynamic layouts, publications and presentations with these editable black and white and color EPS and TIFF images. Four special bonus Type 1 fonts are also included. Design ToolKit Pro contains art lettering, borders, fonts, frames, full page patterns/textures, labels, tiles in a variety of styles and much more. All of these are easily accessible through the color thumbnail browser catalog.

Educorp; 7434 Trade St.; San Diego, CA 92121; 619-536-9999, 800-843-9497 (orders) or 619-536-2345 (fax)

Design Works
Graphic arts studio on disk
Any Macintosh; laser printer recommended.

Design Works is a graphic arts studio on disk, designed to make a user's desktop publishing more dynamic and successful. This growing collection of high-quality EPS clip art covers a range of topics, including full-page designs, brochure layouts and greeting headliners. Also featured is the complete collection of world universal signing symbols, each in three formats. The unique advantage, however, is that users can make requests — if an image is not available, Showker Graphic Arts & Design will create it. Users are invited to send sketches, ideas, clippings or company product photo slicks, and the company will create the graphics for their use on disk. The company can also "imbed" PostScript into Microsoft Word or other programs that do not support EPS files. Free information and a brochure are available upon request.
$19.95 retail
Showker Graphic Arts & Design; 15 SouthGate Ct.; Harrisonburg, VA 22801; 703-433-8402

Desktop Publishing CD-ROM 3.0
Clip art files, laser fonts, demos and more
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; CD-ROM drive.

Desktop Publishing CD-ROM contains more than 2,200 EPS clip art files; more than 300 laser fonts in Type 3, Type 1 and TrueType format; Educorp's Graphic Designs clip art volumes 1 through 5; Aircraft EPS graphics; Stamps of the World in color and gray scale; and utilities specifically set up for desktop publishing use. Also included are demos of various programs relating to desktop publishing. Desktop Publishing CD-ROM contains the Educorp CD sampler and a HyperCard browser that allows users to preview fonts, clip art, copy files and folders to a hard disk drive and perform a slide show for either clip art or fonts.
$99.95 retail

■ DP/Studio
Prepress production
Macintosh II or larger.

DP/Studio is a software package to manipulate images, scan, assemble pages, perform automatic trapping and merge desktop pages. DP/Studio provides the tools for complete prepress production combined with the power of a multitasking Unix workstation. This system allows users to meet production demands quickly, interface directly with ColorGetter scanners and ColorSetter imagesetters, as well as other input and output devices through industry standard protocols. DP/Studio offers many workflow options in a single product: QuickPage, for fast image replacement on layouts; AutoMerge and Trap, with user-definable automatic or manual trapping; and PowerStrip for complete electronic page assembly. Tools for color correction, sharpening and separation can be used with the ColorGetter scanner interface and with pre-scanned images. DP/Studio provides productive tools for retouching, compositing, editing linework, colorizing and data compression techniques for fast file handling. It links with desktop prepress and other high-end systems, ensuring smooth integration with existing workflows.

DPI Art-Scan Professional
Scanning software for line art, gray-scale and color originals
Macintosh with 68030 processor or faster; 8 MB of RAM; hard disk drive; System 6.0.5 or later.

DPI Art-Scan Professional is a scanning application for the Macintosh designed for use with the DPI Art-Getter 24- and 30-bit scanners, as well as the Agfa Arcus Plus, UMAX and Relisys scanners. These scanners are designed to scan line art, color and gray-scale originals. DPI Art-Scan Professional allows users to scan line art at very high resolutions and converts them automatically to PostScript art. This eliminates the need for redrawing original art work, saving users hours of time. Features include: scans directly to Adobe Illustrator EPS files; automatically rotates scans to straight positions based on the image's outline; able to zoom in on part of an image and then magnify it up to a full screen using screen or actual resolution; able to sharpen blurred images; preview full screen, even on two-page displays; virtually unlimited resolution; automatically sizes scan to desired output size; descreen tint screens and moray patterns; scans photos to 256 levels of gray; able to modify gamma setting to eliminate dark scans; and able to enhance highlights, RGB, midtone and shadow levels. Art-Scan Professional is an Adobe Photoshop Plug-In Module (PIM).

EGBook 1.6
Page-layout program in Japanese
Macintosh Plus or larger; 2 MB of RAM (4 MB recommended); hard disk drive; supports KanjiTalk 6.0.4 or later.

EGBook is a desktop publishing page-layout program in Japanese. As easy to use as a word-processing application, it supports vertical writing, find and replace feature, text importing and graphic importing. It comes with EGBridge. EGBook has a paste and link feature to work automatically with EGWord files. Graphics may be PICT, PICT 2, TIFF and EPSF. The program has basic drawing capabilities, can set kernings, enlarge fonts to 127 points and has header and footer features.

Ektron 1400-Series Plug-In
Software driver
Macintosh II or Quadra family.

The Ektron 1400-Series Plug-In is a software driver that allows control of the Ektron line of scanners through Adobe's Photoshop image editing package. This easy-to-use, menu-driven software module provides the following features: automatic calibration and color balance; preview and detail modes for selection of area of interest; resolution selectable up to 4,096 by 4,096 pixels; 24-bit color, 8-bit gray-scale or 1-bit line-art scans; and 36-bit to 24-bit logarithmic compression makes it possible to use the full radiometric capability of the Ektron line of scanners.

■ **Electronic Border Tape**
101 decorative borders and frames
Macintosh Plus or larger; 5 MB of RAM; QuarkXPress 3.0; System 7.0 or later.

Electronic Border Tape is a collection of 101 decorative borders and frames for the QuarkXPress power user. The designs from EBT will give users' work a polished, professional look. They range from simple and elegant to fancy and flashy; and some are just visual fun. There are also designs appropriate for all the major holidays.

■ **Epilogue**
Translates all types of PostScript and EPS files
Macintosh with 68020 processor or larger; 12 MB of RAM; 120 MB of free hard disk space; System 7.0 or later; Adobe Photoshop 2.0 or later recommended.

Epilogue is exciting and functionally important because it allows users to translate all types of PostScript and EPS files, including QuarkXPress and FreeHand EPS files. It is a complete, Adobe-certified PostScript interpreter and overcomes all the limitations of the EPS Rasterizer within Adobe Photoshop. RIP resolution and virtual page size is limited only by available hard disk space. Epilogue allows for complete PostScript-based production workflow when used with other Macintosh applications. The Epilogue package includes: the Epilogue Server, which is the network-accessible software-based PostScript interpreter; Epilogue PS, the Adobe Photoshop plug-in module; and the Epilogue FASTview application that allows users to preview PostScript and EPS files.

EPS Exchange 2.0
Allows FreeHand drawings to be exported for use in Illustrator 88 and Illustrator 3
Macintosh Plus or larger.

EPS Exchange is a software utility that provides a complete bridge between the two most popular Macintosh PostScript language illustration programs: Aldus FreeHand and Adobe Illustrator. EPS Exchange extends the functionality of Aldus FreeHand 3 by providing the ability to open, as well as generate, Adobe Illustrator 88 and Adobe Illustrator 3 documents. Users can increase their productivity and creative potential by using both PostScript drawing programs to create a single design.

Handcraftedfonts Co.; PO Box 14013; Philadelphia, PA 19122

Evolution 2.0
True Type font conversion utility
Macintosh Plus or larger; hard disk drive.

Evolution is a multiformat font conversion utility that puts sharp, easy-to-read display text for all fonts at a user's fingertips, in the format of their choice. Users can easily convert between TrueType, Type 1 PostScript and Type 3 PostScript. Type 1 fonts produced by Evolution are completely compatible with Adobe Type Manager, and both Type 1 and TrueType fonts are System 7 ready. The capability to convert between font formats means that any font can be printed on any printer. Evolution does not rely on a PostScript printer to process a font, enabling it to run on any Macintosh or Macintosh network.

■ **Exposé**
Create catalog of graphics files
Macintosh II or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

Exposé does the tedious part of cataloging graphics files. With Exposé, creating a catalog of graphics is simple and very flexible. Users build a QuarkXPress master page that will be used for each page of the catalog. Through Exposé preferences, users choose whether to include the full path name, the date the graphic was most recently modified, the file size, the file type and the fonts embedded in any EPS files. Users may also choose to have the graphic scaled to fit the box in the catalog. Users tell Exposé where to find the graphics for the catalog and the XTension imports all graphics in the designated folder or folders, adding information requested through the preferences dialog.

FilmSaver (Mac)
Groups and rotates PostScript pages from desktop publishing and typesetting products
Macintosh SE or larger.

FilmSaver is a software program designed to group and rotate PostScript pages from desktop publishing and professional typesetting products so that when output, the full width of the imaging material is used. By grouping the pages and rotating them, landscape or portrait to fit the width and imaging depth of the device, FilmSaver makes more economical use of the material while also saving on imaging time. Time is saved because laser imagesetters record across the width of material at the same speed regardless of the data being imaged; the time it would take to image an entire job is cut in half if as little as two pages are put up across the width of the imagesetter. FilmSaver supports 54 publishing packages, including PageMaker, QuarkXPress, Ventura, Adobe Illustrator and FrameMaker.

FlexiCut
Computer-aided signmaking software
Macintosh SE/30 or larger; 2 MB of RAM; hard disk drive.

FlexiCut can open/merge files from Illustrator, FreeHand, LetraStudio, Canvas or TypeStyler. It automatically layers colors and uses Beziér curves to maintain smooth curves and sharp corners for precision cutting. FlexiCut comes complete with border and magnifying tools and included a vinyl library that lists major vinyl vendors and their product lines. For layout purposes, FlexiCut can show gridlines and features "snap to grid" so everything is aligned to specified grid. Objects can be scaled, mirrored and rotated. When scaling, one dimension can be reset and the other will resize proportionately. FlexiCut has a variety of registration marks with specifiable sizes. Automatic Cutting cuts either the active color or all color layers, and Automatic Paneling puts a weeding border around any color layer. Unlimited split lines in both horizontal and vertical directions can be dragged to any position. When preparing to cut, different panels can be X'd out, saving vinyl. FlexiCut's print feature automatically fits a design to a page for impressive presentations. A built-in tutorial guides users through FlexiCut's computerized signmaking. FlexiCut can be upgraded to any Flexi, computer-aided software including FlexiLetter, FlexiSign, FlexiSign Plus and FlexiSign-Pro for professional signmakers.

FlexiSign-Pro
Full-featured graphical design program
Macintosh SE/30 or larger; 12 MB of RAM; hard disk drive; math coprocessor.

FlexiSign-Pro is a full-featured graphical design program that incorporates full-scale layout features with powerful creation tools. An industry leading raster-to-vector conversion utility anchors a solid palette of useful and extensive tools. Import and export to/from all common file formats. FlexSign-Pro seamlessly integrates complete drawing and editing tools, color layering and separations, object and character alignments and scaling tools into a user-friendly interface. FlexiSign-Pro also includes a vinyl color library and 70 specific built-in plotter/cutter drivers. Once created, designs can be output to vinyl signage, films for screen printing, sandblast masks, heat transfer flocks and color comps. Interactive control of the plotter includes automatic and manual paneling, plot by color, registration marks, rotations and step & repeat. FlexiSign-Pro is available for Macintosh, Power Mac and PC computers. It comes equipped with 600 Type 1 fonts, ATM, and 600 clip art images, a 30-day money-back guarantee, and one year of toll-free technical support.

■ **FlexScale**
Allows scaling at output
Macintosh II or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

FlexScale allows a QuarkXPress document to be scaled when it is output to a printer. The vertical and horizontal scaling percentages are independent from one another. The document can be scaled between 50 and 150 percent. To use FlexScale, users hold down the option key while selecting the Print command and enter the desired scaling percentage into the FlexScale dialog. The scaling percentages do not have to be identical. However, they must be between 50 and 150 percent. The scaling percentages can contain a decimal — the percentage sign is not mandatory. Users click on the Print button to continue the printing process or click on the cancel button to stop FlexScale. After clicking on the Print button, the printing process continues normally except that the output is scaled.

■ **Fontasy**
Access character fonts from palette
Macintosh II or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

When users are in QuarkXPress and need to access a dingbat or an unusual character in one of the fonts, they can turn to Fontasy. Fontasy lets users access all of the characters of a font from a convenient palette. With the Fontasy XTension, users can add a character to their document with a click of the mouse, then go back to work instantly. Fontasy displays characters from a font two different ways. A scrolling window lets users scroll through a list of the characters for selection. For the quickest access to all of the characters in a font, a small dialog displays a whole character set at once so users can pick out the character they need. To insert a character in a document, users just click on the desired character, either in Fontasy's scrolling list or in the

These Products Available Through Bottom Line Distribution
1-800-347-1923

character display dialog. The character is automatically inserted wherever the text cursor is in QuarkXPress.

FontChameleon
Lets users build billions of different fonts from one master font outline
Macintosh Plus or larger; 2 MB of RAM; floppy disk drive and hard disk drive; System 6.0.7 or later.

FontChameleon lets users build billions of different fonts from one master font outline. Users simply click on the font they want and the format they want to try their font in — PostScript Type 1 or TrueType — and FontChameleon will do the rest. FontChameleon lets users blend between any of the fonts in its extensive font selection listing. FontChameleon's features include: preset font selections, exceptional font quality, customize and blend between fonts, match an existing PostScript font and cross-platform support.

FontMonger 1.5.9
Font conversion and modification utility
Macintosh Plus or larger; 1 MB of RAM; two floppy disk drives; System 6.0.2 or later.

FontMonger incorporates significant advances in font conversion capabilities. It can convert font files in any direction between Adobe PostScript Type 1, Adobe PostScript Type 3, Nimbus Q and TrueType. In addition, it also converts font files from Agfa Intellifont, LaserMaster LXO and Corel Corporation's WFN into any of the other formats. Fonts can be converted from and written for the Macintosh, IBM PC and compatibles and NeXT platforms. FontMonger has a streamlined batch conversion feature that automatically locates all the fonts on a user's hard disk and prepares them for conversion. It uses the outline files of the font; screen font files are no longer required. Additional user interface improvements include a resizable keyboard and alter character window; and a character chart display that shows the font in a 16 by 16 matrix. FontMonger also includes a sophisticated set of drawing tools that enable the creation of character outlines from scratch or enable existing font outlines to be modified. Outline editing tools include a pen tool for drawing outlines; a scissors tool for adding or deleting points; a unique "gizmo" tool that lets outlines or outline segments be rotated, slanted or skewed; and a "merge outlines" feature that automatically removes overlapping outline segments.

Fontographer 4.0
PostScript and TrueType font editor
Macintosh with 4 MB of RAM or larger.

Fontographer is the easiest way to modify and create typefaces. Fontographer allows users to open and edit PostScript and TrueType fonts, make their changes and then create new ATM-compatible PostScript and TrueType fonts. Users can even open and create PC-Windows PostScript and TrueType fonts. Users can use Fontographer to easily bring in scanned images for auto-tracing or create new typefaces automatically with Fontographer's Change Weight feature. Users can even blend two typefaces to make a third. Best of all, Fontographer has a complete tool palette of object-oriented drawing tools, including squares, circles, multigon tool for creating many-sided figures, ruler tool and even a calligraphy pen. With Fontographer, it's easy to add signatures, fractions, special symbols and logos to a user's favorite typefaces. Other Fontographer features include automatic hints, an integrated bit-map editor, Multiple Master support, a spacing and kerning window, Auto Space and Auto Kern commands.

FotoTune
Color management software
Macintosh II family.

FotoTune is the color characterization member of Agfa's Color Management system. FotoTune defines the color characteristics or color gamuts of any color device (RGB input, monitor, output). FotoTune includes generic tags for Agfa scanners, printers and monitors and enables end users to generate customized ColorTags for their input devices (scanners). These ColorTags can then be combined to form ColorLinks between the devices.

Fræmz
101 decorative borders
Macintosh Plus or larger; 5 MB of RAM; PageMaker 4.2; System 7.0 or later.

Each Fræmz library is a collection of 101 decorative borders that range from fancy and flashy to just visual fun. Fræmz Library I contains general purpose borders (like a lot of the old border tape), holiday, hearts, musical notes, arrows, rope, circles, squares, boxed, diamonds and the infamous coupon border. Fræmz Library II contains banners, certificate, parchment, bubbles, sporting, southwest, environmental, cats, butterflies, dolphins, more animals, children's, more musical notes, happy faces, computer, cards, wedding and more holiday borders. Fræmz Library III contains geometrical, Greek, oriental, picture frame, note pad, railroad track, fancy corner, stars, crosses, more arrows, fancy circles and squares, male and female signs, yin/yang and a handicapped access border.

Full Auto-Frame Trapping
Professional trapping software
Macintosh IIfx or larger; 8 MB of RAM; 150 MB hard disk drive.

Full Auto-Frame is professional trapping software for the Scitex/Macintosh computer-based RIP, which automatically creates traps between color areas on a page. Trapping PostScript files from any PostScript-generating workstation (Apple, IBM, Sun, etc.) or desktop application (QuarkXPress, Adobe Illustrator, Aldus PageMaker, Aldus FreeHand, etc.), Full Auto-Frame is application-independent software that can be used as either an interactive or automated production tool. By employing a set of user-controllable parameters, which determines when a trap is needed, whether a spread or a choke is required, the tint values and the trap widths, Full Auto-Frame creates overlaps and underlaps automatically. As a production option, Full Auto-Frame can be bypassed or a different set of parameters applied to each file.

■ **Grid Master**
Creates equally-spaced grids or picture boxes
Macintosh II or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

Grid Master is an XTension for QuarkXPress that creates equally-spaced grids of text or picture boxes two ways. The XTension can create boxes or grids of boxes in a defined area when given the number of boxes and gutter width across and down. Grid Master lets users fill an area with equally-sized and spaced boxes, or they can create a grid of boxes of a size they choose. Users create a prototype box, then tell Grid Master how many boxes to create in the grid across and down, and specify the gutter width. Grid Master creates new boxes from the prototype created, generating a grid of boxes automatically.

■ **Guide Master**
Assists in control of QuarkXPress page guides
Macintosh II or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

Guide Master offers users control over their standard QuarkXPress page guides. The XTension lets users control the color of the standard page guides and also provides three custom-colored page guides so they can see the layout of their guides at a glance. Users can print out a list of guides in their document or lock them in place. Additionally, an entire spread of guides may be saved to a data file for later use. The grid utility automatically creates an even grid of page guides. Users can create a grid of guides by specifying the interval between the guides, or an area can be divided evenly with a user-defined number of guides. Guide Master also includes an item guides feature that enables users to effortlessly create four guides along the sides of a selected text or graphic box.

Helios OPI
Desktop publishing document server and printing enhancement system
Macintosh Plus or larger; System 6.0 or later.

Helios OPI (Open Pre-press Interface) is a high-performance desktop publishing document server and printing enhancement system based on Unix computers that have been equipped with EtherShare. Helios OPI server creates small layout images (up to 10 percent of original), which are sent from the server in place of the full-color files to a user's DTP package. These images contain all the image information necessary to view, place and crop a DTP document. OPI is a standard developed at Aldus Corp. to reduce layout, placement and printing wait time. Helios OPI server also provides full support for Quark's Desktop Color Separation (DCS) standard. Helios OPI server allows direct access to DTP files that are based on TIFF and EPSF. In contrast to other systems, the Helios OPI server performs all cropping within the OPI server — not within the print engine — further reducing print time. Helios OPI server runs as a separate set of processes under Unix. The full functionality of the Unix host is always available to other applications, and support for multiprocessor CPUs is automatic. Helios OPI server's companion product is EtherShare, which provides the file and management interface for the PostScript print spooling services.

■ HyphenSet
Makes hyphenation and justification settings simple
Macintosh II or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

The HyphenSet XTension makes the intensive work of getting letter spacing and word spacing less stressful by saving users some of the steps QuarkXPress forces them to perform to use and manipulate the Hyphenation and Justification setting. With HyphenSet, applying an H&J setting is as easy as a click of the mouse button with the convenient HyphenSet palette. The HyphenSet palette displays a list of all of the current document's H&J settings; users just click on the one they want. HyphenSet also makes it easy to access the H&J Settings dialog. Instead of mousing up to the menu bar to find the menu command, users simply hold down the command key and click on the HyphenSet palette. The H&J Settings dialog appears immediately. HyphenSet makes it easier than ever to produce the finest-looking documents with QuarkXPress.

ImPress
Automates the task of stripping QuarkXPress pages into signatures
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; QuarkXPress 3.1 or later.

ImPress automates the task of stripping QuarkXPress pages into signatures. It automatically imposes pages into a variety of standard signature arrangements, including sheetwise, work-and-turn and work-and-tumble. All positioning and rotation of pages is handled automatically in a separate document, leaving the original document intact. Full editing capabilities are maintained in the original document, allowing the "ImPressed" document to be saved to disk or printed using the various print options available from with QuarkXPress. Capable of handling very complex signatures, ImPress remains quite simple to operate. All variables, such as style of signature, output device and collation method are presented in one easy-to-view dialog box. Users requiring control over page creep and bleed values, as well as fold and trim tolerances, may set these values directly. ImPress not only creates signatures, but also reduces media costs by efficiently ganging multiple pages on a single spread. In addition, ImPress provides a "Print Area" function that allows users to print specific portions or selected items from a page. Changes to documents are made much more efficiently by not burdening a user with the overhead required in printing entire pages.

Imprint
Multilingual word processing and page composition package
Macintosh Plus or larger; 1 MB of RAM; hard disk drive.

Imprint is a multilingual word processing and page layout application. It offers all conventional word processing and page layout features present in such packages as PageMaker and Ready,Set,Go! What distinguishes Imprint is its ability to provide this power in all languages and scripts available on the Macintosh. Imprint, which supports text entry in left to right, right to left, top to bottom and bottom to top modes, allows users to create pages that combine such diverse languages as Chinese, Japanese, Hebrew, Arabic, English, etc. Imprint provides an array of tools to create, mix and manipulate text, graphics and picture objects. Text can be made to wrap around from any or all sides. Imprint is also available as language-specific versions — Chinese, Japanese and Arabic. In these language Imprints, users have a choice of menus and all commands appearing in that particular language, rather than in English. These also offer several features, like extendible keshidas, Chinese word break table, etc., which are absolutely language specific.

Incubator Pro 2.0
Allows users to create their own PostScript Type 1 or TrueType fonts from their existing font library
Macintosh Plus or larger; hard disk drive; System 6.0.5 or later; Apple TrueType INIT.

Incubator Pro is a fast and easy way to add thousands of combinations of high-quality PostScript Type 1 or TrueType fonts to the Macintosh. It will modify any Type 1 or TrueType font and save it in either format. Users can modify a Type 1 and save it as a TrueType font or vice versa. Or, use Incubator Pro to simply convert fonts from one format to another. Incubator Pro allows users to redesign an existing typeface by quickly adjusting any of seven typographical controls: weight, width, contrast, slant, x-height, descender and tracking. When the font looks the way a user wants, they name it, select the format and it is saved, independent of the original font. This new font can then be used in a user's favorite Macintosh program. Incubator Pro has Exact-Match, the ability to apply .AFM metrics files from one typeface to another.

■ IndeXTension
Creates indexes of words and phrases from QuarkXPress
Macintosh II or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

IndeXTension is an XTension that creates an index of words and phrases from a QuarkXPress document or documents. IndeXTension allows two different kinds of index markers to be added to QuarkXPress documents. One kind of index marker is an inclusive entry, which indicates a word or phrase found in the text should appear in the index. The second kind of index marker is a general entry, which allows users to create an index entry that uses words not found in the document's text. Users can use a general entry to create an index entry of "Ship" when the only reference actually found in the text is to "The Queen Elizabeth II." Index markers can be viewed in the text of a document. The markers can also be hidden so that users can observe line breaks. Once index markers are in place, the document is ready to be processed. The XTension creates the index automatically.

InsertSpace
QuarkXTension
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; QuarkXPress 3.0 or later.

InsertSpace is a QuarkXTension that inserts space among multiple blocks of text on a line. This is accomplished by distributing the leftover white space at one or more locations within the line. InsertSpace allows users to automate many tab setting functions now performed by QuarkXPress. This aids in the creation of bulleted text items, headers and footers, as well as assisting users in building tables from data that has been imported from spreadsheet or database files. Users maintain full editing capabilities and the ability to modify up to 21 blocks of text.

Interleaf Publisher 3.6
Electronic publishing software
Macintosh II; 2 MB of RAM (or 5 MB when using Virtual 2.02 from Connectix); 40 MB hard disk drive.

Interleaf Publisher is document processing software that combines full word processing, sophisticated

These Products Available Through Bottom Line Distribution
1-800-347-1923

graphics and document management features in one easy-to-use product. It has all the tools needed for the full range of corporate publishing — from one-page letters to multivolume reports. Word processing features include: unlimited document length, automatic spell check, indexing, table of contents, multilevel numbering and outlining, automatic pagination, hyphenation, justification and cross referencing. Graphics features include: data-driven charts, free-hand drawing and the capability to import CAD drawings, photographs or scanned images. A gray-scale image editor allows users to pixel edit, zoom, crop, clone and adjust the contrast of the images. In addition, the images can be rotated, stretched, sized and combined with any other text or graphics elements. The software also lets users share and manage documents among members of a workgroup.

IslandChecker
Scans EPS files and reports information about the data contained in the file
Macintosh II or larger.

IslandChecker eliminates the costly process of preparing a file for output by allowing the tradeshop or service bureau to check an EPS file for all necessary fonts, embedded files and images prior to accepting the work at the front desk. IslandChecker scans EPS files and reports information about the data contained in the file. After loading an EPS file into IslandChecker, a log file and customer information form appears on the screen. This window displays comprehensive information regarding the contents of an EPS file. IslandChecker also accepts customer data regarding the intended output specifications and billing information. Once all of this information has been input, a hard copy of the report can be printed. IslandChecker also allows the service provider to confirm the output specifications desired by the client and include that information on a customers "job ticket."
$195 retail; single pack
$495 retail; 10-pack
Island Graphics Corp.; 4000 Civic Center Dr.; San Rafael, CA 94903; 415-491-1000, 800-255-4499 or 415-491-0402 (fax)

IslandTrapper 2.0
Creates high-quality object-based traps for all objects contained in a page
Macintosh Quadra with FPU; 32 MB of RAM; 8- or 24-bit monitor.

IslandTrapper's high-quality, object-based trapping technology is now accessible as a fully automated batch process that accepts pages, including EPS graphics, from other sources. IslandTrapper also adds the ability to automatically color separate trapped documents and output them directly to a wide range of imagesetters. The first external source by IslandTrapper's automatic batch trapping is QuarkXPress. Although QuarkXPress can trap elements generated by QuarkXPress itself, it cannot trap embedded EPS files, such as illustrations created by Adobe Illustrator or Aldus FreeHand. IslandTrapper solves this problem by enabling QuarkXPress users to easily create high-quality, object-based traps for all objects contained in a page, including embedded EPS files.

■ **JobSlug**
Keeps track of document revisions and versions
Macintosh II or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

JobSlug helps users keep track of document revisions and versions by placing a custom slug on their QuarkXPress document page. To add a JobSlug to a document, users create a new text box and execute a menu command. They then choose what information appears in the JobSlug. The information is updated every time users execute the QuarkXpress command so that the information in the JobSlug is current everytime they output the document. The JobSlug can include the first and last day and time a document was saved or printed; imported graphics; fonts used; colors used; and the name of the person who has been working on the document. Users can also create up to four custom fields in JobSlug to help them track whatever information they need to know about the document. Suggested users for these fields include client name or job number.

Kalimat 2.0
Arabic utility
Macintosh Plus or larger.

Kalimat is a powerful tool that has given users Arabic access to the most popular drawing programs, such as FreeHand, Adobe Illustrator, Photoshop and more. In addition to Arabic text entry capability that comes with Kalimat, Version 2.0 supports advanced borders creation that will not only benefit users of Arabic, but also help with all the Latin and non-Latin languages. This newly added utility will allow automatic generation of frames from border fonts, a capability previously not available on any of the above mentioned programs. There is a wide range of borders and frames that will satisfy all needs: from borders that have an oriental style to a user's own border and frame design that can be embedded in Kalimat. Kalimat is compatible with the Latin System 7.0 or later, and users can take advantage of their own Macintosh Arabic fonts.

KEPS PCS100 Kit
Turns a Macintosh into a color workstation
Macintosh II or Quadra family.

Users can turn their Macintosh computers into color workstations with KEPS PCS100 Kit. The days of guessing about color on the desktop are over. Producing accurate, predictable and consistent four-color separations — at a low cost — is now a reality. With KEPS PCS100 Kit, designers, photographers, commercial printers or color service bureaus can receive precision color from start to finish — input to monitor to proof — every time. Users can create fast, accurate and predictable color separations and proofs on their existing Macintosh II family or Quadra systems. With KEPS PCS100 Kit, KEPS has unbundled the hardware and software components that make up the industry-leading Kodak Precision Color Management System (CMS). KEPS PCS100 Kit gives users a professional color reference for viewing and editing color. KEPS has tools to custom-calibrate just about any off-the-shelf monitor, yielding a WYSIWYG imaging environment. The on-screen output simulation operates within standard Adobe Photoshop software. KEPS high-end color separations are field-proven throughout the graphic arts industry. PCS100 delivers that same quality and productivity demanded by PostScript service bureaus, color separators, trade shops, newspaper publishers and commercial printers, on a standard Macintosh desktop.
$11,700 retail
KEPS, Inc.; a Kodak Company; 164 Lexington Rd.; Billerica, MA 01821; 508-667-5550, 800-345-6649 or 508-670-6552

KEPS Professional Color Server XL
Full-function OPI server
Any standard RGB or CMYK TIFF input and standard PostScript output.

Successful electronic color publishing relies on a simple rule of thumb — move little data, as seldom as possible. However, in most shops, the requirement is to quickly move enormous amounts of data just about everywhere at once. The answer is Open Prepress Interface (OPI) serving to minimize data movement and speed a user's workflow up to 800 percent. And the OPI server that utilizes the power of Sun technology to handle from the most simple to the most advanced requirements — while providing a platform to new color technology — is the KEPS Professional Color Server XL. The KEPS Professional Color Server XL operates in color-calibrated Macintosh and non-color-calibrated Macintosh environments. In non-calibrated environments, the KEPS Professional Color Server XL is a low-cost, full-function OPI server. However, in calibrated environments using PCS100, users can choose to integrate any other calibrated KEPS product. For instance, users can move to Prophecy color workstations and use the PCS100 as remotes, or integrate KEPS Page Composer or page assembly station, eliminating stripping, the single biggest bottleneck in most shops. KEPS provides tremendous flexibility for future growth. Because the KEPS Professional Color Server XL operates in a referenceable CIE-based color space (the foundation of all future color technology solutions), users can take advantage of new products as they become available, such as batch Photo CD processing and Print Photo CD.
$55,000 retail
KEPS, Inc.; a Kodak Company; 164 Lexington Rd.; Billerica, MA 01821; 508-667-5550, 800-345-6649 or 508-670-6552

Kodak ColorSense Color Manager
Simplifies color management for desktop presentation, publishing and design
Macintosh LC, LC II, SE/30, II or Quadra; 4 MB of RAM; hard disk drive; 8-, 16- or 24-bit video card; System 7.0 or later.

The Kodak ColorSense Color Manager provides true color balance across an entire Macintosh computer system, in one complete and affordable solution. Now the colors users see on their monitor will match the colors originating from scanned photographs, transparencies or Photo CD. And the color output from a printer will match, too. This easy-to-use software application also includes a hardware tool that calibrates monitors for consistent screen display over time, and a scanner target for scanner calibration.

Label Designer
PostScript desktop publishing program
Macintosh Plus or larger.

Label Designer is a PostScript desktop publishing package that handles text, graphics and sequentially-ordered numbers or bar codes. Text, graphics and bar-code information can also be imported from most popular databases. Label sizes and layouts are user definable for laser printing on any type of label stock. Label Designer also features built-in step and repeating, and the capability to factor disproportioning for pre-press applications. In addition to full text and graphics editing capabilities, Label Designer uses ComputaLabel's graphical technology to create accurate bar codes within specifications defined by standards bodies, such as AIM and the UCC. A UPC code, for example, can be adjusted in between 80 and 200 percent of the nominal size in .1 percent increments; code height is separately adjustable to allow for bar-code truncation. To ensure accuracy of the final printed code, Label Designer allows adjustments as small as .00004 inches to the bar width. Code 39, UPC and PostNet bar coding is included with the base package; optional modules include Code 128, Interleaved 2-of-5, EAN and ISBN bar codes.

LaserSeps
Photoshop export filter; creates process color separations
Macintosh Classic II or larger; 2 MB of RAM; hard disk drive; Adobe Photoshop or any software that supports Photoshop plug-ins.

LaserSeps is a Photoshop filter that creates process color separations specially designed to be output on standard laser printers, such as those sold by Apple and Hewlett Packard. Using a proprietary diffusion imaging model, LaserSeps gets around many of the difficulties associated with traditional and PostScript-based halftone separations. Because there are no screens involved, moire patterns and registration issues are less of a concern. This is of particular importance for textile and small press owners, because much of the equipment used is not designed for the demands of process color registration. Once installed, the LaserSeps command shows up in Photoshop's "Filter" menu. LaserSeps creates a file that can be printed directly from Photoshop or imported into other programs, such as QuarkXPress or Aldus PageMaker for inclusion in a layout. The LaserSep image is rendered in the same resolution as the original image.

LineWorker
Photoshop plug-in to import and export Scitex Linework files
Macintosh Plus or larger; Adobe Photoshop 2.0.1 or later.

LineWorker is an Adobe Photoshop Plug-In module that enables Adobe Photoshop for the Macintosh to import and export Scitex Linework files. LineWorker can be used to offload Scitex time, create linework masks, color fill and tint linework, edit colors of existing linework, save screen captures as linework and convert linework files to any Photoshop-supported format. Handshake Linework files that have been transferred from a Scitex System or PS/2 to a Macintosh can be imported into Photoshop, color filled, tinted and re-saved as Linework files. Any file that can be opened in Photoshop can be converted to Scitex Linework. Linework files saved from Photoshop via LineWorker can be transferred back to a system for assembly, trapping and then output to final film. Features include: import and export Scitex Handshake Linework files into Photoshop's Indexed Color Mode, sub-sample option when importing images for quick editing of color tables and a merge option for exporting the color table into an existing Linework file.

Linus-M
Automatic tracing program
Macintosh SE/30 with coprocessor or larger.

Linus-M is a powerful automatic tracing program with precise user-definable controls. It is ideally suited for graphic designers and production specialists who have a need to create high-volume, high-quality "electronic art" from scanned logo-types or complex graphics. Unlike other auto-trace software programs, draw capabilities reside within Linus-M, making the process of editing simple and expeditious. There is no need to export scanned files into another illustration-draw program for clean up. This advantage saves time, along with the cost effectiveness of not needing to purchase more software.

URW Software & Type GmbH.; 4 Manchester St.; Nashua, NH 03060; 603-882-7445, 800-229-8791 or 603-882-7210 (fax)

Logostormer!
Logo design and brainstorming program
Macintosh with 4 MB of RAM; hard disk drive; System 6.0.5 or later.

Logostormer! is a logo design and brainstorming program. It allows busy designers to quickly generate logos from a starter set of 100 icons and masking patterns. At least 10,000 logo combinations are possible, and users can add their own design elements to generate even more logo designs. Logos can be printed directly from Logostormer! or saved as a PICT file and modified further in a drawing program. Logostormer! images print sharply at the highest resolution of a printer (even on non-PostScript printers). LaserWriter 8 users can export logos in EPS format.

MacBarcoda
Produces commercial-quality bar codes in-house
Macintosh Plus or larger.

MacBarcoda is a desk accessory used to produce commercial-quality bar codes in-house. It allows users to create UPC, Code 39, Interleaved 2-of-5, EAN, ISBN and ISSN bar codes within specifications defined by official standards bodies, such as AIM, the UCC and the ANA. A UPC code, for example, can be adjusted in between 80 and 200 percent of the nominal size in .1 percent increments; code height is separately adjustable to allow for bar-code truncation. To ensure accuracy of the final printed code, MacBarcoda allows bar width reduction adjustments in increments as small as .00004 inches. The bar code is saved as an EPSF, which can be imported into a wide variety of design packages and printed on any PostScript device. MacBarcoda is also available in an Illustrator- and FreeHand-compatible color version.

ComputaLabel Inc.; 28 Green St.; Newbury, MA 01951; 508-462-0993, 800-289-0993 or 508-462-9198 (fax)

Macintize
Transfers Compugraphic MCS-coded files to the Macintosh
Macintosh Plus or larger.

Macintize translates files originally composed on Compugraphic MCS or Powerview typesetters into fully formatted documents for the Macintosh. These files may be updated and output on PostScript-equipped laser printers or typesetters. Macintize works in conjunction with the DaynaFile 5.25-inch disk drive that allows the Mac to read MCS or Powerview disks. Once an MCS file has been stored on the Mac, it may be translated to one of two different file types. MCS files that are mostly text will be converted to Microsoft Word format. MCS files that contain much ruling and less text, such as forms, will translate into MacDraw format where they may be easily refined and updated for future use from the Mac.

MacSign 1.10 For Macintosh
Sign making and engraving; delivers the power of PostScript to a cutting plotter
Macintosh Plus or larger; 2 MB of RAM; Adobe Type Manager 2.0.

MacSign is a powerful translator that converts any file created in most popular Macintosh graphics programs for use on the CAMM-1 and CAMM-2. MacSign can be used to output PostScript graphics on pen plotters, film cutting plotters and routing/engraving/milling machines. MacSign plots, cuts or engraves all EPS files. MacSign reproduces all Bezier curves with accuracy for smooth, accurate cutting and plotting. MacSign delivers the power of PostScript to a cutting plotter and engraver and provides these capabilities: enhance documents with any combination of popular typefaces; plot artwork on a single page or assemble multiple segments; selectable scaling — absolutely no scaling limits; color handling and color separation capability; and access a wide range of PostScript products, such as specialized typefaces, graphics libraries, illustrations, etc.

MacSymArt
Integrates desktop publishing and PostScript bar codes
Macintosh Plus or larger; 2 MB of RAM; System 6.0.5 or later.

To include bar codes in artwork on the Macintosh, users first create them in MacSymArt, then as EPS files, import them into popular graphics and publishing programs, such as Adobe Illustrator, QuarkXPress and PageMaker. Now layouts can include text, graphics and logos along with bar codes. MacSymArt calculates bar-code check digits or characters per inch automatically and lets users adjust symbol sizes (narrow bar, ratio, height) to accommodate a design. Users can choose between UPC-A, UPC-E, EAN 8, EAN 13, I 2 of 5, Code 3 of 9, Code 128, Pharmacode or Codabar and specify black and white output or color (C, M, Y or K). Users may also add supplemental codes, bearer bars and corner marks.

Managing Editor XT Pro
Lists text and graphics files in an items palette in QuarkXPress
Macintosh Classic or larger; QuarkXPress 3.11 or later (3.2 recommended).

Managing Editor XT Pro (MEXT Pro) automatically rounds up text and graphics files from specified folders from a network or hard disk and lists them in an items palette in QuarkXPress. Users just select an item, specify parameters and MEXT creates an XPress box with the text or graphic in place. Thumbnail views are available for both text and graphic elements. Associated Press captions can automatically be attached and grouped to graphics as they are placed. It will support references from picture catalog libraries like Fetch and Search, as well as receive general Apple Event references. MEXT Pro can launch both applications for easy perusal of catalog information. MEXT Pro now builds Page Director's Advertising, Classified and Editorial Layout System documents in XPress and tracks items from the program's runsheets. MEXT Pro then allows for the placement of unused runsheet items and tracks all placed.

■ **MasterMenus**
Provides easy menu item access
Macintosh II or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

MasterMenus provides an easy way for users to have commonly used menu items as close as a click on a custom palette. The MasterMenus Preferences dialog provides an easy interface that is used to build the custom palette. Horizontal and vertical scroll bars allow users to scroll through the menus to find which commands they wish were more accessible and a pop-up menu allows users to go directly to the desired menu. Adding commands to the palette is easy, and the width of the palette is up to the user. Users also have the power of choice over the way menu commands are listed in the palette. The MasteMenus palette is whatever users make it.

Matthco I
Enables users to create accurate bar codes in-house
Macintosh Plus or larger; 1 MB of RAM; System 6.0.5 or later.

Matthco I allows users to create accurate bar codes in-house, including UPC, EAN, Interleaved 2 of 5, Code 39 and Code 128. Users can design their bar codes with the precision necessary for all prepress applications to meet any printing or industry requirements. Bar width reduction, size and format are all user defined. Security checks are built in to avoid non-conformance to UCC and AIM published standards.

Matthco V
Enables users to create precise bar codes
Macintosh Plus or larger; 1 MB of RAM; System 6.0.5 or later.

With customer specific and user-definable style sheets, Matthco V allows users to create precise bar codes using fewer keystrokes and increasing data accuracy. Additional Matthco V features, such as bearer bars around the bar code and multiple lines of text, make it possible to meet major industry bar-code applications, such as the Shipping Container Codes (SCS) and Health Care Industry Bar Codes (HIBC) requirements. Bar-code languages supported are UPC/EAN, Interleaved 2 of 5, Code 39, Code 128 and Codabar.

Metamorphosis Professional 2.0
Converts PostScript and TrueType fonts into editable outlines
Macintosh Plus or larger; 1 MB of RAM.

Metamorphosis is a PostScript and TrueType font conversion utility that creates editable outlines and other font formats from existing fonts. With Metamorphosis, users can convert Macintosh PostScript-language and TrueType fonts into PICT outlines, convert Macintosh fonts into PC-Windows fonts, convert PostScript fonts to TrueType fonts and vice versa. Metamorphosis produces fonts and outlines that are identical to the outlines of the original fonts.

■ **The Missing Link**
Link text in QuarkXPress
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

The Missing Link adds features to the unlinking and linking tools. The Linking tool can be used to link text chains to other text chains that already contain text. The Unlinking tool can be used to duplicate a box that is part of a linked text chain. The duplicate box contains the text present in the original box.

MouseTrap 2.0
Trapping solution for PageMaker files
Macintosh II or larger; any color or gray-scale card (8-bit or better); PageMaker 2.0 through 5.x.

MouseTrap is an application that makes PageMaker files output with the traps that a pressman needs. Trapping is simple — users just point and click, graphics and type (everything that users create within PageMaker) elements can be trapped at any point setting desired. When finished, the files are kept in the traditional EPS format and can be imported into a separation program. The finished files can be printed at high resolution on any Adobe PostScript-language device. Features include: import any PageMaker EPS file and adjust traps for both text and graphic objects created within PageMaker; all traps are user-adjustable in .01 point steps; users can have as many (or as few) traps as desired; imports color TIFF, Adobe Illustrator and Aldus FreeHand files and passes the files through to Aldus PrePrint for separation files; creates trapped EPS files for use in various color separation programs; and easy-to-use graphic interface enables viewing the objects/text needing traps. MouseTrap is System 7 compatible.

■ **Navigator XT**
Navigate effortlessly through a QuarkXPress document
Macintosh II or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

Navigator XT is a palette that allows users to move through a QuarkXPress document effortlessly. The palette displays a thumbnail of the current page or spread. Clicking on a point in the thumbnail scrolls the document to the point where it was clicked. Features of Navigator include: available online help; displays pages or spreads; quick command key activation and hide; various page movements; quickly opens master page; palette resizes for page/spread size; optional page geometry display shows either wire frame geometry or a miniature of the current page or spread; and more.

NumberTag
Allows users to add number callouts to artwork
Macintosh Plus or larger; System 7.0 or later.

NumberTag is a specialty product designed for use by artists needing to number Exploded View artwork created in another application, or scanned in from disk. Similar in function to the Numbered Callouts tool within the Explode! application, NumberTag allows users to import artwork (in either EPSF or PICT formats), add the number callouts to the artwork file in a heads-up fashion and then export either the combined file or just the numbered callout tags as one of several file formats, PICT, EPSF or Adobe Illustrator, dependent upon the type of the original file imported for trace.

Airo Design & Manufacturing; PO Box 427; Port Washington, WI 53074; 414-284-7169

Ofoto Version 2
Scanning software for photographs and line art
Macintosh LC, SE/30, II or larger; 2 MB of RAM; 2 MB of available disk space (5 MB or more recommended); System 6.0.7 or later.

Ofoto makes it easy to acquire an accurate match to photographs, line drawings and artwork with the touch of one button. Users simply place the artwork or photo on the scanner bed and click Autoscan. Ofoto automatically determines if the image is a photograph or line art, sets the resolution and bit depth to optimize the resulting print, then straightens, crops and sharpens the image. Ofoto is like a good automatic camera that offers manual operation as well; any of the automatic features can be manually overridden if desired. Ofoto allows users to scale and rotate images easily without loss of quality or introduction of artifacts or distortions. It automatically eliminates moiré patterns that typically appear when scanning screened images. Out-of-focus or under- and over-exposed problem originals are no longer a problem. Ofoto can even fix photographs that have been taken with the wrong film.

Overset!
Saves users time fitting text to boxes
Macintosh SE or larger; 2 MB of RAM; hard disk drive; QuarkXPress 3.0 or later.
Overset! saves users time fitting text to boxes. When users click on an overset mark, Overset! creates a temporary text box that allows users to view overset copy. Users can then edit the copy or adjust the text box size to get the fit desired. the temporary text box will disappear when the text fits. If there is not actual copy, the temporary text box will turn on and off, signaling users that the overset mark is due to a return. When a document is stored, the temporary text box is automatically removed.

Page Geometry Software (PGS)
Allows users to configure the imagesetter for a particular job
Macintosh Plus or larger.
Page Geometry Software allows users to configure the imagesetter for a particular job. PGS lets users linearize the imagesetter's geometric response. Users can adjust the response along the imagesetter's horizontal and vertical axes. Users can scale responses independently on the imagesetter's horizontal and vertical axes. And, users can also offer an additional service: precise distortion of printers for use in flexographic printing. PGS is compatible with most popular imagesetters and RIPs.

■ **PageCopy**
Automates copying pages in QuarkXPress
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.
PageCopy automates the process of copying pages from one document to another and even allows easy duplication of entire pages within a document. The PageCopy dialog makes it easy to copy a few pages at a time by allowing users to choose from a list of open documents to specify a source document and pages, as well as picking a destination document and location in that document for the pages to be inserted. PageCopy also offers a batch copying feature that allows users to create a list of pages from various documents that should be copied, then the XTension executes the copy command all at once.

PageMaker 4.5 Japanese
Japanese version of PageMaker
Macintosh Classic or larger; 4 MB of RAM; Japanese Language Kit with System 7.1 or KanjiTalk 6.0.7 or later.
PageMaker Japanese supports all the features of the equivalent English version, such as importing from major programs and easy placement of many graphics formats. There are also some specifically-Japanese features, such as vertical text formatting, left-side page binding, kanji page numbering and furigana (small kana that indicate the proper reading for kanji characters). Users may open English PageMaker files with versions of PageMaker Japanese that are the same or later. A separate program for pre-press work is bundled with PageMaker Japanese. It comes with Japanese documentation.

PageMaker 5.0 For The Macintosh
Desktop publishing program
Macintosh Plus or larger (Macintosh SE/30, II family or Quadra recommended); 2 MB of RAM (5 to 8 MB recommended); hard disk drive; System 6.0.7 or later.
PageMaker integrates text and graphics, enabling users to quickly produce long documents by flowing text automatically through successive pages, formatting text with user-defined style sheets and updating source files by exporting their PageMaker documents to selected word processors. Graphics features include the ability to wrap text around both regularly and irregularly shaped objects, support for spot color and spot-color overlays, and built-in brightness, contrast and special effect controls for scanned images and bit-mapped (paint-style) illustrations. PageMaker also includes 20 ready-made templates to help businesses and organizations produce professional-looking documents quickly and efficiently. Automated options available to users include style sheets. The style sheets are available in three ways: users can create them in PageMaker, import a style sheet prepared in Microsoft Word or tag text in a word processing, database or spreadsheet program so PageMaker can create a style sheet automatically.

PageMaker Color Extension
Adds additional color capabilities to PageMaker
Macintosh Plus or larger; hard disk drive; PageMaker 3.0.
PageMaker Color Extension adds additional color capabilities to PageMaker 3.0. With the program, users can color text and PageMaker-drawn graphics, or import color illustrations saved as EPS files. Color Extension supports the full palette of Pantone colors, as well as the three industry-standard color models offered in PageMaker 3.0 (HLS, RGB, CMYK). Users can also import scanned color images saved in the Tag Image File Format (TIFF) and display them in 8- or 24-bit color, depending on the monitor.

■ **PageShot**
Save multiple pages as EPS files
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.
PageShot allows users to specify multiple pages to be saved as EPS files. Users can specify multiple pages either by page or by simply checking the "All Pages" check box. PageShot allows users to designate a certain area of the page to be saved as an EPS. This keeps the file smaller. It also allows users to save a text or graphic box as an EPS file.

■ **PartialPrints**
Print a portion of a QuarkXPress page
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.
The PartialPrints XTension lets users specify and print out the portion of an XPress page so they can see how that section looks on paper. PartialPrints lets users specify the area of the page being imaged by the X and Y origin of the area, as well as the area's width and height. PartialPrints also gives users the ability to save the portion of an EPS or PICT format graphic file.

■ **Patternz**
Gives users the ability to put almost any kind of pattern around text
Macintosh Plus or larger; 5 MB of RAM; PageMaker 4.2; System 7.0 or later.
Patternz is an Aldus Addition to PageMaker that gives users the ability to put almost any kind of pattern around text, from a simple line to eye-grabbing graphics. It provides up to 100 different designs in black and white; 80 of them are non-editable patterns covering a wide range of designs that users select and place. Users control the size, shape or thickness of a design and save it for future use. After choosing one of three shapes — square, circle or rounded corner rectangle — users select a pattern and then place it. The shape can be sized and saved, giving users a virtually unlimited set of options.

PlaceMat
Layout XTension for QuarkXPress
Macintosh Plus or larger; 4 MB of RAM; QuarkXPress 3.1 or later.

PlaceMat is a multi-object layout tool that works as an XTension to QuarkXPress. PlaceMat simplifies resizing and rearranging multiple objects. It has six modes that allow the user to "link" boxes and lines for resizing, so that changing the size of one causes corresponding changes to the size and position of the others. PlaceMat can be turned on or off and any scale/positioning mode can be selected from an easy-to-use palette. PlaceMat will scale or move any object on the page. It will also attract or repel relative objects, depending on the mode set. PlaceMat also provides an easy Undo for all its functions.

PlateMaker
Photoshop plug-in to export DCS 2.0 files
Macintosh Plus or larger; Adobe Photoshop 2.0.1 or later; QuarkXPress 3.2 or later.

PlateMaker is an Adobe Photoshop Plug-In module that exports DCS 2.0 files. The new specification for DCS from Quark, Inc. supports multiple plate color separations. With PlateMaker, it is now possible to export images of multiple plates utilizing the popular PostScript file format. The age-old problem of duplicating documents to create custom backgrounds can now be accomplished in a single procedure out of Photoshop. Color separations can easily be created to include additional channels for spot colors, PANTONE backgrounds, varnishes, foil stamping, embossing or any other special effect. Supported modes include CMYK, Indexed and Multichannel. Features include: full resolution composite for output to color printers; single or multiple file DCS format separation; 8- or 24-bit PICT preview for greater accuracy in placement into page layout packages; apply clipping paths to individual separation plates to create hard edged masks; create underprint masks for printing on colored papers or textiles; and custom angles and frequencies for all plate separations exported.

PostScript To EPS Converter
Attaches a screen image to both raw PostScript files and files output using the Apple LaserWriter driver
Macintosh Plus or larger; 2 MB of RAM; hard disk drive.

T-Script's PostScript to EPS Converter attaches a screen image to both raw PostScript files and files output using the Apple LaserWriter driver. The T-Script EPS output retains the PostScript properties of accurate scaling and the ability to output the graphic at the highest resolution of the output device.
$495 retail
TeleTypesetting Co.; 311 Harvard St.; Brookline, MA 02146; 617-734-9700 or 617-734-3974 (fax)

PostScript To PICT Converter
Converts PostScript text and images into a high-resolution PICT file
Macintosh Plus or larger; 2 MB of RAM; hard disk drive.

This special T-Script driver converts PostScript text and images into a high-resolution PICT file up to 1,600 dpi. The popular PICT format is often used by slide imaging software. T-Script now addresses this need to allow high-resolution 35mm 24-bit slides to be printed from virtually any Macintosh application. T-Script achieves 35mm slide resolution up to 10,000 lpi. The PICT feature allows users to: create PICT files from PostScript files for use in non-PostScript applications; place graphics into "non-graphic" programs, including Microsoft Word, Claris MacWrite or any other program simply by using the built-in Scrapbook (or Clipboard) capability of the Macintosh; support importing of graphics into QuickTime; and print to non-PostScript printers.
$145 retail; up to 360 dpi
$495 retail; up to 2,400 dpi
TeleTypesetting Co.; 311 Harvard St.; Brookline, MA 02146; 617-734-9700 or 617-734-3974 (fax)

PostScript To TIFF Converter
Allows PostScript files to be converted into TIFF files
Macintosh Plus or larger; 2 MB of RAM; hard disk drive.

T-Script's TIFF Export feature allows PostScript files to be converted into TIFF files for use in applications requiring the TIFF format. Examples include: use in non-PostScript applications, such as creating a PostScript file in Adobe Illustrator and converting to TIFF file format for modification in Adobe's Photoshop or Digital Darkroom; high-resolution fax/modem (allows for transmission of images with greater than 72 dpi resolution); and high-resolution output to non-PostScript printer (any QuickDraw-based printer, such as a film recorder [slides] or other printer, for which no direct T-Script driver is available).
$145 (up to 360 dpi) to $498 (up to 2,400 dpi) retail
TeleTypesetting Co.; 311 Harvard St.; Brookline, MA 02146; 617-734-9700 or 617-734-3974 (fax)

Pow! Zap! Ker-Plunk! The Comic Book Maker
Design your own comic book
Macintosh Plus or larger; 1 MB of RAM (2 MB for color).

This program produces spectacular looking comic books. Users choose from a variety of paneled backgrounds and hundreds of pieces of clip art to begin their design. The clip art categories include classic comic book components: speech bubbles, sound and special effects, props, heroes and heroines. The characters available in this program display a wide range of emotions and expressions. The sequential printout option has a variety of page layouts ideal for that authentic comic book look. Comics can be printed in a variety of sizes from mighty miniature to the powerful poster size.

Preps
Imposition and stripping software
Macintosh II or larger.

Preps imposition and stripping software is a tool for use in the prepress operations of a commercial or in-house print shop, or by an on-demand printing operation. It performs electronic document assembly from multiple PostScript input files, lays out the pages as they are to appear on a press sheet or printer sheet and outputs PostScript file(s) in the proper format to drive printers, on-demand publishing printers, imagesetters or platesetters. Key features include: ability to mix PostScript files from multiple applications in a job, built-in color separator, ability to merge OPI linked files, font downloading, complex sheet layouts (unlimited pages of multiple signs and orientations and unlimited standard or uniform marks) and a wide range of support for output devices.

■ **Preview Editor**
XTension to assist in managing large volumes of QuarkXPress documents
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

Preview Editor gives users the flexibility to use an image browsing program, such as Aldus Fetch, as a tool to organize their QuarkXPress documents. Preview Editor makes this possible by attaching a PICT preview to documents. It works in the background, attaching and updating the preview to reflect the appearance of each document each time it is created or saved. Preview Editor lets users include a description and list of keywords. The description and keywords can be added automatically when the preview is attached to the document, or users can choose to enter or edit them individually for each document. The XTension can also make a miniature preview page to replace the standard XPress document icon in the Finder.

■ **Pricer XT**
Sets preferences for formatting prices in QuarkXPress
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

Pricer XT allows users to create a set of preferences for formatting prices in the text of QuarkXPress documents and then apply that price format to prices in the documents. Pricer XT applies the designated price formatting either to a single price or to every price in the document. Preferences allow users to choose whether Pricer XT formats all prices without pausing or whether they would like to individually confirm that each price should be formatted.

The Print Shop 1.3.2
Personalized cards, letters, banners, signs
Macintosh Plus or larger.

The Print Shop allows users to create greeting cards, stationery, letterheads, signs and banners. Features include a selection of clip art and abstract patterns used to create borders, backgrounds or logos; and several type styles available in a variety of sizes in solid, outline or three dimensional formats for personalizing messages. The program allows users to modify the ready-made designs or create their own.

The Print Shop Deluxe
Enables users to easily create and smoothly print high-quality greeting cards, signs, stationery, banners, calendars and posters
Macintosh with 68020 or larger processor; 4 MB of RAM; high-density hard disk drive; hard disk drive with 6 MB of free space; System 7.0 or later.

The Print Shop Deluxe enables users to create their own personalized designs or simply choose from hundreds of ready-made layouts to create dazzling documents, from professional-looking letterhead and greeting cards to attention-grabbing posters and banners. The Print Shop Deluxe includes more than 300 object-oriented graphics, hundreds of ready-to-use layouts, 30 TrueType fonts, plus support for additional TrueType fonts, including Type 1 (with Adobe ATM 2.0 or later). Text can be shrunk, stretched, rotated, flipped, scaled and customized into more than 3,500 combinations — all without "jaggies." Graphics can also be customized by adding colors, shading and other effects. Users can import graphics in PICT format or use the Exporter to convert Print Shop Deluxe graphics to EPSF and PICT formats for use in other applications. For users who want to build a library of additional fonts and graphics, Brøderbund also offers The Print Shop Deluxe Sampler Collection (artwork in themes such as sports, seasons, holidays, parties and celebrations); Business Collection (graphics, fonts and layouts suitable for business needs); and Comic Characters (more than 300 wacky graphics with personality).

PrintArea
Allows users to print specific items or a portion of a page
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; QuarkXPress 3.0 or later.

PrintArea provides a feature that has been unavailable since the release of QuarkXPress 3.1 — the ability to print specific items or a portion of a page. This feature proves invaluable during the process of designing and proofing a document. Changes to a document are made more efficiently by not burdening users with the overhead required in printing entire pages. Users specify the area they wish to print by selecting one or more items and letting PrintArea determine the X/Y coordinates for them automatically, or by entering the X/Y coordinates into the PrintArea dialog box directly. These dimensions may be changed at any time. PrintArea works equally well with all item types, including text boxes, picture boxes and lines, as well as grouped or multiple-selected items. Support is also provided for items that "bleed" off the page. Users who require the advanced printing options of QuarkXPress will find that PrintArea fully supports the standard QuarkXPress Print dialog.

Printbox
Text, layout and color image production system
Macintosh II; 4 MB of RAM.

Printbox is a complete, integrated, text, layout and color production system working in the PostScript environment. Printbox is based on new solution specific technology, purpose-built for the job of producing pages. The Printbox system handles a complete job, including input scanning, image control and text, layout and image integration ready for output. Input is via the Printbox Scanner, which is controlled by the Scan Manager, a heavily modified Macintosh. Images are worked on in the Printbox itself and image, text and layout integration takes place in a second modified Macintosh, known within the system as the Layout Manager. Printbox is color space independent and offers a sophisticated suite of color correction facilities. It also offers "on-line production" — true, genuine real-time, interactive page make-up — which means that every facility and element are online and editable at all times.

Printer's Apprentice Layouts
Page-layout templates
Macintosh Plus or larger; 2 MB of RAM.

With Printer's Apprentice Layouts, users can output more than 200 professionally-designed, colorful, camera-ready documents with a keystroke. They are compatible with PageMaker, QuarkXPress and Ready,Set,Go!/DesignStudio, and can be output to any PostScript laser printer or Linotronic. This unique collection contains a fascinating variety of layout templates, including 33 brochures, 14 newsletters, five flyers, 82 business cards, 35 letterheads, 48 envelopes and two business-reply cards. All templates are designed in accordance with real-world printing applications; crop, registration and fold/score marks are included. Documents can be output in multiples per page for accurate, economical film assembly and stripping. Documentation includes complete instructions, hot tips for use and reduced-size illustrations of all designs.

ProType
Professional publishing software
Macintosh II or larger; A/UX; 8 MB of RAM; 19-inch monochrome or color monitor; SCSI disk controller with 160 MB disk.

ProType is a professional publishing application designed to provide users with a complete set of tools to produce high-quality typography on PostScript printers and imagesetters. Sophisticated features include 6,084 kern pairs per font, four levels of whitespace tracking, spaceband control, real-time H&J, aesthetic rag control, formatting capabilities and complete integration of graphics. ProType's tabular capabilities allow complex forms, tables, columns and financial reports to be set, edited and justified with ease. Any element can be arbitrarily rotated and still be completely editable. Characters can be automatically and manually kerned. Spot color, color links and four-color separation capabilities allow users to import high-quality color images into ProType page files. Original or electronic artwork, line art, contone and halftone images can be integrated directly into a ProType page. ProType accepts TIFF, EPS and other image file formats. Images can be arbitrarily sized, shaped, cropped, rotated and adjusted for aspect ratio. ProType is provided with a toolbox that includes programs for data translation and adding fonts. Because ProType is Unix based, it is able to take advantage of a multi-tasking environment that allows complete access to the screen while background processes are running. Special features include signature imposition with rotation and complete editability, support of pi characters, code free WYSIWYG editing and the use of programmable keys. Additional items include batch pagination, foreign language prompts and foreign language hyphenators. Custom networking and integration and native language high-speed imagesetter drivers are available.

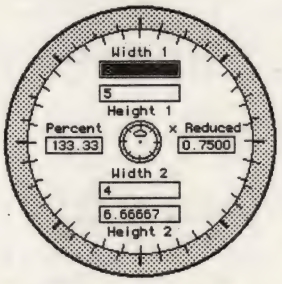
ProWheel DA
Desktop proportion and calculation accessory
Any Macintosh.



ProWheel DA is the software version of the standard-manual proportion wheel used by designers, printers, photographers, DTP people, newspaper and magazine photo managers. It is used to size original photos and artwork to a new size to fit into a printed piece. It accepts and converts the enlargement/reduction percentage of both the height and width of the photo/artwork from the original size to the new size. It also will calculate and convert between decimals, fractions, inches, centimeters, picas, points, DTP-Picas and DTP-Points. Because ProWheel is a desk accessory, it will pop up over any application program. Best of all, ProWheel never gets lost in a busy work area like its non-computerized counterpart.

Publication Administrator 2.0
Document management and tracking
Macintosh II or larger; 12 MB of RAM; hard disk drive; QuarkXPress 3.1 or later.

Publication Administrator is a client-server database for managing QuarkXPress documents. It uses the latest capabilities of 4th Dimension 3.0. This product monitors the creation and editing of an XPress document, updates the publication status of text and art box elements and controls access to documents. Publication Administrator is Apple Events aware, which lets other compatible applications query its database. The increased performance of Publication Administrator allows for the support of up to 40 clients from a single server. Publication Administrator has multiple access to QuarkXPress documents, and a module that displays the status of entire publications in graphic thumbnails. Publication Administrator lets two users share access to a QuarkXPress document at the same time. The new display module, Publication Administrator Views (PAV), presents all the pages in an XPress document in graphic thumbnails, with the status of page elements indicated by a unique color.

Publish It! Easy 3.0
Publishing program
Macintosh Plus or larger; hard disk drive recommended; System 4.2/Finder 5.0 or later.

Publish It! Easy includes page layout, word processing, graphics and typesetting tools with a built-in database/mail-merge program and exclusive slide-show feature. Features new to Version 3.0 include support for paragraph tags; multiple ruler guides; the ability to change specifications on grouped objects; an expanded tool palette with new tools for drawing grids, diamonds, arcs, Bezier curves, radial spokes and other shapes; and gradated fills for rectangles. The upgrade also offers support for color TIFF images with image controls for gray-scale and color PICT2 and TIFF images.

QuarkXPress 3.11 Japanese
Japanese version of QuarkXPress
Macintosh Classic or larger; 4 MB of RAM; Japanese Language Kit with System 7.1 or KanjiTalk 6.0.7 or later.

This Japanese edition supports all the equivalent English version features of QuarkXPress, such as advanced handling of color and the ability to open seven documents at once. There are specific Japanese capabilities, such as vertical text formatting, furigana (small kana that indicate the proper reading for kanji characters), left-side page binding and kanji page numbering. Users can open English QuarkXPress files directly with equivalent or later versions of QuarkXPress Japanese. The menus and dialog boxes may be switched between Japanese and English. It comes with Japanese documentation.

QuarkXPress 3.3
Integrated electronic publishing system
Macintosh Plus or larger; 2 MB of RAM (additional RAM recommended for color or graphics-intensive applications); hard disk drive; System 6.0 or later; LaserWriter.

QuarkXPress is a professional electronic publishing system that provides the precision, power and ease of use needed to produce a broad range of publications. It sustains creativity with a level of comfort that allows continual interaction with a design. A movable on-screen measurements palette allows changes in fonts, type size, kerning, tracking, leading and other attributes in increments as fine as .001 point, without ever having to use a menu or dialog box. The Library feature enables users to store frequently-used pictures and text for placement in any document at any time. QuarkXPress also offers precise typographical and layout control capabilities. The program accommodates type sizes from 2 to 720 points in .001 point increments; tracking and kerning to a tolerance of .00005 em space; and full text and graphic rotation to .001 degrees. Design options are increased with the many document composition features, such as a pasteboard work surface and retroactive master pages. Complete color support and the capability to import and manipulate all popular picture formats saves significant time and prepress expense. With complete word processing capabilities, QuarkXPress can serve an entire organization.

QuickScan
Prepress image acquisition software
Macintosh II or Quadra family; 5 MB of RAM; floating point processor; System 6.0.5 or later.

QuickScan is prepress image acquisition software. QuickScan drives the scanning functions of PixelCraft scanning systems, as well as other popular image scanners such as those from Microtek and Sharp. It is designed to optimize image data and deliver predictable color for maximum productivity without repeated rescanning. QuickScan applies Total Image Management to the scanning process, creating commercial-quality color, gray scale and black and white within an affordable, easy-to-use and productive environment. QuickScan operates as a plug-in module to PixelCraft's ColorAccess. QuickScan also functions as an Adobe Photoshop plug-in. It is also available for Windows.

RasterOps CorrectColor Management System
Ensures greater color fidelity between scanners, monitors and desktop color printing devices
Macintosh II or Quadra family; 8 MB of RAM; 24-bit display adapter and monitor; 32-bit QuickDraw; block mode display board recommended; RasterOps CorrectColor Calibration system; Adobe Photoshop 2.0 or later.

The RasterOps CorrectColor Management System (RCCMS) bridges the gap between desktop color device to ensure greater color fidelity between scanners, monitors and desktop color printing devices. RCCMS is a set of software tools based on the color management technologies of KEPS (Kodak Electronic Printing Systems). It consists of Device Color Profiles (DCPs), which are characterizations of desktop color devices describing how they reproduce color; the RasterOps Color Manager, which allows users to personalize their Macintosh system; and Adobe Photoshop filters, which allow users to perform color management functions. These filters ensure that the color users see on the screen matches the color output from the printer. Scanned images and printed output are corrected to more closely match the original on screen. RCCMS includes a starter set of DCPs. Additional DCPs and scanner characterization software can be obtained directly from KEPS.

Ready,Set,Go! 6.0
Page design software
Macintosh Plus or larger; 2 MB of RAM; hard disk drive.

Ready,Set,Go! offers a traditional approach to page design with all the benefits of the Macintosh. The program's electronic pasteboard lets users work freely at all stages of the design process. Editable thumbnails help visualize designs and explore creative options quickly and easily. Page designs can be created with customizable grids or using pasteboard guides. The program offers powerful type capabilities, including rotation of text to .1 degree, fractional point sizes, kerning and automatic text wrap-around. A wide range of word processing and text linking features, style sheets, glossaries and extensive drawing and graphics tools are provided. Ready,Set,Go! lets users incorporate color into their designs, using either the Pantone Matching System or full process color. The program includes Separator, which allows users to separate complete pages right from Ready,Set,Go!. Separator allows users to choose spot or process color for each object and allows users to specify printing options, such as knockouts and UCR for pure black. Users can also control printing of individual plates and line and dot screen specifications. Version 6.0 features object-oriented trapping, multiple master pages, gradient fills, EPSF export, automatic scaling of text and graphics, XTND support, automatic drop caps, floating tool palettes and a presentation module. It is System 7 savvy, with support for QuickTime, Apple Events and Publish & Subscribe (of formatted text and graphics).
$395 retail; unlimited free technical support through toll-free number
Manhattan Graphics Corp.; 250 E. Hartsdale Ave.; Hartsdale, NY 10530; 914-725-2048 or 914-725-2450 (fax)

■ RefleXTion
Flips objects in QuarkXPress
Macintosh Plus or larger; System 6..5 or later; QuarkXPress 3.2 or later.

RefleXtion can quickly flip a polygon horizontally or vertically. RefleXTion gives users the option to try the effect quickly to decide whether or not it fits their design. RefleXtion can even reflect an entire page horizontally or vertically with a single command. RefleXTion is accessed through a straightforward dialog that allows users to choose which direction they want to reflect the currently selected polygon, group box or page. Items can be mirrored across their veritcal axis, their horizontal axis or both. The XTension makes all the calculations and reflects the times, leaving text and pictures undisturbed in their respective boxes.
$49 retail
Vision's Edge, Inc.; 3491-11 Thomasville Rd., #177; Tallahassee, FL 32308; 904-386-4573, 800-983-6337 or 904-386-2594 (fax)

■ Resize XT
Resizes pages in QuarkXPress
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

Resize XT offers two ways to resize groups of page documents in QuarkXPress. Users just activate the Resize XT preference dialog to indicate how the group should be resized. Resize XT also adds the Resize Tool to the QuarkXPress tool palette. The Resize Tool may be used to drag the corner of a group to indicate its new size. Users can scale down the selected page elements as small as 20 percent of their original size; maximum size is determined by the size of the page. Users can enlarge items to any percentage that does not group items off of the page. Text sizes, paragraph rules, text indents, tabs and leading can be scaled. Lines and frames that are scaled retain their proportional widths.

RIPMaster
Phototypesetting system monitor
Macintosh Plus or larger.

RIPMaster, a software utility, resides on the Raster Image Processor (RIP) and provides information on virtually every aspect of jobs processed by the RIP and output on Linotronic laser imagesetters. Information, which is displayed on the screen of the operator's Macintosh, includes resolution, take-up and supply cassette volume, current job status, materials used and time spent processing a job. RIPMaster also pinpoints PostScript errors.
$495 retail
Linotype-Hell Co.; 425 Oser Ave.; Hauppauge, NY 11788; 516-434-2000, 800-633-1900 or 516-434-2706 (fax)

RipServer
Turnkey solution for high-speed PostScript rasterization in the Macintosh environment
Macintosh SE or larger (68040-based Macintosh recommended); 4 MB of RAM; System 7.0 or later.

The RipServer bundle is a turnkey solution for high-speed PostScript rasterization in the Macintosh environment. It combines Xinet's K-Spool or Aldus Print Central print spooler control software, with TorqueWare server software and 5D or Adobe Professional RIPs. As with all TorqueWare bundles, it is scalable from one to several SGI back-end processors. A variety of output devices are supported, including film recorders and Scitex CT file transfer. The system is designed as an open-architecture RIP environment, allowing the use of other RIPs, as they become available.
$4,500 starting price retail; software-only bundles
Torque Systems, Inc.; 825 Emerson St.; Palo Alto, CA 94301; 415-321-1200 or 415-321-1298 (fax)

Scitex Visionary Echo
Macintosh-to-Macintosh computer proofing system
Macintosh IIfx or larger; 8 MB of RAM; 160 MB of free hard disk space; 19-inch color monitor; System 7.0 or later.

Scitex Visionary Echo is a Macintosh-to-Macintosh computer proofing system that reduces proofing cycles. Utilizing standard telecommunications, compressed pages are transmitted to any remote site. At the remote site, transmitted files can be routed directly to an unattended IRIS 4012 printer for proofing. Proofs can be reviewed on a Macintosh computer and both parties — local and remote sites — will be able to view and annotate the file simultaneously via the telephone, improving communications.

Scitex XTensions
Accelerate page design and enhance quality
Macintosh II or larger.

Scitex has developed 14 QuarkXPress XTensions that accelerate page design and enhance quality. Scitex XTensions are packaged in eight different offerings. Previously offered only to customers, Scitex XTensions are now available as individual packages or as a bundled solution.
$69 to $199 per package retail
Scitex America Corp.; 8 Oak Park Dr.; Bedford, MA 01730; 617-275-5150 or 617-275-3430 (fax)

Series 1000
Complete electronic publishing systems
Macintosh Classic or larger.

Linotype's Series 1000 consists of six complete publishing systems ranging from entry-level text-only configurations to systems offering full process color capabilities. Linotype has researched emerging technologies, tested them carefully and integrated them into complete systems to provide reliable solutions. Macintoshes are used as the input workstations for Series 1000 and are combined with different monitors, scanners, printers and storage devices as necessary to produce jobs of varying complexity. Working with powerful text processing, graphics handling and page layout software, operators can produce simple newsletters or elaborate brochures. The workstations can be networked via LocalTalk or Ethernet. Jobs are proofed to color or black and white laser printers and output to a Linotronic 230, 300, 330, 500 or 530 laser imagesetter.
Call for pricing
Linotype-Hell Co.; 425 Oser Ave.; Hauppauge, NY 11788; 516-434-2000, 800-633-1900 or 516-434-2706 (fax)

SetInset II
Allows users to specify text inset values for QuarkXPress text boxes
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; QuarkXPress 3.0 or later.

SetInset II permits users to specify text inset values for QuarkXPress text boxes. The text inset value is the distance between the edge of the text box and the text within. Modifications to the text inset value were previously limited to one value for all sides of a text box. Augmenting the text box formatting capabilities found in QuarkXPress, SetInset II allows users to design pages with much more flexibility when used in conjunction with existing features, such as text indent, vertical justification and tabs. SetInset II allows users to enter a value using the measurement unit of their choice and offers decimal precision similar to that found in XPress. Recently updated, SetInset II is now implemented as a movable dialog and includes an Apply feature. Keyboard commands allow users to access the SetInset II dialog or apply user-defined inset values (in increments of 1/10x, 1x, 10x) directly to the active text box.
$29 retail
XTend, Inc.; 2215 Polk Ave.; PO Box 7273; North Brunswick, NJ 08902; 908-821-6400 or 908-821-6801 (fax)

SetSkew
QuarkXTension
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; QuarkXPress 3.0 or later.

SetSkew is a QuarkXTension that produces unique text effects from within QuarkXPress by skewing text boxes. This feature augments QuarkXPress' built-in ability to skew pictures. By combining the power of SetSkew with the existing palette of XPress tools, effects never before possible are now attainable. Text that is contained within a text box remains totally editable. Changing text attributes, such as typeface size, kerning/tracking, etc., remain possible. Paragraph formatting commands also remain in effect. Frames that encompass a text box preserve the correct angle of skew. Skewed text boxes maintain their link to other text boxes as well. In addition, SetSkew may be applied to any existing or newly-created document.

XTend, Inc.; 2215 Polk Ave.; PO Box 7273; North Brunswick, NJ 08902; 908-821-6400 or 908-821-6801 (fax)

■ Shadow Master
Create shadow effects in QuarkXPress
Macintosh Plus or larger; System 6.0.5 or later, QuarkXPress 3.2 or later.

Shadow Master is a quick and easy way to create shadow effects for objects without ever leaving QuarkXPress. Shadow Master makes drop shadows a snap. A dialog lets users choose the shadow's offset, as well as its color and shade. Three-dimensional shadows are easy with Shadow Master — users just set the offset and color, then use the convenient shadow orientation box to select which way the shadow should fall. Shadow Master even allows users to create shadows with gradiant blends, which means the shadow can fade away from the original box.
$49 retail

Simple Seps
Color separation software
Macintosh 512KE or larger; System 6.0 or later; laser or ink jet printer with 300 dpi or greater.

SimpleSeps brings the power of color separations to virtually every Macintosh, using any word processor or desktop publishing system and using almost any printer. Now anyone can print multicolor separations of newsletters, stationary, business cards, announcements, invitations, advertisements, etc., on their Macintosh, reducing printing costs. SimpleSeps is designed for two-color separations and adds three controls to every window: activation, print black layer or print color layer buttons. Users simply design their document using any two colors (usually black and another color), print the black layer, print the color layer and take the separations to any print shop to have it printed in any two colors. SimpleSeps works with almost every word processor, draw program or DTP system, including Microsoft Word, any Works product or other applications that have color text and graphics support, even on a non-color Macintosh.

Scanning, conversion and output software for sign making
Macintosh Plus or larger; 2 MB of RAM; Adobe Type Manager 2.0.

SketchArt allows users to import and combine QuickDraw and PostScript artwork and type into composite image files and then export those files to SketchMate or Imagecrafter for plotting or cutting. SketchArt also supports scanning using Stika's built-in scanner. Most popular illustration, design, text and productivity packages are supported, including Excel, Works, Illustrator, FreeHand, TypeStyler, LetraStudio and more. Users can enhance business and graphic design artwork with support for up to 32 colors of plotting pens; choose between .3mm and .6mm pen widths for thinner or thicker output. With Stika, users can scan an image using Stika's built-in scanner, import that scanned (bit-mapped) image into the Mac, trace and modify the image with applicable Mac software, then export and send the finished image file to the Stika for cutting or to Sketchmate for plotting or cutting.

Sonar TOC 2.0
QuarkXPress table of contents generator
Macintosh Plus or larger; 1 MB of RAM; QuarkXPress 3.1 or later; Sonar Bookends.

Sonar TOC is a table of contents generator for QuarkXPress 3.1 and later. It extends the capabilities of Sonar Bookends, Virginia Systems' index and table of contents generator. QuarkXPress users can now make a multilevel table of contents by marking each desired entry in their document using style sheets. The page numbers in the table of contents are in the same format as they are in the document, including any prefix information. The resulting table of contents can be imported into QuarkXPress or any word processor. User-marked entries can also be brought into Sonar Bookends for indexing.

SpectrePlug-In Color Correction
Color correction filter
Macintosh with 68030 or 68040 processor; math coprocessor; 8 MB of RAM; 24-bit color; 32-bit QuickDraw; Photoshop 2.0.1 or later; System 6.0.5 or later.

SpectrePlug-In Color Correction adds professional-level CMYK color correction capabilities to Adobe Photoshop. The plug-in sets up a color correction table with six primary colors and up to six user-definable ones. Users can modify this table and apply it to their image.
$295 retail
Pre-Press Technologies, Inc.; 2443 Impala Dr.; Carlsbad, CA 92008; 619-931-2695 or 619-931-2698 (fax)

SpectrePlug-In Unsharp Masking
Unsharp masking filter
Macintosh with 68030 or 68040 processor; math coprocessor; 8 MB of RAM; 24-bit color; 32-bit QuickDraw; Photoshop 2.0.1 or later; System 6.0.5 or later.

SpectrePlug-In Unsharp Masking adds professional-level RGB or CMYK unsharp masking to Adobe Photoshop. It applies the level users want of smoothing or sharpening, or both. Now users can simultaneously smooth a subject's complexion while sharpening hair and eyes.
$295 retail
Pre-Press Technologies, Inc.; 2443 Impala Dr.; Carlsbad, CA 92008; 619-931-2695 or 619-931-2698 (fax)

SpectrePrint Pro 3.0
Professional color correction and separation software
Macintosh with 68030 or 68040 processor; math coprocessor; 8 MB of RAM; 24-bit color; 32-bit QuickDraw; System 6.0.5 or later.

SpectrePrint Pro gives users professional color correction and separation controls that range from unsharp masking to UCR and GCR. It lets users individually adjust the tonal range and gradation of the four process colors and globally correct colors to compensate for scanner deficiencies and printing ink impurities. Users can precisely control neutral tones by correcting with the gray balance curve; and adjust for press gain and specify screen frequencies and angles. SpectrePrint Pro's monitor calibration assures that an image will look the same on screen as it will in print using the paper stock that users have chosen. The densitometer shows before-and-after color values, press again and total ink coverage in easy-to-read graphic and numeric displays for reliable, repeatable results. Users also can scan and separate in "batch" mode. Users can scan as many images as they can fit on their scanner and assign different specifications for each.
$1,995 retail

■ Starz
Create stars with three to 100 points
Macintosh Plus or larger; 5 MB of RAM; PageMaker 4.2; System 7.0 or later.

An Aldus Addition for PageMaker, Starz lets users instantly create stars with three to 100 points. Points can be of alternate heights. Users set the border, line thickness, fill them or leave them hollow and determine whether they want lines to connect the interior points of the star. All these options are available on one simple mouse-controlled screen. Starz also comes with a random generator that will automatically show thousands of unique, unduplicated stars. A complete color wheel with unlimited tints and shades for coloring the stars is included.

■ **Stylin'**
Set up style sheets easily in QuarkXPress
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

Users of Stylin' can set up their style sheets in QuarkXPress to make it easy to change the attributes of blocks of text. Applying style sheets can become a nightmare when the new style sheet overwrites attributes users wanted to remain in the text. Stylin' allows users to apply style sheets to text while preventing selected attributes of the text from being overwritten by the new style sheet. Stylin' includes a palette similar to the QuarkXPress Style Sheets Palette. The XTension provides a comprehensive dialog that allows users to exclude any combination of attributes from being applied to the text with a series of check boxes. Any setting of the check boxes can be saved for later use with the click of a button.
$99 retail
Vision's Edge, Inc.; 3491-11 Thomasville Rd., #177; Tallahassee, FL 32308; 904-386-4573, 800-983-6337 or 904-386-2594 (fax)

SymArt Pro
Film master manufacturing system
Macintosh Plus or larger; 2 MB of RAM; System 6.0.5 or later.

SymArt Pro offers users new ways to eliminate errors, reduce costs and administer PostScript bar-code production. New software breakthroughs organize and manage all bar-code symbol specifications for users — no more searching through records for all of a customer's requirements. Save and Open Formats creates a database of all the bar-code formats a company of clients use. Users may then select formats by name without worrying about technical bar-code specifications, text positioning and graphic positioning. Multiple lines of text, fonts, positions and sizes are now possible. Users can print film master styles on any page size without opening and positioning them in other application programs. All image emulsions (ND, NU, PD, PU) print on the same film like a checkerboard. Specifications, descriptions and corner marks can be printed automatically.

T-Script V3.4
Software raster image processor
Macintosh Plus or larger.

T-Script Basic allows users to output PostScript text and graphics from any Macintosh application. It drives a variety of non-PostScript printers, such as Fargo Primera, HP LaserJet, DeskJet, DeskWriter, PaintJet, LaserWriter SC, StyleWriter, Personal LaserWriter LS and ImageWriter, GCC PLP, Canon LBP and BubbleJet series. It supports TrueType, Adobe Type 1 and Type 3 fonts and 24-bit color. The T-Script application is Chooser accessible (under System 7). It includes PostScript LaserWriter-compatible fonts, PostScript editor and screen preview up to 600 dpi (gray scale and color), helpful in learning PostScript and previewing before printing. T-Script Basic is System 7 compatible.

In addition to the features of T-Script Basic, T-Script allows output from most any Macintosh application to be converted into high-resolution TIFF or PICT files. Users may request any resolution up to 360 dpi. This conversion supports monochrome, gray-scale and color output TIFF files useful for sending via fax/modem and for modification in such programs as Adobe Photoshop. The T-Script application works on an AppleTalk network and can function as a server to other machines. T-Script also supports high-end color thermal printers, continuous tone dye sublimation printers and film recorders.

In addition to the features of T-Script, T-Script Deluxe allows output to be converted into very high-resolution TIFF or PICT files. Users may request any resolution up to 2,400 dpi. This conversion supports monochrome, gray-scale and color output TIFF, PICT or EPS files useful for sending via fax/modem, for modification in such programs as Adobe Photoshop and for driving high-resolution imagesetters and film printers and a variety of customized applications. T-Script Deluxe can function as an offline raster image processor, reducing the amount of time the output device spends in processing the document and has the ability to batch process an unlimited number of PostScript files. T-Script Deluxe features substantial increase in speed of rastering, as well as a multiple PostScript page preview mode.

Tableworks Plus
Table editor
Macintosh Plus or larger; 4 MB of RAM; QuarkXPress 3.1 or later; 13-inch or larger monitor.

Tableworks Plus provides a complete set of features for automating the creation of professional tables in QuarkXPress. It operates as a QuarkXPress XTension, adding its own menu, palettes and dialogs for a complete table editing environment, yet allowing all of QuarkXPress' formatting abilities when editing tables. Table text may be formatted and edited in the same way as any other part of a document. Lines, background color and framing styles may be applied automatically. Picture cells and rotated cells at any angle are supported. Table cells can be merged and split to achieve any sort of table structure. New features include dynamic multipage support, slanted rows or columns, row and column rearrangement capability, direct import of Excel data, justified spacing between columns or rows and much more.

Tableworks ShortCut provides many of the base features of Tableworks Plus, including individual row or column resizing; auto-sizing during typing; alternate row shading and rules; import of tab-delimited text; adjustable table configuration; title bar; custom shading or framing; and more. Tableworks ShortCut can be upgraded to Tableworks Plus.

Vision's Edge, Inc.; 3491-11 Thomasville Rd., #177; Tallahassee, FL 32308; 904-386-4573, 800-983-6337 or 904-386-2594 (fax)

TextLinker
Publish and Subscribe for text in QuarkXPress
Macintosh Plus or larger; 4 MB of RAM; QuarkXPress 3.1 or later; System 7.0 or later.

TextLinker is an XTension that adds System 7 Publish and Subscribe capability for text in QuarkXPress. Publish and Subscribe allows data to be linked between documents and between different applications that support Publish and Subscribe. With TextLinker, users can Publish text from an XPress document to be used in other documents; or Subscribe to text from other documents. TextLinker can be used with Tableworks Plus, allowing users to designate entire tables as Publishers or Subscribers. Now, publishing information that is subject to change, such as price lists or databases, can be automated with TextLinker.

■ **TeXTractor**
Text extraction in QuarkXPress
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

TeXTractor is a comprehensive text extraction XTension for QuarkXPress. With TeXTractor, users can export all of the text in a document or selected portions of the text using any filter currently available to QuarkXPress. Users choose one of four options when text is extracted: all boxes, style, imported stories and tagged stories.
$149 retail

■ **Thesaurus reX**
Thesaurus for QuarkXPress
Macintosh Plus or larger; System 6.0.5 or later, QuarkXPress 3.2 or later.

Thesaurus reX is an electronic thesaurus of the English language for QuarkXPress. The XTension lets users look up synonyms in a 220,000-word thesaurus without ever leaving QuarkXPress — a valuable tool for users who are composing text within XPress documents. With Thesaurus reX, users can find the right word for their thought without taking their hands off the keyboard or their eyes off the screen. The thesaurus is as easy to activate and use as the XPress Check Spelling feature.

TheTypeBook
Professional-quality typeface reference
Macintosh Plus or larger; 2 MB of RAM; System 6.0.4 or later.

TheTypeBook combines the most popular elements from various Type Catalogs into attractive and efficient page designs. Each of the available layouts has been designed to provide an optimum balance for the information versus the resources required — time, paper and toner. They can work individually or in harmony with the others to create a reference tailored to a user's needs. Users just launch TheTypeBook, select the typefaces and click the print button. Each sample page is handled as a separate print job. This breaks up the number of fonts required. The list of installed typefaces is sorted alphabetically by font family name and subsorted by the weight of each member of the family. TheTypeBook supports all PostScript Type 1, Type 3 and TrueType fonts. It is compatible with virtually any PostScript or QuickDraw-compatible printer.
$45 retail
Golden State Graphics; 2137 Candis Ave.; Santa Ana, CA 92706; 714-542-5518

■ **TIFFormation**
Places TIFF files in documents
Macintosh Plus or larger; System 7.0 or later; QuarkXPress 3.2 or later.

TIFFormation XTension displays detailed information about imported TIFFs, including the resolution, compression and the embedded description. TIFFormation includes a TIFF Check feature, which helps users to determine the best lpi setting to use for output of the TIFFs imported in the document. Users can experiment with different settings. TIFFormation lets users view information embedded in a TIFF file by LeafDesk. The XTension also comes with a companion application that is used to move the embedded Leaf Tags from the data fork of the TIFF file so that the tags are not overwritten by photo-retouching applications.
$69 retail
Vision's Edge, Inc.; 3491-11 Thomasville Rd., #177; Tallahassee, FL 32308; 904-386-4573, 800-983-6337 or 904-386-2594 (fax)

■ **TimeStamp**
Applies unlimited time stamp to QuarkXPress documents
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

TimeStamp is an XTension for QuarkXPress versions 3.1 or later that allows users to apply unlimited time stamps to any document. The time stamps are automatically updated whenever the document is saved. Time stamps are useful to easily and accurately determine when a document was last revised. The time stamps can also include other valuable information about documents.
$49 retail
Vision's Edge, Inc.; 3491-11 Thomasville Rd., #177; Tallahassee, FL 32308; 904-386-4573, 800-983-6337 or 904-386-2594 (fax)

■ Touch
Creates libraries that include graphics in QuarkXPress
Macintosh Plus or larger; system 6.0.5 or later; QuarkXPress 3.2 or later.

The Touch XTension creates libraries that can include graphics, QuarkXPress documents and text files. When adding items to a Touch library, items from Fetch catalogs can be copied into the library or they can be imported from a folder on the hard drive. Once items are in a Touch library, the entries may be sorted by the order they are imported, by their file name, file type, volume or folder. Touch gives users the convenience of being able to restrict which file types show in the library at any given time. This XTension allows users to drag entries onto a QuarkXPress page for easy placement. Imported graphics can be automatically sized to their picture box, the enclosing box may be sized to fit the graphic image or the graphic may be imported at 100 percent scale.
$179 retail
Vision's Edge, Inc.; 3491-11 Thomasville Rd., #177; Tallahassee, FL 32308; 904-386-4573, 800-983-6337 or 904-386-2594 (fax)

Transverter
EPS to PICT vector translator
Macintosh Plus or larger.

Transverter translates EPS clip art into editable PICT files (QuickDraw). Now desktop publishers without PostScript drawing programs, such as MacDraw and SuperPaint, can use EPS clip art in their programs — no more gray tone clip art. Transverter lets users colorize EPS clip art in PowerPoint and Persuasion. Conversion into QuickDraw makes images compatible with most Macintosh applications and printed output looks great — even without a PostScript printer.
$29 retail
TechPool Software; 1463 Warrensville Center Rd.; Cleveland, OH 44121; 216-291-1922, 800-777-8930 or 216-382-1915 (fax)

Transverter Pro
Multifaceted tool for PostScript images and files
Macintosh Plus or larger.

Transverter Pro is a must-have utility for anyone working with PostScript files. Users can translate and import any PostScript file into FreeHand or Illustrator for editing, rasterize an image to high resolution for use in paint programs and translate PostScript files into editable images for QuickDraw applications, like MacDraw and SuperPaint. The program is a complete PostScript interpreter (EPS, AI, PS), translating files into PICT vector, PICT raster and TIFF. It supports the QuickDraw GX file format.
$395 retail

Trumatch Colorfinder
Digital four-color matching system
Macintosh II.

Trumatch is a digital system for four-color specification and output on electronic imagesetters. More than 2,000 colors in four-color are provided, arranged by hue with 40 tints and shades of each hue. The four-color percentages appear on every swatch. A unique feature in the patented system is the even saturation steps of color, using the ability of digital tools to round-off YMCK to one percent, providing accurate, balanced proportions. Trumatch is a four-color palette in Adobe Photoshop, Adobe Illustrator, Aldus FreeHand, Aldus PageMaker, Aldus PhotoStyler, CorelDraw, Micrografx Designer and QuarkXPress.
$85 each retail; coated and uncoated editions
Trumatch, Inc.; 25 W. 43rd St., Ste. 802; New York, NY 10036; 212-302-9100, 212-517-2237 (fax) or 212-302-0890 (fax)

Tycho Table Maker 2.0
Creates tables for use in word processing and desktop publishing programs
Macintosh Plus or larger; 1 MB of RAM.

Tycho creates tables for use in PageMaker, QuarkXPress, DesignStudio, MacWrite and virtually any other word processing or desktop publishing program. Extremely easy to use and learn, Tycho is non-modal, WYSIWYG, fast, has no arbitrary size limits (table size is limited only by available memory), religiously follows the Mac interface and creates finished tables from existing data in as little as three commands. Tycho works in a 600K partition under MultiFinder, with plenty of room for creating multiple, multipage tables. The program provides full text, layout, shading and line control over any part of the table, or users may use style sheets for quicker formatting. Often-used tables can be opened as templates (styled tables without data). Large tables can be paginated in a variety of ways, with full page-by-page control over repeating of row and column headers, user-defined page breaks, automatic creation of spreads and much more.

Macreations; 1630 30th St., #278; Boulder, CO 80301; 303-665-7250

TypeAlign
Type styling program
Macintosh Plus or larger.

TypeAlign is a simple, elegant desk accessory that works with all major page layout, word processing and presentation software programs. Using ATM, TypeAlign provides high-quality type manipulation for Apple ImageWriters, HP DeskWriters and all Adobe PostScript-supported laser printers and film recorders. TypeAlign uses familiar Macintosh tools to draw lines, arcs and free-form curves. Once the path is drawn, text can be typed directly onto the path or copied and pasted onto the path from any application. Rotation, skewing, perspective and distortion effects can be added simply by dragging points on the text block. TypeAlign features sophisticated typographic control, including kerning, which can be applied on a character pair, word or phrase. Kerning accuracy is up to 1/1,000th of an em space. TypeAlign can produce more than 16 million colors through three color models: RGB, CMYK and HSB. Color can be applied to a character, word or phrase. With TypeAlign, users can copy and paste their type effects directly into their major application, save them in PICT, EPS or Illustrator format, or print the effect directly from the desk accessory.
$99 retail
Adobe Systems, Inc.; 1585 Charleston Rd.; PO Box 7900; Mountain View, CA 94039; 415-961-4400, 800-833-6687 or 415-961-3769 (fax)

Typographer 1.0.0
Basic typesetting package with emphasis on justification, text spacing and type color
Macintosh Plus or larger; 1 MB of RAM; System 7.0 or later.

Typographer is a word processing and page layout program with emphasis on high-quality typography. Special attention is paid to text justification to optimize an entire paragraph for spacing, color and other optical considerations. Style sheets allow all attributes to be specified on a per character basis, with complete control over justification priorities. Style sheets can sequence to other style sheets at arbitrary decision points and may automatically add text. Automatic syntactic substitution allows easy text entry with both immediate and dynamic text substitutions. Characters, columns and graphics are treated as objects and allow a set of standard transformations to be applied, including scaling, skewing and rotation, with basic accuracy of 1/1,000th point and 1/1,000th degree.

HDS Systems; PO Box 42767; Tucson, AZ 85733; 602-325-3004

Ultimate Mac Impostrip
Electronic stripping
Macintosh SE or larger.

Ultimate Mac Impostrip brings electronic stripping to the Macintosh. It allows users to electronically assemble PostScript pages into finished signatures ready for printing. Users can manipulate all variables related to folding, collating, binding, press type and size. The program can output signature proofs to laser or other printers and finished signatures to PostScript output devices, onto film, RC paper or silver master-plate material. Mac Impostrip will support all color separation features of the desktop publishing program that generated the pages.

Ultimate Technographics, Inc.; 800 Rene Levesque Blvd., Ste. 2660; Montreal, Quebec, Canada H3B 1X9; 514-954-9050, 800-363-3590 or 514-954-9057 (fax)

UtilityPak II
XTensions that enhance the user-interface and productivity of XPress
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; QuarkXPress 3.0 or later.

UtilityPak II consists of three XTensions that enhance the user-interface and productivity of XPress. This collection of XTensions includes: OverHang, GuideHider and SelectIt. OverHang gives users the ability to adjust the height of the pasteboard along the top and bottom edges of a page or spread. GuideHider gives QuarkXPress users the ability to specify user-defined keyboard commands for the "Show Guides," "Show Baseline Grid" and "Snap to Guides" menu items. SelectIt allows users to deselect and reselect active items with a user-defined keyboard command. This feature will prove beneficial to individuals who frequently work in magnified views and find themselves forced to zoom out to deselect active items.

■ Verbaytum
Links stories to original text files in QuarkXPress
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

Verbaytum allows users to link stories to their original text files at the time they are imported, or the link can be established afterward. The story linking is similar to using the System 7 Publish and Subscribe feature, but Verbaytum works under System 6 as well as System 7. Verbaytum makes sure the imported story stays current. User options include automatically updating modified stories, as well as notifying the user of missing and modified stories when a document is opened. The XTension also provides a story usage dialog, which reports the current status of all imported stories in a document and allows updating of missing or modified stories.
$79 retail

■ Vision Contents
Flexible table of contents for QuarkXPress
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

Vision Contents is a flexible table of contents creator for QuarkXPress. Instead of creating a table of contents for user publication by hand, Vision Contents lets users set preferences for the table. The table of contents is then created automatically, following the user-defined preferences. A table of contents can be created for a single document, or users can use the batch processing feature to quickly generate an accurate table of contents to describe any number of documents.

Vision's Edge, Inc.; 3491-11 Thomasville Rd., #177; Tallahassee, FL 32308; 904-386-4573, 800-983-6337 or 904-386-2594 (fax)

■ XNotes
Writes messages to QuarkXPress documents
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

XNotes is an XTension for QuarkXPress that allows users to write messages that become part of the QuarkXPress document. An XNote may be attached to a particular item within a document or to the document itself. The notes can be written, read, edited, deleted or printed by anyone who has a legal copy of XNotes. XNotes are not printed when a document is printed, but

These Products Available Through Bottom Line Distribution
1-800-347-1923

the notes may be printed as a report. The freeware XNote Reader only allows users to read and print existing notes. XNotes gives users a way to communicate with the person who might later open QuarkXPress documents. Suggested uses include providing directions to service bureaus or messages to other users.

Vision's Edge, Inc.; 3491-11 Thomasville Rd., #177; Tallahassee, FL 32308; 904-386-4573, 800-983-6337 or 904-386-2594 (fax)

■ **XPreview**
Reads special resources embedded in XPress
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

XPreview is an application that reads special resources embedded in XPress documents by a QuarkXPress XTension. The application displays the vital statistics of the document, including the page size, number of pages, fonts, colors and imported pictures in the document. The application allows users to view thumbnail previews of each page of the document one page at a time. XPreview lets users load multiple documents into memory so that they may be accessed through the XPreview dialog's Documents pop-up menu. A listing of the XPreview information for all currently loaded documents may be printed out or saved as a text file for future reference. XPreview comes with a QuarkXPress XTension, Preview Editor Lite. This XTension saves preview data into a special resource every time users save their documents to make the documents compatible with XPreview.
$79 retail
Vision's Edge, Inc.; 3491-11 Thomasville Rd., #177; Tallahassee, FL 32308; 904-386-4573, 800-983-6337 or 904-386-2594 (fax)

■ **XReference**
Automates cross-referencing in QuarkXPress
Macintosh Plus or larger; System 6.0.5 or later; QuarkXPress 3.2 or later.

XReference lets users set markers into the text and when they are visible, the marked text may be highlighted or colorized to help identify it. Reference markers are set into the text of documents at points in which the reader will be referred back to. Relation markers are then added using the Insert Relation palette, which places relation markers that refer back a specific reference marker. Once all markers are placed in the text, they are hidden and, with a single command, the XReference XTension places the page numbers where the reference is located at the spot indicated by the relation markers.

Vision's Edge, Inc.; 3491-11 Thomasville Rd., #177; Tallahassee, FL 32308; 904-386-4573, 800-983-6337 or 904-386-2594 (fax)

XTension Manager
Controls the loading of other XTensions when QuarkXPress is launched
Macintosh SE or larger; QuarkXPress.

XTension Manager is an XTension to QuarkXPress that controls the loading of other XTensions when QuarkXPress is launched. Similar to INIT pickers that allow INITs and CDEVs to be turned on and off, XTension Manager eliminates the annoyance of removing XTensions from the QuarkXPress folder when they are not needed.
$69 retail

Document Imaging

■ **Banshee**
A/UX X-Window client
Macintosh II or larger; A/UX.

Banshee is an A/UX X-Window client. Macintosh, DOS or Unix X-servers may access Banshee for document viewing. Document types supported include TIFF, CALS, PIXRECT, GIF, JPEG, PICT, CCITT G2, G3, G4 and L2W. Fast find searches multiple libraries for drawing names. Pan and zoom are built in.
$399 retail; per X-server (site license available)
Microneering; 211 E. Culver Blvd., Ste. Q; Play Del Rey, CA 90293; 310-306-1153 or 800-423-0814

Document Management Systems
Solutions for the storage, retrieval and database management of documents, merged text and graphics and ASCII or OCR data files
Macintosh II or larger.

IMS offers two approaches for the storage, retrieval and database management of documents, merged text and graphics and ASCII or OCR data files. First is the Panasonic Electronic Filing System, a stand-alone dedicated workstation with a scanner that gobbles stacks of paper (40 pages/sec), stores images on removable optical disc and retrieves for view or print on demand. Alternately, for expandable, networkable and open-architecture solutions, IMS provides a four-hour consulting service designed to assist users in making critical equipment selections suited to their requirements. This includes the most efficient and dependable equipment necessary, compression and storage subsystems, quality display systems, telecommunications and database capabilities to meet current and future needs. A distributor of electronic imaging and optical disc products, IMS provides consulting, components and complete system configurations, worldwide.

Image Architect
Image management and rewritable optical storage system
Macintosh Plus or larger.

Image Architect is a complete image management and rewritable optical storage system that provides fast and easy access to large file and image libraries from anywhere on a Macintosh network. Image Architect comes complete with a network-ready server, file management software and either an optical storage subsystem or one of several jukebox autochangers, providing up to 186 GB of "hands-off" file access. From anywhere on the network, Image Architect offers tremendous flexibility in searching, viewing, manipulating and reporting of files and images. A complete catalog of all volumes is managed on hard disk. Thumbnails are automatically generated for all popular image file formats. This allows image files to be found visually. Thumbnails can be custom cropped for easier recognition. Built-in file aliasing allows one file to appear in several folders while using the disk space of only one copy. Custom keywords allow files to be organized by many different criteria.

Imagenation For Macintosh
Document imaging
Macintosh Classic or larger; 4 MB of RAM; System 7.0 or later.

Imagenation is a fast document imaging package that requires no hardware acceleration and consumes minimal memory. Office and engineering documents are easily handled. Fast multipage browsing, multiple concurrent documents and a reference window result in a powerful, easy-to-use tool. The Application Programming Interface simplifies end user integration and OEM customization. Data formats supported include CALS CCITT G4, TIFF, CCITT G3 (facsimile), RLE, RLC, HPGL and DXF. Document view and markup are available now, with edit to follow. Windows and Motif View/Markup/Edit versions are also available.

Leaf Sypress
Object archiving
Macintosh IIci or larger; 8 MB of RAM; 16-inch color display; network.

The Leaf Sypress offers storage and retrieval of text, graphics and images via LeafNet, Ethernet, ISDN or modem using the Leaf Picture Desk or Macintosh editing stations. It allows rapid access to millions of stored digital objects through an IBM RS/6000 with an AIX and Informix database.
$27,350 to $165,000 retail
Leaf Systems; 250 Turnpike Rd.; Southboro, MA 01772; 508-460-8300, 508-460-8304 (fax)800-685-9462 (Scitex America Corp.)

The Macintosh View Workstation
Provides integration with technical document image systems
Macintosh II family.

The View Workstation for the Macintosh II is a software package that brings powerful technical document management functions to the Macintosh platform. The View Workstation allows users to instantly view images of drawings as large as E-size that have been captured by Alpharel/Optigraphics scanners. The Macintosh View Workstation connects users into a network of image workstations in an Alpharel/Optigraphics System comprised of Macintosh, PS/2, PC and Unix workstations — designed to provide the right information to the right people at the right time. The View Workstation is easy to operate, with standard Macintosh pull-down menus, view windows and icons. Documents are accessed via network communications, which greatly simplifies the gathering of information. The package pans and zooms images dynamically at subsecond speeds to ensure quick examinations of all drawing areas at various levels of magnification. View Workstations can be networked with other types of workstations, scanners, plotters and storage devices to form a powerful information and image manager system.

MARS Viking
Provides linked-departmental document imaging
Macintosh with 68020 processor or larger; 5 MB of RAM; System 6.0.5 or later.

MARS Viking represents a quantum leap toward true enterprise-wide document management. It provides linked-departmental document imaging for large organizations and allows both Macintosh and Windows users to access powerful RISC/Unix servers. Based on the MD MARS product line, MARS Viking integrates Microsoft, PC and Unix machines. Viking provides a distributed architecture with virtually unlimited storage that is easy to scale and easy to tune to different performance demands.

Micro Dynamics, Ltd.; 8555 16th St., 7th Fl.; Silver Spring, MD 20910; 301-589-6300 or 301-589-3414 (fax)

Micro Dynamics MARS
Multiuser archival and retrieval system
Macintosh with 68000 processor or larger; System 6.0.5 or later.

The Micro Dynamics MARS (Multiuser Archival and Retrieval System) is an imaging system that stores millions of documents from a broad range of information types, including paper documents, computer-generated files, color and black and white photographs, x-rays, microfilm, sound and video. The system stores this information on optical disks — a highly reliable medium. Users can retrieve information in two ways: by using descriptive keyword searches or by searching on any word or phrase contained in a document's text. With MD MARS 3.0, the latest version of the software, users can also attach text or voice notes to a document, and edit or redact a document. Clients currently use MD MARS to manage corporate records, legal case-related documents, correspondence tracking, new drug applications, student records, technical research and documentation, proposals, manufacturing reports, signature verification and many other applications.

Oasis
Open architecture software imaging system
Macintosh 512KE or larger.

Basic document storage and retrieval systems seek to use the best compression methods to reduce the amount of storage for what may be millions of documents. CCITT Group IV is widely used for this compression.

Oasis permits users to access a document image database and display the document locally on any Macintosh without the addition of decompression hardware. Markup tools provide easy markup of original documents. CCITT and TIFF are methods for storing raster images. Oasis converts bi-tonal to gray scale, then performs resizing functions, generating higher-quality bi-tonal output on black and white Macintosh monitors, up to 2,540 dpi laser printers and true gray-scale display on Macintosh II and Scuzzy-Graph systems. QuickTime compressed PICT is supported.
$399 retail; site licenses available
Microneering; 211 E. Culver Blvd., Ste. Q; Play Del Rey, CA 90293; 310-306-1153 or 800-423-0814

ODDS
Oasis document distribution system
Macintosh 512K or larger.

The ODDS system makes it possible to distribute large amounts of printed and graphic materials, such as magazines, price lists, bidding specifications, period updates, etc., in a machine readable format rather than on paper or microfilm media. One diskette can store 50 documents in compressed CCITT Group IV, reducing reproduction, configuration management and postage. E-size and larger documents are easily viewed or printed. PC-DOS and Windows are supported. Documents are coded for security and may be electronically distributed over telephone lines.
$149 retail
Microneering; 211 E. Culver Blvd., Ste. Q; Play Del Rey, CA 90293; 310-306-1153 or 800-423-0814

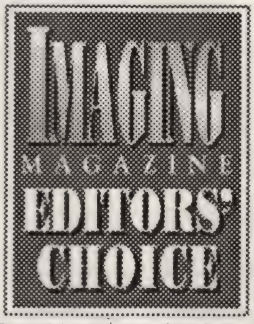
Optix 4.0
Document imaging and electronic document management software
Macintosh II family.

Optix software turns a Macintosh and a scanner into a stand-alone document imaging and electronic document management system that lets users scan, index, annotate and archive all of their paper or microfilm documents to a Macintosh — like an electronic file cabinet. Users can also index, archive and retrieve the files already on the computer, such as spreadsheets, word processing documents, databases and graphics files. Users can then use the power and speed of the computer to retrieve exactly the documents they want, whenever they want them, in seconds. Optix includes a powerful database to index a million or more documents, "post-it note" annotation of images, forms dropout and forms overlay, lightning fast CCITT Group IV compression and decompression, a built-in applications generator, thumbnail views of multipage documents, image enhancement tools and support for high-performance scanners and printers from letter- to blueprint-size. Optix can serve as a stand-alone imaging system or several Optix workstations can share data on an AppleShare file server. For larger networks, Optix can be a workstation on Optix Network — a multiuser system featuring a powerful Unix/SQL server. Optix also works with the optional Optix OCR Engines and the optional Optix Natural Language Search text search software.
$995 U.S. retail
Blueridge Technologies, Inc.; PO Box 430; Flint Hill Sq.; Flint Hill, VA 22627; 703-675-3015 or 703-675-3130 (fax)

Optix FaxServer
Multiuser fax server for Optix Imaging Systems
Macintosh II family; Optix 4.0 or later.

The Optix FaxServer software receives incoming faxes via popular fax modems and queues these faxes for indexing and archiving on the Optix Document Imaging and Electronic Document Management System. The Optix FaxServer also permits multiple Optix users to send faxes of document images from within Optix.
$1,995 U.S. retail
Blueridge Technologies, Inc.; PO Box 430; Flint Hill Sq.; Flint Hill, VA 22627; 703-675-3015 or 703-675-3130 (fax)

Optix Network
Multiuser document imaging and electronic document management system
Macintosh II family.



Optix Network is a document imaging and electronic document management system that permits a large number of users to archive and retrieve literally millions of document images, including scanned images of everything from microfilm to blueprints, and computer files of all types, including spreadsheets, word processing documents, databases and graphic files. Optix Network features Macintosh (or Windows) workstations attached to an image server that is running Informix SQL-DBMS under A/UX. Optix Network takes advantage of the multitasking, multiuser capabilities inherent in Unix. Retrieving an image on an Optix Network takes less than a second, even when other users are accessing the system simultaneously. Optix Network provides Boolean, wild-card and range searching capabilities and can handle multiple databases of millions of documents. Optix Network features the Optix User Interface and includes "post-it note" annotation of images and an application generator that lets even novice users create their own index screens. Optix Network also works with the optional Optix OCR Engines, the optional Optix Natural Language Search text search software and optional Optix Workflow software. Because of its adherence to such standards as TIFF, CCITT Group IV compression and decompression, Unix and SQL, Optix is easily integrated into existing MIS environments.

Blueridge Technologies, Inc.; PO Box 430; Flint Hill Sq.; Flint Hill, VA 22627; 703-675-3015 or 703-675-3130 (fax)

Optix Workflow
Electronic workflow software for Optix Network
Macintosh II family; Optix 4.0 or later.

Optix Workflow software adds to an Optix Network the ability to move documents through an organization electronically, instead of by hand. Information can get to the people who need it much faster than before and more work can get done. The bottlenecks that are part of a paper routing system — copying documents, moving documents from one desk to another or one building to another, re-routing documents when someone is absent, manually keeping track of documents as they move, locating documents when they are lost or misplaced — all of these are eliminated by electronic workflow. Optix Workflow includes an applications builder that permits users to create their own routing and distribution flows, and electronically re-engineer the way they process information, for greater productivity at a lower cost.
$40,000 starting price U.S. retail
Blueridge Technologies, Inc.; PO Box 430; Flint Hill Sq.; Flint Hill, VA 22627; 703-675-3015 or 703-675-3130 (fax)

Sonar Image
Document imaging system
Macintosh II or larger; 8 MB of RAM; hard disk drive or optical disk drive; System 7.0 or later.

Sonar Image is a document imaging system that combines Virginia Systems' Sonar Professional text retrieval system with a special version of Caere's OmniPage OCR system in a seamless manner. Imaging is completely controlled from within Sonar, with OmniPage operating silently in the background. Each imaged document is stored as a single file. As each page of a document is scanned, the image and recognized text are saved for later retrieval. Users can search for any word or phrase in the scanned documents and can then view the recognized text and page images side by side. The images can be printed or copied and pasted, as can the recognized text. A wide variety of scanners and automatic document feeders are supported. Word processor files can be searched in conjunction with imaged files.

Workflow Administrator 2.0
Document management system
Macintosh II or larger; 12 MB of RAM; hard disk drive; System 7.0 or later.

Workflow Administrator is a configurable client-server multiplatform work management file system. It manages files from virtually any Macintosh application: Microsoft Word, Adobe Photoshop, Adobe Illustrator, Aldus FreeHand etc. WorkFlow Administrator is based on a relational database, 4th Dimension 3.0, and Macintosh Inter Application Communication (IAC) technology. This product provides unique file access through the work group, automatic archive and file backup and advanced routing and scheduling capabilities, including user notification. New features are extensive querying capabilities and windows clients. WorkFlow Administrator also provides a simple interface to scripting products, such as UserLand Frontier, that allows customized query of any file in the database.

■ **Dingbat Magician**
Create logos, patterns and colorful designs
Macintosh Plus or larger; 2 MB of RAM; System 6.0.5 or later; color monitor recommended.
Dingbat Magician allows users to create logos, patterns and colorful designs using dingbat and picture fonts. Magician can use dingbat fonts to create designs faster and more efficiently than with conventional drawing programs. Dingbat objects are assembled and manipulated in a free-form working environment, allowing users to spend more time with the design and brainstorming process. Dingbat Magician is made to be "simply useful."
$24.95 retail

■ **GraphicalsOne**
Symbols representing Indian culture and its various religions
Macintosh Plus or larger.
GraphicalsOne is a unique collection of symbols representing Indian culture and its various religions. The typeface consists of characters that can be used to depict the Indian touch. These motifs deal with various subjects, such as auspicious symbols, religious symbols and simple figures that have come to be identified with the Indian ethos. The typeface has been created such that characters can combine with characters to form complex shapes.

■ **SlavicSwiss Cyrillic Fonts**
Slavic language fonts
Macintosh Plus or larger; System 6.0.7 or later.
The SlavicSwis Cyrillic Fonts, similar to the common Helvetica typeface, contain all characters for English as well as modern Slavic languages that use the Cyrillic alphabet (Russian, Ukrainian, Byelorussian, Bulgarian, Serbo-Croation and Macedonian). Both standard and phonetic keyboard layouts for Russian and Ukrainian are included. These scalable fonts are available in TrueType and PostScript Type 1. To type Cyrillic characters, users go to the keyboard control panel and choose a keyboard; switch to the applications and choose the SlavicSwiss fonts; and press the Caps Lock key on the keyboard. Key Caps can be used to see where each Cyrillic character is on the keyboard.
$124 retail

■ **Thangam**
Tamil language typeface
Macintosh Plus or larger.
Thangam is a Tamil language typeface. It consists of three fonts: Light, Medium and Bold. Thangam is a PostScript Type 1 and TrueType typeface that works seamlessly with all Macintosh applications and all versions of System software. Thangam comes equipped with a phonetic text entry system that makes it extremely easy to use. It has been created with a very comprehensive character set so that the creation of any Tamil text does not pose any problem.

DataModeler
Produces on-screen forms to enter, edit and print data
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.
DataModeler provides users with a variety of options to produce on-screen forms to enter, edit and print data. Printed forms digitized from a scanner and forms created in any graphics program will be recognized and reflected on screen by DataModeler in a matter of seconds. Users may elect to create, size and position boxes in the interface as well. Featuring unique graphic forms capability, DataModeler supports various data types, such as text, number, date, time, phone, sequence, Boolean, list, document, sound, picture and QuickTime movies, in user-defined boxes. DataModeler shows on-screen calculations of computed fields. Convenient entry and display filters, along with full-color appearance attributes are provided. Options for lock after, mandatory and retain last entry are included. The form and the data, or just the data, can be printed at 300 dpi. DataModeler is System 7 compatible.

Federal JobLink
Complete package of the latest SF 171 application, supportive forms and information for persons seeking federal government employment
Any Macintosh; MacDraw I, II or Pro.

Federal JobLink is a complete system for persons seeking employment in the federal government. It provides the most requested forms of federal agencies. The reference guide provides clear, understandable instructions for where to start and what to do in obtaining federal employment, how to produce a well-organized application using JobLink's page numbering scheme with modified pages and, most important, how to easily update a current application. There are 27 pages of forms, a listing of Federal Job Information Offices and online help on the forms disk. Each form appears on the screen. Users answer the questions, place a blank sheet of paper in the printer, select print and the form with answers is printed in one step.
$62.95 retail; specify MacDraw I, II or Pro

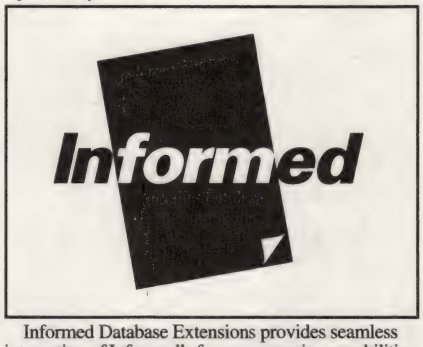
Informed Database Extensions
Provides seamless integration of Informed's forms processing capabilities with external databases
Macintosh Plus or larger; appropriate database software; System 7.0 or later.



Informed Database Extensions provides seamless integration of Informed's forms processing capabilities with many leading database systems. By simply copying these extensions into the "Informed Extensions" folder, users can perform lookups into the database and submit completed forms to the database. Extensions are provided for DAL, TechGnosis' SequeLink, Sybase using OpenClient and Oracle using SQL*Net. Both DAL and SequeLink provide access to almost all major client/server databases. This package also includes 4th Dimension externals for linking forms to 4D databases.

Informed Designer
Forms design
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; printer.

Informed Designer is used to create professional-looking forms using specialized drawing tools or importing scanned images of existing forms. Definable grids, guides and rulers with up to 1/1,152-inch accuracy assist specialized tools in creating tables, fields, check boxes, combs and rounded corners quickly and efficiently. Users can add intelligence to their forms with more than 160 functions to choose from, unlimited choice lists and lookups to other forms or applications. Forms professionals can design digital signature fields into their forms, ensuring users of the security of the data while permitting them to sign forms using a digital "key," either locally or remotely via modem.
$295 retail
Shana Corp.; 9650 20th Ave., Ste. 105; Edmonton, Alberta, Canada T6N 1G1; 403-463-3330 or 403-463-3343 (fax)

Informed Foundation
Forms processing applications
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.5 or later (System 7.0 required for some features).

Informed Foundation is a collection of forms processing applications that allows users to build a complete electronic forms system. Users use Informed Designer to draw the forms and add data intelligence; Informed Manager to fill them out and mail them to other users; Informed Revision Distributor to automate the distribution of form revisions; and Informed Number Server to automate the assignment of unique and sequential form numbers over the network as new forms are filled out. In addition, Informed Foundation includes translation software that allows users to Delrina PC-based forms software to work with Informed forms and vice versa. Informed Foundation also includes translators for SmartForms, TrueForm and FastForms, allowing users of these products to upgrade easily. AppleScript is included with Informed Foundation and will allow users to automate repetitive tasks. In addition, Informed Foundation can be controlled from other applications and forms can be integrated with data stored in scriptable applications. With Informed Foundation, users can build a complete electronic forms system that will save money and improve productivity through each stage of a form's life — design, distribution, fill out, routing, approval and submission into a database or accounting system.
$495 retail
Shana Corp.; 9650 20th Ave., Ste. 105; Edmonton, Alberta, Canada T6N 1G1; 403-463-3330 or 403-463-3343 (fax)

Informed Manager
Fills out and manages forms designed with Informed Designer
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; printer; System 6.0.5 or later.

Informed Manager enables users to fill in a form created with Informed Designer. It takes full advantage of the intelligence added to the form while being designed (e.g., error checking, choice lists, lookups and help messages). With Inter-Application Communication (IAC) capabilities, live lookup between other software packages can be achieved, increasing data entry accuracy and saving considerable time. Sorting, searching, editing or printing a form is a simple and quick process. Users can mail single or multiple forms across a networking using Microsoft Mail, QuickMail or the mail services of Apple's PowerTalk. Support for PowerTalk also provides full support for digital signatures, ensuring that a forms system developed with Informed can fill out, route, approve and submit forms entirely electronically.
$195 retail
Shana Corp.; 9650 20th Ave., Ste. 105; Edmonton, Alberta, Canada T6N 1G1; 403-463-3330 or 403-463-3343 (fax)

Informed Number Server
Automatically distributes unique, sequential numbers to electronic forms over a network
Macintosh Plus or larger; System 7.0 or later.

Informed Number Server is a server-type application that automates the assignment of unique and sequential form numbers over a network as new forms are filled out with Informed Manager. Most forms are identified by a unique form number (i.e., invoice or purchase order numbers). Rather than manually entering the next available form number each time a new form is filled out, this number can be obtained from a Number Server

over the network. This is especially useful when several users are filling out the same form.
$149 retail
Shana Corp.; 9650 20th Ave., Ste. 105; Edmonton, Alberta, Canada T6N 1G1; 403-463-3330 or 403-463-3343 (fax)

Informed Revision Distributor
Automated forms distribution and revision control
Macintosh Plus or larger; System 6.0.5 or later.

Informed Revision Distributor offers automated forms distribution and revision control. The notification of new form revisions occur automatically, and revision control can be reliably enforced with various options. As a result, form revisions are distributed more efficiently and the costs generated by users unintentionally filling out obsolete forms are reduced. Forms are classified as current, non-current and discontinued. The Forms Administrator can set how often the check for a new revision or a change in the forms status is performed. If the form is checked and found to be non-current or discontinued, users can automatically update to the new revision. In the case of a discontinued form, users can even be prevented from adding new forms into the discontinued version.
$149 retail
Shana Corp.; 9650 20th Ave., Ste. 105; Edmonton, Alberta, Canada T6N 1G1; 403-463-3330 or 403-463-3343 (fax)

Mac Movie Forms Version 3.0
Forms for film and video production; commercial production; videotape production and postproduction
Any Macintosh; MacPaint, FullPaint or SuperPaint.

Mac Movie Forms is designed to support pre-production, production and postproduction with such forms as call sheets, production reports, talent and location releases, casting information, story boards, expense reports, film and videotape logs and more. Mac Movie Forms Version 3.0 contains 28 of the most used and useful film and video production forms on one disk.

Purup FormsExpert
Professional forms design program
Macintosh II family; 2 MB of RAM; hard disk drive.

FormsExpert is a program for the design and production of business forms and other documents where a high degree of accuracy and complete control of all graphic elements is required, from manuscript to color separations. It is a powerful production-oriented program, but still very easy to learn. The programmable toolbox and color palette, as well as support for digitizer input, allow even complex designs to be completed in minutes. The color separations produced by FormsExpert are of high quality. Tools are available for drawing all graphic elements needed in a business form. In addition to the functions contained in leading desktop publishing graphics design programs, the following features are included: all typographical units can be used independently on all coordinates and parameters; user-defined document formats; advanced, easy-to-use control of box corners and line orientation; full support of CMYK, Pantone and spot colors; automatic conversion between color models; graduated screens and patterns can be used in all objects, including text; full support for the Wacom digitizer tablets; and text can be edited directly on the screen in full WYSIWYG, including rotated and transformed text.

TrueForm
Computerized completion of any form
Macintosh Plus or larger.

TrueForm is a forms processing package designed to automate users' existing forms. It allows users to transition from paper to computerized forms without any change to the forms they are familiar with. With TrueForm, users can import their electronic forms from popular drawing and page-layout programs. It accepts EPS, PICT and MacPaint files. TrueForm also allows users to take advantage of their existing paper forms by directly scanning them in and immediately filling them out. It reads prescanned forms saved in TIFF format and supports scanners with the Apple standard scanner interface. TrueForm also features powerful spreadsheet capabilities; includes a set of sophisticated data sharing features; and includes a 4th Dimension printing module.

Information Management

1stVue
Form completion and multiuser database
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.

1stVue II provides the tools required for users to set up applications via forms and files. 1stVue is a form completion and multiuser database that includes a unique graphic forms interface with multimedia capability. It is designed for use with 1stBase-II, a relational database and report generator. By using 1stVue II with optional DataModeler and 1stBBS-II, users can create a form with 1stVue II and send it to customers with 1stBBS-II. Customers then fill out the form with DataModeler and send it back with the files attached using 1stBBS-II. Clairvoyant Posting gives users the ability to simply open the form with 1stVue and customers' data is automatically added to the database. Customers view their orders with 1stBBS-II's database lookup feature. 1stVue II features patented Fuzzy Find over weighted fields and MacroAccess Command icon system automation. 1stVue II supports 12 different kinds of data filters, including documents, sounds, pictures and QuickTime movies. The 1stVue II database is automatically generated based on the form's attributes. 1stVue II's numerous display and entry filters provide users with an efficient way of entering and displaying all of their business information. It is System 7 compatible.

AddressTrak
Provides complete management of contacts and follow ups
Macintosh Plus or larger.

AddressTrak tracks detailed information about communications with a contact and schedules follow ups for each contact (when users need to contact them again). Each day, AddressTrak's Main Menu displays the number of follow ups that have been scheduled for

TeleMagic – Client/Sales Management Database
MaxSolutions ---------- (619) 431-7321

that day, as well as those that have not been dealt with. AddressTrak also allows users to view or print follow ups that have been scheduled for the current week, the following week or the month. AddressTrak maintains a history of all of a user's interactions with a particular contact, including the date the follow up was originally set, when it was completed and the notes on what was discussed. Users can also create a manual history note for a single or group of contacts; this allows users to document a mailing with a date-stamped message (e.g., 9/12/93: Sent mailing about our participation in the Fall show). AddressTrak incorporates a phone timer, which logs the duration of a phone call, as well as any notes on what was discussed. It prints form letters without the need of a word processor and stores most frequently used form letters in a separate file. It also prints mailing labels (1-up, 3-up or user defined), fax cover sheets, contact lists and contact lists summarized by company name. In addition, it prints in an address book format, which can be used with daily planners. It creates a referral analysis report that allows users to see where their leads have originated from, with the percentage attributed to each source. AddressTrak is network accessible, both Macintosh and Windows.

Arrange 2.0
Personal information manager
Macintosh II or larger or Power Macintosh; 2.5 MB of RAM; 3 MB of free hard disk space; System 7 or later.

Arrange is a quick and flexible way to manage information. Arrange eliminates the need for users to buy and learn multiple products. Arrange manages it all: contacts, schedules, to-do lists, projects, files, notes and more. It is fully integrated, automatically updating information for users. Arrange's drag-and-drop interface can be used to change schedules, appointments, move and organize information instantly. Grabber technology lets users gather information from a variety of sources, including CD-ROMs, E-mail systems and online services. Automatic merge keeps a desktop Macintosh and PowerBook in perfect agreement. It includes intelligent import/export to automatically integrate and manage any type of new information in the correct format. File referencing lets users open up and use any files from a hard disk or server within Arrange. Integrated forms come with full Avery label support, Advanced Calendaring, Open Architecture for third-party development and much more.

Atelier Hello 2.0
Personal communication manager
Macintosh Plus or larger; 1 MB of RAM; System 7.0 or later.

For busy communicators, Atelier Hello offers all-in-one management of contacts and correspondence. Built around an intuitive and inviting push-button interface, Atelier Hello combines three basic communication building blocks: a phone directory, a word processor and an auto-dialer. Atelier Hello's most innovative aspect is its scalable architecture, which accepts plug-in modules that enhance the base program. Modules are simply dropped into a folder and appear in the user's tool palette the next time the program is used. Write lets users generate correspondence effortlessly using auto-address insertion, simple mail merge, spell checking, envelope and label printing. Call provides one-button speed dialing and last number redial.

■ Claris Organizer
Information manager
Macintosh Plus or larger; 2 MB of RAM (4 MB recommended); System 7.0 or later.

Claris Organizer is an all-in-one, intelligent personal information manager (PIM) that combines the functionality of a wide variety of PIM products into a full-featured solution. Claris Organizer seamlessly integrates a calendar, contacts, tasks and notes into one compact application. Claris Organizer incorporates intelligent assistance that automatically links users' contacts with appointments, tasks and notes, putting all this information literally at their fingertips. This intelligence also allows for flexible printing and seamless data importing. Claris Organizer delivers unparalleled power to the PIM software category with robust functionality in each of its environments. This power, coupled with ease of use, makes Claris Organizer an ultimate personal organizer. It is Power Macintosh compatible.

Command Center Plus For The Macintosh
Centralized client/server executive information system
Macintosh LC, II, Quadra or PowerBook; 4 MB of RAM; hard disk drive; System 7.0 or later.

Command Center Plus offers the most choices to users who want the speed, ease of use and graphics power of the Macintosh or personal computer and the power, data integrity and ease of maintenance of a mainframe. Command Center Plus is all inclusive and features a time-series database management system that is optimized to drive EIS applications. In addition, Command Center Plus includes an EIS specific fourth-generation language; host-workstation communications software; workstation processing software for such tasks as caching and graphics; and all the tools necessary to implement and modify an EIS. Command Center Plus uses a seamless architecture for host-to-workstation cooperative processing. The workload is distributed between the host and the workstation, making the best use of each computing platform. In this configuration, Command Center Plus uses the Macintosh or PC as the window into the EIS host data. On the host, Command Center Plus stores and manipulates information. When the host receives a request from the workstation, Command Center Plus retrieves the data, formats it and presents it as a series of colorful text, charts, graphs and tables.

Consult!
Computerized office for professional consultants
Macintosh with 68040 processor or Power Macintosh; 5 to 8 MB of RAM; 50 to 10 MB hard disk drive.

Consult!, The Computerized Office for the Professional Consultant, is an all-in-one software application written exclusively for independent consultants. Consult! lets users establish business values and goals, track projects and sub-tasks, keep a calendar and to-do list and track contacts and notes. Users can analyze their performance in carrying out projects and get advice on how to handle future projects; analyze client work potential; and build client reference sheets based on services performed. Accounting features include default chart of accounts, double-entry accounting, recurring transactions, check writing, billing, accounts receivable and financial reports. Power Cross-Referencing allows users to see amazing data relationships between systems. The Reminder screen shows the status of all systems at any moment. Consult!'s Business Advisor will help users make important business decisions.

Contact Ease
Sales and marketing follow-up program
Macintosh Plus or larger; hard disk drive; System 6.0.2 or later.

Contact Ease automates contact follow up. It supports target marketing using direct mail and telemarketing, and also tracks personal activity items. By entering follow-up "plans," the program can automatically generate all the right letters and activity items at the right time with one mouse click. A built-in word processor lets users apply fonts, sizes and styles character by character. Graphics can be placed anywhere in a document. Envelopes are printed with U.S.P.S. Postnet bar codes. The unique CyberSwap feature lets users take data along on a portable computer, and then easily merge changes into the office data file. Contact Ease provides a contact list for quickly finding the right person. Other features include: dials the phone; logs calls; prints mailing labels; 20 user-defined custom fields; and text import and export.

Control Center 3
Executive information system
Macintosh with 68030 processor or larger; 8 MB of RAM; System 6.0 or later (System 7.x recommended); dedicated server for network use.

Control Center 3 (CC3) is a real-time groupware project and document management system that provides true multilevel drill down — the ability to go from one piece of information to another through a series of dynamic links. Permissions established for users determines access to information and documents. Using the "project" as a metaphor for managing and tracking an activity or group of activities, a project initiator can assign a manager who may, in turn, assign "parts" of a project to various users. These users may, in turn, perform the work themselves or send it outside, with all appropriate paperwork generated in the process (e.g., purchase orders). All work is put on a schedule and the initiator and manager of a given project can easily oversee those schedules, find out where something is, was and is gong to and what's happened to it along the way. Documents are not only tracked — they're integrated into the activity. If part of a piece of work assigned to someone involves reviewing a spreadsheet or a page layout, a click takes a user into that document to do that work. The set up and capture of daily business and personal activity provides an accurate picture of a business while performing nearly all of its vital functions from client database to accounting.

Data Warehouse
Can combine text, PICTs, ASCII, moov, PICS, etc., into one self-contained application program
Macintosh Plus or larger; System 7.0 or later.

TeleMagic – Client/Sales Management Database
MaxSolutions ---------- (619) 431-7321

Data Warehouse can combine text, PICTs, ASCII, moov, PICS, etc., into one self-contained, stand-alone application program. It can take any amount of loose pages, any number of chapters, use any font or style for any character and create an "electronic notebook" for viewing or printing. It can hold, view, print and search in definable groupings, and utilizes Formulator, allowing users to enter information throughout without damaging the original. Tiered levels of security protection, automatic backup with all utilities and cross-application ability are some of the special features available in Data Warehouse. Each page can be personalized with name, copyright, etc.

DataMerge V2.5
Utility for manipulating tabular data
Macintosh Plus or larger.

DataMerge is designed to help users increase their efficiency in working with tabular databases. It can be used by any individual who needs to assemble tabular data for graphing, presentation or analysis. DataMerge allows users to move tabular databases from one application to another and from platform to platform; to combine databases and selected columns or rows of multiple databases; and to quickly inspect the contents of large files without having to load entire files into computer memory. The utility allows merging up to nine text-format data files into a single file with as many as 99 columns. It can also be used to create new files by combining selected columns from multiple files, to reorder columns in a file and to name or rename column headers.

DataPivot 1.5
Dynamic reporting tool
Macintosh Plus or larger; System 6.0.7 or later.

DataPivot is a report builder that gives user control over their data. Its dynamic data "frame" allows users to interchange rows and columns, define groups, totals and subtotals, and build reusable templates that reveal the structure and meaning of data. DataPivot supports System 7 IAC and accepts data from virtually any source, including spreadsheets, query tools and text documents. DataPivot transforms the drudgery of reworking, rethinking and reanalyzing data into a stimulating, dynamic, visual process. Data manipulation becomes visual data sculpting. The shape and texture of results are limited only by a user's imagination.

Day-To-Day Contacts 3.5
Contact management database with DA that prints organizer pages, envelopes, labels and rotary cards
Macintosh Plus or larger; 2 MB of RAM; hard disk drive.

Day-to-Day Contacts is an essential contacts management companion. With its data entry shortcuts, incredible speed, ease of use and printing, Day-to-Day Contacts will free users from contact management drudgery. Day-to-Day Contacts is a full-featured address management application that prints addresses to personal organizer pages, memos, envelopes, labels and rotary cards. Day-to-Day Contacts now includes Dynofind, allowing users to find information from within any application, copy and paste and dial the phone number blazingly fast without ever launching Day-to-Day Contacts. Day-to-Day Contacts helps users manage contacts with three level sorting, ultra-fast finding and easy data selection features. Ideal for PowerBook users, Day-to-Day Contacts' synchronize feature allows users to effortlessly keep home files and traveling files in perfect synchronization. Day-to-Day Contacts' memo feature helps users instantly write memos and address them from a single application.

Day-To-Day Notepad
Organize thoughts, improve writing and keep a to-do list
Macintosh Plus or larger; 2 MB of RAM recommended.

Day-to-Day Notepad is an outlining program that allows users to easily organize thoughts, plans, meetings, etc., in an easy-to-use notepad format. This program is perfect for anyone who takes notes, in the office or on the road. Day-to-Day Notepad links directly to Portfolio Software's Day-to-Day Contacts for easy logging of all conversations, meetings and phone calls with a particular contact. Day-to-Day Notepad gives users a simple and elegant way of organizing notes and graphics in a small and fast program. Day-to-Day Notepad allows users to expand and collapse topics, organize by dragging topics and sort topics easily to prioritize and organize. Day-to-Day Notepad is perfect for organizing large writing projects, creating everyday to-do lists and organizing projects. Notepad supports Publish and Subscribe and Apple Events, and is fully System 7 compatible.

Dear Diary
Data-based note taker, general to-do list, appointment calendar and more
Macintosh Plus or larger; System 6.0.7 or later.

Dear Diary will keep track of phone conversations, track meeting notes, take notes during interviews, keep a daily journal and jot down thoughts. The software is based on daily entries so that users can go back to a particular date and see what happened, see what was said or see who called. If users only remember that someone named Ron called or that Ron called about golf, the advanced find feature will help locate that particular entry. It will not only give users a listing of the days that Ron's name appears, it will display surrounding text so that finding the entry they are looking for becomes easy. Time and day stamps are also included so that entries made on different days can be recognized while reading notes from a different day. The to-do list stays visible whether users are in Notes or Appointments. Descriptions of items in the to-do list can be as long or as short as needed. Upon completion of an item in the to-do list, users can either check it off or delete it entirely. Users can also jump from item to item without the need to scroll through an entire list. The to-do list can be printed separately for ease of use.

Direct Phone
Residential white page directory
Macintosh with 6 MB of RAM; CD-ROM drive.

Direct Phone is the first residential white page directory on a single CD-ROM. The set includes a residential disc with 72 million listings and a business disc with 8 million listings. Users can search by name and limit searches by address or area code. Direct Phone offers the convenience of being able to quickly search the white page directories from every city in the United States. The product replaces the need to call operator-assisted directory assistance, currently a $2 billion a year business. There are no restrictions on the use of the data and the information can be output to disk, printed or, with a modem, a listing can be automatically dialed.

DiskAuditor
Disk auditing system for license and assets management
Macintosh Plus or larger; System 6.0.3 or later; printer recommended.

DiskAuditor is a system tool designed to quickly and accurately perform audits on all online disk volumes. It searches and detects the presence of all software applications, INITs and CDEVs. DiskAuditor keeps a running inventory (audit trail) of the authorized software for each machine. It easily allows the addition of newly acquired software and writes a report showing what applications, INITs and CDEVs are on the disk. Reports are maintained on file for subsequent audits and export. The system allows the auditor to add applications, INITs and CDEVs to the system audit when new packages are purchased and added to the inventory. DiskAuditor is System 7 compatible.

Documentum Enterprise Document Management
Business critical, enterprise-wide applications for compound document storage, retrieval, revision control, assembly and work flow
Unix or NT server; Macintosh, MS-Windows and Unix clients.

Documentum's comprehensive software system enables documents to be managed as part of an overall information system business model strategy. Documentum utilizes an architecture that preserves a user's investment in systems, information and training. The object-oriented architecture makes it easy to design and rapidly deploy a user's solutions. Packaged with implementation and integration services, the solutions are targeted at enterprise critical applications in the Fortune 1000 corporations and government agencies. Documentum's products consist of a suite of applications, a distributed docbase, client interface, client API and a tool kit. Documents can consist of revisable files produced by word processors, spreadsheets, graphics, images and multimedia files. The initial system implementation utilizes commercial RDBMS technology (Oracle and Sybase) on a Unix server and supports all popular desktop applications under Macintosh, Microsoft Windows and Unix.

HyperCard 2.2
Personal tool kit for building custom software
Macintosh Plus or larger; 1 MB of RAM; 800K floppy disk drive; hard disk drive.

HyperCard gives users the power to use, customize and create new information using multiple information types, such as text, graphics, video, music, voice and animation. It includes HyperTalk, an easy-to-use, English-based scripting language that provides users with the ability to design and write their own software. The program is based on index cards, each containing information. The number of cards is limited only by the storage capacity of a user's disk. Users can browse, sort, make notes, type or draw on these cards in the same manner as paper index cards. Cards can be linked to other cards by adding "buttons." A user can activate a button and link a card or part of a card to another card or stack of cards. Buttons can also perform a variety of tasks, such as dialing the telephone, sorting a stack or finding a videodisc sequence. Version 2.2 integrates a key Apple technology, AppleScript, which enables users to automate repetitive tasks by launching, controlling and exchanging data with existing applications. HyperCard also includes the ColorTools for seamlessly adding color to stacks; WorldScript support for creating multilingual solutions and a new "save as" option that creates double-clickable applications that can be distributed without royalty fees. In addition, HyperCard bundles ADDmotion II from Motion Works International for easy creation and editing of animation.

InfoDepot 2.0
Organizational tool for more than just information
Macintosh Plus or larger; 1 MB of RAM; System 6.0.5 or later (some features require System 7.0 or later).

InfoDepot is the newest version of Fair Witness. It is a powerful and innovative way to organize more than just information. Managers, sales people, project leaders and others responsible for organizing, reporting and evaluating information will find InfoDepot extremely robust, yet flexible enough to handle all types of information with its variety of views. If users make a change in one place, it's automatically updated in the outline, table, timechart, form, chalkboard and calendar. It's easy to collect text, dates, numbers, pictures, sound, even movies — and organize and rearrange them quickly. Users can build custom tables; perform date and math calculations; and see dates on a time chart or calendar. Users can save views of their documents to focus on specified information. InfoDepot has multiuser capabilities, so an entire project team can work with the same document at the same time. Other features include full search and sort capabilities, connections to other documents, complete AppleScript support and built-in connections to share information with other software.

InView
Information management
Macintosh Plus or larger; Panorama II or Panorama Direct.

InView is an integrated set of files for client data management, marketing, time and materials billing and collections. Originally designed for professional photographers, it is suitable for any service-oriented business. InView includes the complete InContact module, plus financial record keeping functions. It generates estimates, job confirmations, in-progress job reports and invoices. A click of the mouse converts estimates to jobs to invoices, etc. The program can provide on-screen or printed profitability reports and comparisons of an estimate to the actual job or invoice. Financial record keeping includes check writing for multiple checkbooks, Payables and a Receivables file that handles partial payments, issues statements and provides extensive financial reports and histories. The Equipment file calculates values, depreciation, warranty and repair dates and will print reports, including insurance lists with either replacement costs or actual values. All printed reports are fully customizable by a user.

InView Contacts
Information management
Macintosh Plus or larger; Panorama II or Panorama Direct.

InView Contacts is a personal information manager designed for anyone whose business involves being in contact with other people. It has a heavy marketing orientation, including fully cross-referenced profiles on each individual. Tickler functions remind users when to send materials, make follow-up calls, etc. InView Contacts keeps individual histories of mailings, phone calls, sales calls and other contacts. A unique letter generator allows the creation and storage of up to 20 form letters for quick retrieval. Letters can be retrieved and modified or created on the fly, and then printed as letters or faxes to one or several individuals. The program dials the phone, times calls and provides various telephone reports that can be used for time and/or expense billing. The calendar and scheduling functions handle schedules for one or several people. The program prints airbills, mailing labels, rotary file cards and more. All printed reports are fully user customizable.

macControl II 3.4
Executive information system (EIS) and decision support system (DSS)
Macintosh IIci or larger, including PowerBook; 4 MB of RAM.

macControl is a MIS software package that is appropriate for executive information systems and decision support systems at all levels of management. At its foundation is an object-oriented, multidimensional database with an object-oriented interface. macControl provides an intelligent workstation environment with online host relational databases operations. It communicates with the host(s) in a read/write mode. Workstations are automatically updated for changes in the database structures and can be centrally administered. macControl automatically writes the SQL commands necessary to perform user requirements. It operates within multirelational database and multihost environments and writes necessary commands, such as joins, data summations, etc., automatically. The product platform provides report writing, extensive graphics, complete spreadsheet capability, local multidimensional database, functions and macros, multiple levels of security, publish and subscribe, program launching, etc. All of these facilities can be used interactively with the host. macControl can run in a stand-alone, network, run-time, limited-host and a full host version. Services provided include consulting, design, prototyping, implementation, turnkey implementation, maintenance, software updates, training and a hotline.

Manage!
Computerized office
Macintosh with 68040 processor or larger or Power Macintosh; 8 MB of RAM; 5 to 10 MB hard disk space.

Manage!, "Value-Added" Software for the Professional Manager, is a comprehensive program for corporate business managers. Manage! enables managers to track PIM needs, such as to-dos, contacts, expenses, projects and sub-tasks, as well as establish and track key goals and apply business values to every activity. The Values system is at the heart of Manage! By applying a value to a goal or activity, the act is energized and improved far beyond its original potential. In addition, Manage! has a series of expert system components for tracking staffers and their activities and needs. Included are: Performance Review; Personality Analysis; Training and Skill Needs; and Coaching Requirements. At any point, users will have a complete profile of staffer's activities, performance, personality and training and coaching needs. A Manager Advisor is also included.

Now Contact 1.1
Full-featured contact management application
Macintosh Plus or larger; System 7.0 or later, native on PowerPC.

Now Contact is a complete contact manager that gives users instant access to names, numbers and addresses and integrates with Now Up-To-Date to create the ultimate personal organizer. Finding and sorting is significantly fast. Users choose from multiple customizable entry and list views to show as much or as little information as they need; edit and organize information directly in list view; and categorize and retrieve related contacts with a single command. Users can also create and print form letters, labels, envelopes, address books and more. Users just attach correspondence and related documents to each contact for instant retrieval and display, regardless of the application that originally created them. Plus, the QuickContact pull-down menu lists a user's most important contacts so that they're always available, even when Now Contact isn't running.

Paper Trail
Helps organize and cross reference paper documents
Macintosh Plus or larger.

This may be the electronic age, but paper isn't going away soon. Most people's inbox is always full and their drawers are crammed with tons of documents. Paper Trail helps users organize and cross reference all of this paper. Using key words, brief descriptions and file folder references, Paper Trail helps users find existing documents and organize new documents quickly. Users can set up "virtual folders" to make cross referencing easy. It even keeps track of what users send out and to whom they send it. In addition, users can set follow-up dates for documents so they'll never miss another important deadline again.

Power Team
Phone book, calendar/to-do, correspondence, checkbook, calculator, expense report, mailing list
Macintosh Plus or larger; 1 MB of RAM.

Power Team provides users with all the tools they need to keep organized in one simple, integrated package: phone book, calendar/appointments/to-do list, correspondence, checkbook, expense reports, calculator and mailing list. All of the tools work together seamlessly. Names and addresses are automatically typed into letters, the calendar automatically reminds users when bills are due and much more. The Power Team's visual interface and online help make it a snap to learn. Complete documentation includes a step-by-step tutorial and handbook with more than 300 illustrations. The Power Team helps make data entry easier, faster and more accurate. Natural Fields let users enter data in the format most convenient for them. The Power Team even automatically capitalizes for users. Clairvoyance completes entries for users after they have entered only a few characters. The Power Team prints labels, cards, individual and form letters, envelopes (including PostNet bar codes), calendars, checks and organizer notebooks. Users can even create their own printing templates with the built-in graphic editor. Smart Merge automatically synchronizes separate copies of users' Power Team files on different computers. The Power Team can sort more than 1,000 records per second, and finds information almost instantaneously. Efficient data storage reduces disk space requirements up to 75 percent. The Power Team allows data transfer to/from virtually all other organizer and database programs.

PowerPages
Contact management
Macintosh Classic or larger; 4 MB of RAM; 20 MB hard disk drive; System 7.0 or later.

PowerPages is versatile contact management software. It is ideal for workgroups who must share contact information, especially if they need to access that information from remote sites. Because of its client-server technology, PowerPages is a perfect companion to AppleTalk Remote Access. Remote users can dial up to PowerPages and access information at incredible speeds, even over 2400-baud modem connections. This eliminates data synchronization problems because everyone uses the same database. PowerPages satisfies the needs of workgroups. Every user has a password, so data is always secure. Access privileges can vary from user to user, so users control who gets to add, modify, delete, print, import and export records. Moreover, PowerPages invisibly logs all database activity, so users can audit any user's activity at any time.

Rae Assist
Personal information assistant software
Macintosh Plus or larger; 2.5 MB of RAM; 5 MB of free hard disk space; System 6.0.7 or later; 640 by 400 pixel screen size.

Rae Assist is personal information assistant software for PowerBook and Macintosh computers. Rae Assist helps users easily manage their business and personal contacts, schedules, to dos, projects, notes and pictures in one convenient and highly integrated application. Users can freely link and categorize all their information to stay organized, and a Smart Assistant finds, links and creates information to save users' time. Rae Assist organizes information in a simple yet powerful electronic binder with interrelated sections for People, Companies, Planner, To Dos, Projects Items and Smart Index. Users can easily list and sort information in each section or across sections using the Smart Index. Mini-views and navigational features, such as Find and Recent, make it easy to locate information from any section.

Select Phone
Telephone directory
Macintosh with 6 MB of RAM; CD-ROM drive.

Select Phone is a comprehensive, completely cross-referenced telephone directory on CD-ROM containing 72 million residential listings and 8 million business listings. The nation is broken down into four regional discs: East, South, Midwest and West. Each disc contains the residential and business listings for its region. The product's 32-bit retrieval software has been optimized to allow searches by name, SIC code or business heading, telephone number and address. Select Phone also sorts by: address to display the neighbors of a highlighted listing; telephone number to see if another listing shares the same telephone number; and name to detect other listings with the same name if the search was initiated by address, telephone number or type of business. There are no restrictions on the use of the data, and information can be output to disk, printed or, with a modem, a listing can be automatically dialed.

■ **ShellSystems 4.0**
Small business and personal management
Macintosh with 68020 or larger processor; 8 MB of RAM; System 7.0 or later; hard disk drive.

ShellSystems is customizable, modular software solutions for small business and personal management. Each base shell is an intuitive system of list, selection and data entry windows driven from a main "Shell-Station" window by custom buttons with a pull-down menu, allowing easy interactivity.

ClientBase is the foundation database for information management. Users can customize an unlimited number of name categories; name info includes multiple addresses and phone numbers, up to 10 categories per name, tickler info and more; select names or companies by category; choose mail labels and directories by various selection criteria; and maintain a conversation log.

With HomeBase, users can customize personal income sources and household expenses; record bills, checks and deposits; log personal income and expenses; and maintain a personal bank balance, deposit history and check history. Users can also stay on track with BudgetBasics. Reminders, tasks, conversations, objectives, calendar and notes & ideas will help keep users organized and more productive.

OfficeBase gives users everything they need to know about their small business without complicated terms, leaving the accounting to the accountant. Users can customize income and expense accounts, enter items and prices and keep track of "money comin' in" and "money goin' out" (orders, receipts, receivables, deposits, POs, disbursements, payables and checks). Cash Flow Basics is a quick and easy way to see where a business stands. A purge facility deletes old information and numerous reports and forms can be generated.

Simplifiler
Executive information management and contact follow-up system
Macintosh Plus or larger; 1 MB of RAM (2.5 MB recommended); hard disk drive.

Simplifiler is an integrated relational database application that stores, retrieves, organizes and schedules comprehensive information about contacts, people, companies, organizations and products useful to a user's business, professional, community and personal affairs. Simplifiler notifies users to follow-up tasks and contacts. It automatically carries out user-designated sequences of mailings; prints contact reports, appointment lists, labels and name tags; can print records in 3 by 5-inch card format; searches/sorts 260 fields; prints/exports letters and memos; integrated mail merge; alerts users to regular meetings; creates directories/phone lists; imports/exports records; and stores alpha, numeric, date, text and picture data. Simplifiler handles thousands of records and works with multiple users, making it an excellent customer, prospect and/or vendor database. Organizations can manage and maintain member, committee, sponsor, activity, fund raising and vendor information.

SkillFinder
Personnel experience information system
Macintosh Classic II or larger; 2 MB of RAM.

SkillFinder is a quick and user-friendly database program to catalog skills and experiences of employees, consultants, job applicants or clients. It reduces overhead costs by providing fast and efficient proposal development, work assignment and applicant retrieval. It supplements resume and key word search systems by providing greater search flexibility on more precise information. Features include: multiple criteria in same search, with every data field in all records available for search; mark matching records; view or print reports of single or multiple sequential searches, showing all search criteria and the relevant matching record information; save results of any search for later retrieval; user-friendly operations in either single or multiuser mode; lets users set up their particular database structure to satisfy their skills inventory and tracking needs; produce summary, statistical and company demographic reports; complete record and record update form; and five security levels. No programming is necessary to use all the capabilities.

Snow Report Writer For Macintosh, Standard Edition
Allows users to gather data from multiple sources in a variety of formats and generate documents
Macintosh Plus or larger.

The Snow Report Writer can be used to easily gather data from multiple sources in a variety of formats and generate simple to sophisticated documents in minutes. Users lay out their report as they would any word processing document; bring in data fields using simple menus and dialogs; and directly manipulate the data (calculations, conditionals, sorting, selections, etc.) as they lay out the report without modifying the data in any way. It is ideal for presentation-quality reports. The Snow Report Writer can also be used to transfer data from one format to another or as a front end for database queries. Also available for DOS and Unix, the Snow Report Writer is especially useful for any manager in a corporate environment and indispensable for simplifying work in Information Systems groups.

Survey Maker
Scores survey-type questionnaires and election ballots
Macintosh Plus or larger.

Survey Maker is a free-standing application designed to interface a Macintosh computer with an Optical Mark Cardreader for the purpose of scoring survey-type questionnaires and election ballots. It can read information from regular or specially designed data cards that can be marked in the common A, B, C, D, E and "No Response" format. The program allows users to open a file and type in a survey questionnaire, along with the desired responses. An ideal response for each item can be marked, if applicable. The program summarizes the responses and prints a histogram of the results. An ASCII or text file of the results may be written to disk and subsequently used in a spreadsheet or word processor. MacSurvey is compatible with the Discus Data Systems model CR510 and the Chatsworth model OMR 1000 and OMR 200 optical cardreaders. These cardreaders use a standard 3.5-inch wide data card marked with a pencil.

Integrated Software

All-IN-1 DESKtop For Macintosh
Integrates with the services provided by Digital's All-IN-1 IOS product
Macintosh Plus or larger; 1.5 MB of RAM; System 6.0 or later.

All-IN-1 DESKtop for Macintosh is a software package that integrates with the services provided by Digital's All-IN-1 IOS product. It offers mail, file and application integration between the dissimilar Macintosh and All-IN-1 environments. By combining the main components of the desktop, such as communications, scripting language and built-in desktop applications, it is possible to extend the functionality of the Macintosh via the centralized user interface. Such extensions provide VT320 terminal emulation, access to commonly used third-party products, message-based applications (MBAS), document conversion and directory management. Customization options are available to provide additional features to users. All-IN-1 DESKtop for Macintosh addresses the needs of two different styles of computing: the Macintosh user who requires access to the services of All-IN-1 IOS, its business applications and the enterprise-wide mail network; and the All-IN-1 IOS user who wishes to integrate Macintosh computers into an already established All-IN-1 IOS environment, and easily take advantage of Macintosh applications.

Excellent Exchange
Excel template clearinghouse
Macintosh 512K or larger; Microsoft Excel.

Excellent Exchange is a software clearinghouse that provides a marketplace for Microsoft Excel users in search of specific programs. It also serves as a marketing outlet for authors of Excel-compatible programs. Hundreds of programs in business and scientific fields are available through the service, and new listings are continually being added. For most programs listed, there is an inexpensive ($2) demo version that provides potential users with a try-before-you-buy option, and Excellent Exchange's software authors are often available to provide customized programs that fit specific user requirements.

GreatWorks 2.0
Integrated software
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.2 or later.

GreatWorks is an integrated program that includes eight full-featured application modules: word processor, database, spreadsheet, chart, draw, paint, outline and communications. It combines a breadth of functionality, a high level of integration among application modules, a consistent user interface and extensive online help. Menu commands, tools and other common features look and work the same throughout the program. Features such as multiple column documents in the word processor, a powerful forms generator in database and more than 60 combination chart types in chart provide full functionality for new or seasoned users. Each module is supported by common technologies that speed learning and simplify usage. Once a feature is learned, it is used the same way in every other module. Common technologies include standard text and graphics engines, a 100,000-word spell checker with custom dictionaries, a 660,000-synonym thesaurus, five units of measurement and

Novell Symmetry 4.1 For Macintosh
Electronic mail, calendar, scheduler
Macintosh Plus or larger; 1 MB of RAM (2 MB and hard disk drive for server); AppleShare.

Novell Symmetry combines the power of electronic mail, personal calendaring and group scheduling into a single application — one executable. Under a powerful desktop, all messages, including E-mail messages, personal and group appointments, scheduled tasks and notes, can be accessed and viewed in one customizable interface. Novell Symmetry also includes rules-based message management, workflow automation, ordered distribution, task management and global calendaring functionality. Novel Symmetry introduces a fully distributed directory service database. The directory service provides a common database representation that does away with the limitation of differing platform file formats. This new design, combined with an intuitive administration front end, greatly simplifies the set-up, configuration and maintenance of the Novell Symmetry system. Central, distributed and remote system administration options bring greater flexibility and ease of use to administrators.

RagTime 3
Integrates word processing, spreadsheet, business graphics and desktop publishing capabilities
Macintosh Plus or larger; 2 MB of RAM recommended; hard disk drive.

RagTime 3 dynamically integrates the most common office tasks in one software package. It combines a powerful word processor, extensive spreadsheet, document layout tools, picture frames and a wide array of graphs, all on any page of a document. Most of RagTime's frames can be hot-linked to each other. Any changes that users make in one frame will automatically be reflected in the others. Frames can float with the text, and text can be made to wrap around any frame type. Any frame type can be rotated, made visible or transparent. Beyond its own internal integration, RagTime also accommodates a variety of external modules, such as database links, connections to measurement equipment, scanning facilities and drivers for various output devices. By automating office forms in RagTime, users can produce just the documents they need, from standard letters to intricate brochures. Quality and uniformity are assured.

WordPerfect Works 1.2 For Macintosh
Word processor, database, draw, paint, communications and spreadsheet
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.5 or later.

WordPerfect Works for Macintosh is an integrated program that features the following six modules: word processor, database, draw, paint, communications and spreadsheet with charting. It includes In-Context Editing, which lets users make changes to linked data from any module without leaving the module they are working in. Irregular text wrap flows text around the contour of a graphic in the word processor. The common toolbar is shared between all modules with module-specific tools for additional ease of use.

Mail Management

1stVue
Form completion and multiuser database
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.

1stVue II provides the tools required for users to set up applications via forms and files. 1stVue is a form completion and multiuser database that includes a unique graphic forms interface with multimedia capability. It is designed for use with 1stBase-II, a relational database and report generator. By using 1stVue II with optional DataModeler and 1stBBS-II, users can create a form with 1stVue II and send it to customers with 1stBBS-II. Customers then fill out the form with DataModeler and send it back with the files attached using 1stBBS-II. Clairvoyant Posting gives users the ability to simply open the form with 1stVue and customers' data is automatically added to the database. Customers view their orders with 1stBBS-II's database lookup feature. 1stVue II features patented Fuzzy Find over weighted fields and MacroAccess Command icon system automation. 1stVue II supports 12 different kinds of data filters, including documents, sounds, pictures and QuickTime movies. The 1stVue II database is automatically generated based on the form's attributes. 1stVue II's numerous display and entry filters provide users with an efficient way of entering and displaying all of their business information. It is System 7 compatible.

AccuZip6
Comprehensive database manager and bar-coding software
Macintosh SE/30 or larger; 4 MB of RAM; hard disk drive; System 6.0.5 or later; CD-ROM drive.

AccuZip6 is a customizable database manager for individuals, businesses and entrepreneurs. Its powerful management features include a custom report and label generator, high-speed indexed searches, nth selecting and duplicate detection. AccuZip6's integrated word processor can merge to custom letters and envelopes or to existing documents in other programs. AccuZip6 comes with a free CASS CD-ROM that corrects addresses and adds a ZIP+4, CRRT and DPBC barcodes to each address. Finally, when users are ready to mail, AccuZip6 presorts and prints the reports, forms, tags and endorsements for first-, second- and third-class mailings. AccuZip6 provides a complete, comprehensive, versatile and powerful software to save users time and money. AccuZip6 is an integrated database manager, coding accuracy, telemarketing and mailing software.

Bulk Mailer C.A.S.S.
Coding Accuracy Support System for mailing list files
Macintosh Plus or larger; System 6.0.7 or later.

Bulk Mailer C.A.S.S. is a Coding Accuracy Support System (C.A.S.S.) for mailing list files. Bulk Mailer C.A.S.S. will automatically correct street addresses, as well as add Zip+4 and Car-Rt information. By using USPS approved C.A.S.S. software, mailing pieces will qualify for additional postal discounts. These discounts can bring mailing costs to as low as 13.1 cents per piece. Users can use Bulk Mailer C.A.S.S. with files maintained by Bulk Mailer, or with files generated from other packages (such as FileMaker) in a text file format. Bulk Mailer C.A.S.S. comes on a CD-ROM and covers

the entire United States. The information is licensed from the Postal Service and is updated quarterly.

EZ Shipperz For FileMaker Pro
Automated Shipping system
Macintosh LC II or larger; hard disk drive; FileMaker 2.0 or later; System 6.0.5 or later.

EZ Shipperz For FileMaker Pro is a FileMaker Pro shipping system that allows users to simultaneously monitor and choose from multiple shipping costs right on their entry screen. Users can compare all UPS, Federal Express, Airborne and US Mail rates, then choose the most cost-efficient ship method from a simple pop-up menu. City, state, eight different rates and all five zones are automatically looked up when users enter an address and any Zip code (contains more than 40,000 Zips). Weights of contents and cartons may be calculated automatically or manually. EZ Shipperz prepares packing slips, shipping labels, Expected Shipping Schedules, an approved UPS Host Manifest and Summary, required by UPS and more. The package also includes UPS Approval documentation. Simple documentation is provided to help users set up necessary lookups in this system to use with their existing FileMaker Pro invoicing files, as well as other systems, such as Biz Basics EZ.

KiwiEnvelopes! Version 3
Desk accessory for printing envelopes
Macintosh 512KE or larger.

KiwiEnvelopes! is a desk accessory optimized to address and print envelopes without leaving the current application. Addresses copied from a letter in a word processor are automatically pasted in KiwiEnvelopes! Often used return addresses, mailing addresses and messages can be saved to a default file for instant retrieval. Logos or any other graphic can also be used. KiwiEnvelopes! provides a WYSIWYG preview and saves a user time by bypassing the usual print dialog boxes. Address typeface, size and style are user definable. On laser printers, the program can print USPS-tested bar-code markings to expedite a user's mail to its destination.

MacSys Pro-Filer
Mailing list management system
Server requires Macintosh SE/30 or larger; 8 MB of RAM; 80 MB hard disk drive. Client requires Macintosh Plus or larger.

The MacSys Pro-filer is a 4th Dimension-based client/server mailing list management system. Originally designed for an NHL Hockey Club's promotional office, the system provides powerful boolean search functions for targeted mailings based on user-defined criteria (using matching algorithms based on any combination of field or keyword variables). This system prevents duplicate mailings, imparting substantial savings to any organization with high volume mailing. Input Field criteria can be configured by a user. The system will print mailing labels or envelopes in most formats using any Macintosh-driven printers. The MacSys Pro-filer features a mail merge function using a built-in word processor. This system maintains a record of correspondence, including search capability by correspondence. The MacSys Pro-filer will print detailed lists based on any search criteria. The MacSys Pro-filer is customizable as required.

Mail•Dex 2.0
Desk accessory that prints envelopes and labels
Macintosh Plus or larger; System 5.0 or later; printer.

Mail•Dex is a desk accessory that stores and retrieves addresses, phone numbers, recipes and more using a familiar Rolodex-type cardfile. Users can create as many cardfiles as they need or want — they'll always be available from a single menu. Users can search for anything — even a partial name or phone number, and instantly see the information.; print on envelopes or labels using any font in their system, either print all cards or only the one(s) needed. A layout editor helps users precisely place labels of any size anywhere on a page (two-across, three-across, etc.). Mail•Dex will print a user's return address on plain envelopes, and even a memo line on the lower-left corner. Mail•Dex works with System 7 and has been accelerated for Power Macintosh.

■ UPS Mailbox
Shipping information
Macintosh Plus or larger (68030 processor recommended); 2 MB of RAM; System 6.0 or later (System 7.1 recommended); hard disk drive.

UPS Mailbox allows businesses to process shipping orders for letters and packages to any of the 48 continental states, Hawaii, Alaska, Canada, Mexico and more than 200 selected International Countries. Specific template sets are required for each area (State and Zip Code area), as well as Alaska and Hawaii. The program consists of eight files. Users only need to contact their local UPS representative for requirements for local approval. UPS Mailbox has been approved for use in Arizona for Zip codes 85001 to 85199. The user's local UPS may contact Arizona UPS if there are any questions. All charts are designed to the 2/94 or 11/93 UPS revisions. Later releases of new updates may require modification to the lookup files and value lists in the program.

Miscellaneous Management

■ ActiGraf
Business process reengineering
Macintosh Quadra or larger; 4 MB of RAM; 5 MB of free hard disk space; System 7.0 or later.

ActiGraf is a new concept in enterprise modeling: dynamic behavioral process modeling. ActiGraf augments static process modelers with a representation that describes how the process will behave. Analysis is accomplished by graphically representing the tasks that comprise a business activity or process indicating the behavior of the task execution. Dynamic analysis follows the task flow directed by the behavior. ActiGraf employs a powerful, simple graphical language to describe the behavioral relationship among and between the steps that make up a process. This view of the enterprise complements data modeling and IDEFO analysis. ActiGraf models contain information that can vary the procedure paths dependent upon dynamic conditions. The behavior can be analyzed by simulating the conditions that determine the execution of a process. ActiGraf provides two modes, an IDEFO diagram mode and the ActiGraf graphical language, to capture the behavioral view and provide a dynamic analysis of the process.
$795 retail
Business Modelling Systems; 101 First St., Ste. 424; Los Altos, CA 94022; 415-941-3901 (phone/fax)

AffiniFile 1.1
Fast access to notes and graphics
Macintosh 512KE or larger.

AffiniFile is designed to help a user keep notes, store graphics and find information quickly — starting with an automatic index. This desk accessory files a user's notes and graphics by topic or subtopic. The program works like a notebook, tied to a scrapbook, centered on an index. Features include: a user may create as many AffiniFiles as needed; each AffiniFile may include hundreds of topics and subtopics — automatically sorted in the Topics index; each topic may include up to 5,000 words of notes and a full page of graphics; "Cross-reference" shows related topics in the "See also..." window; "Alias Link" lets a user add synonyms to the Topics index; AffiniFiles can be selected to open as default files in specific applications; for help files, the program can be set to always open with the first topic selected, and in locked mode; for notes files, the program can be set to always open with the last reviewed topic selected, and in unlocked mode; compare between two topics; and more. "Customs" is the program's import/export/merge utility to share files with other programs. It allows a user to export or import between More files, text files or databases; merge multiple AffiniFiles into one; and more. Additional features include the ability to print the whole file (with graphics) or print selected topics; change typestyles or sizes, as well as select among more than a dozen options; search through the Topics index, the Notes window or both; include a graphic of up to 32K with each topic or subtopic; and time stamp and date stamp topic names or notes.

Aspects Document Collaboration System
Groupware for real-time document conferencing
Macintosh Plus or larger; AppleTalk-compatible network, modem, ISDN or Internet.

Aspects provides a powerful shared workspace for almost anyone — whether they are in a conference room, classroom or at 16 different sites around the world. Aspects lets a group of people work together on the same document at the same time, and see each other's changes as they happen. Everyone can see the document, anyone can make changes to it, and those changes are immediately visible to everyone. It runs on any Macintosh computer linked with a modem or AppleTalk-compatible network connection. With appropriate hardware or software, Aspects can also be used with ISDN, video conferencing and the Internet.

The Computerized D.O.T.
Occupational information
Macintosh Plus or larger; 1 MB of RAM; 6.5 MB of hard disk space.

The Computerized D.O.T. brings the Dictionary of Occupational Titles (D.O.T.), the most definitive source for occupational information, to a user's fingertips and provides a fast way of finding occupations. Users enter a word describing an occupation and see a list of matching titles in seconds. Or, users can search by interests, industries or D.O.T. clusters. When a suitable occupation is found, users click on it, and the definition is displayed to be read or printed. The Computerized D.O.T. Plus adds the Worker Traits (selected characteristics) on both the list of matching titles and along with each definition.

In/Out 1.0.2
Electronic people tracker
Macintosh 512KE or larger (user software); Macintosh Plus or larger (server software); hard disk drive; System 6.0.4 or later.

In/Out is an office-oriented network program that allows users to check "in" or "out" so co-workers and switchboard operators will know where everyone is. A feature of In/Out allows users to leave notes or memos, such as "Gone to the Dentist," "Be back at 1:00" or "Gone Home." User-defined memos can be selected or users can create or type a different message. In/Out also automatically dates and time stamps when a user checks in and out. An additional feature automatically notifies users when someone they wish to speak to arrives. The notification can occur through a pop-up box or flashing icon. In/Out is efficient and easy to use. It's accessible from a single keystroke and a user-set preference causes In/Out to pop-up on the screen upon startup and again at shutdown if desired.

Instant Update
Live documents for groups
Macintosh Plus or larger; System 6.0.4 or later; network.

Instant Update is a collaborative application for Macintosh networks that helps users communicate through live documents and allows them to manage groups and activities in one forum. Users create live documents just like any word processing document, and then distribute the document to other users on the network. By pressing the Update button when there is a black "incoming" arrow, any changes, feedback or status updates that were made to the document are automatically incorporated into a user's copy. Users can constantly stay on top of all people and projects in their group. All of a user's live documents are organized in the Document Manager portion of Instant Update. The program is System 7 compatible.

MacManager
Management simulation
Any Macintosh.

MacManager is a realistic, competitive management simulation designed to improve a user's strategic management skills. By making business decisions based on financial data, users try to maximize a hypothetical company's profits. Rather than simply displaying columns of numbers, the program uses the Macintosh's graphics capabilities to enable a user to view production, observe plant capacity and monitor inventory. The program includes the ability to save a game in progress, as well as view each player's office at the conclusion of the game.

Office Tracker Pro
Group scheduling and in/out tracking
Macintosh Plus or larger; System 7.0 or later.
Office Tracker Pro is a System 7 savvy in/out tracking and group scheduling system for people, places and things. It lets users create multiuser in/out boards where co-workers, managers and receptionists see at a glance which people (or resources) are "in" or "out," when they left, when they will return, where they went and messages, such as "Out to lunch" or "Direct calls to Joan." Users can sign in and out with a simple keystroke and set times to sign in or out automatically. An optional notify feature alerts users when selected items return. Items are represented by name and color icons: person, car, meeting room, computer, etc. Additional information, such as phone extensions or serial numbers, can be added. Display options let users customize the look of boards. Items can be sorted by name, type, return time, etc. Auto-logging lets users track the in/out activity for any period of time.

Performance Mentor 2.0
Desktop management advisor
Macintosh Classic or larger.
Acting as a manager's personal advisor, Performance Mentor supports the people management responsibilities critical to business productivity. Corporate managers can now consult this desktop advisor on daily employee management issues, from coaching and setting objectives to performance feedback and appraisals. Using proven management principles and custom profiling, the program provides managers with unbiased advice for their specific situation based on the experience of management experts. Using a series of descriptive terms, Performance Mentor first profiles both the manager's and employees' style of operation and their working environment. The program then acts as a consultant by asking questions and formulating impartial, unemotional advice on how to best approach a particular employee and handle the performance discussion. Explanations for each piece of advice are available. These explanations allow a manager to confirm the reasoning behind recommendations and the appropriateness of certain advice for specific situations.

Place-Name-Index
More than 1 million place names
Macintosh Plus or larger; 1 MB of RAM; CD-ROM player.
The Place-Name-Index offers quick and convenient access to more than 1 million place names collected from the quadrangle maps of the U.S. Geological Survey. Every state is included, plus the District of Columbia. The CD-ROM contains the names of populated places, hospitals, schools, cemeteries, airports, churches, beaches, lakes, rivers, valleys, trails, canals, parks and more. Each of the records contain: place name, state, county, feature type (lake, church, etc.), FIPS code (state/county), elevation (when available), longitude and latitude and quadrangle map name. The Place-Name-Index data was indexed with TextWare, which allows high-speed full-text searching of the database.

RateFinder 2.1
Multicarrier shipping/mail price shopping
Macintosh with 4 MB of RAM; hard disk drive.
RateFinder compares many different carrier's rates for the same package in one easy operation. It comes with complete worldwide entries for UPS, Federal Express, U.S. Mail and sample Airborne Express rate tables. Users can update entered carriers and add new carriers and service/classes. Note fields for each carrier/class expand to a full page of information. Shipments can now be logged with indexed references to one-inch ship address labels printed. RateFinder 2.1 contains carrier/zone charts for shipments originating in the continental 48 states. Significant savings can be realized in a very short time. When shipping to some destinations, RateFinder can pay for itself in one decision. The Rate Totals screen lets users add special costs, such as COD or Saturday Delivery, to the base package rate. RateFinder knows about weight limits for each carrier/class and most special services, such as Pick-Ups, Insurance, Registered Mail, Return Receipts, etc. RateFinder also includes a Dimensional Weight Calculator and stores shipment records and prints labels. On-screen interactive alerts in the Rate Ship and Rate Totals windows guide users through operations. For updates, RateFinder Datazine periodical subscriptions are available to registered owners.

Sticky Notes+ With J&B Home
Software emulation of 3M Post It notes; Home stack replacement
Macintosh Plus or larger; 1 MB of RAM; HyperCard.
Sticky Notes+ is a software emulation of 3M Post It notes. Users can create pop-up notes on any card, in any HyperCard stack via simple commands. They can create either a separate note card or a local pop-up field. To-do lists, notes for follow-up and comments to others can be put in hidden pop-up fields or in separate note cards. A small icon will appear on the card the note is created from. Users simply drag the icon around to the desired position on the card. Sticky Notes+ will automatically create all of the script, buttons, fields and cards to accomplish this. The note cards that are created are automatically linked to the card they were created from.
J&B Home replaces the original home stack that is supplied with HyperCard. The stack is organized into seven index tab sections. Each section can be custom named to organize files and stacks, providing more than 40 separate cards. Buttons are automatically created to launch an application, document or stack, and can be positioned by dragging them as in the Finder. They can also be deleted by using option click. This stack has all of the original Apple icons already installed.

Sun Clock 4.0
Graphically displays the areas of day and night on a map of the world
Macintosh Plus or larger; 1 MB of RAM; System 6.0.5 or later.
Sun Clock displays the areas of day and night on a beautifully-drawn, colorful map of the world as seen from space. The "night shadow" moves across the map to keep pace with the day's progress, and changes shape with the seasons. Sun Clock is available as a desk accessory, a Pyro! module and an After Dark module. The desk accessory can be displayed as a large (Macintosh Classic-size) or small (1.5 by 1-inch) window. Local time readouts can be placed on the map in the large window. Associated with each location readout is a notepad for phone numbers, etc. A distance function allows users to click on two locations and get the distance between the two. The night shadow for dates other than the current date can be displayed. The screen saver modules fill the screen, but do not support local time readouts or the display of other dates. The desk accessory color map needs at least 8-bit color, otherwise a black and white map is displayed. The screen saver modules require 8-bit color and cannot run in black and white.

Operating Systems

A/UX 3.0.1
Implementation of Unix operating system
Macintosh SE/30, IIx, IIsi, IIcx, IIci, IIfx, II (with PMMU upgrade), Centris 650 (with FPU) or Quadra 700, 800, 900, 950; 8 MB of RAM; hard disk drive.

A/UX, Apple's version of the industry standard Unix operating system for the Macintosh computer, gives users access to the intuitive Macintosh desktop within the Unix environment. With A/UX, users can simultaneously run multiple Macintosh productivity applications, Unix applications, X-Window System applications and MS-DOS applications (using SoftPC from Insignia Solutions) on one desktop. A/UX 3.0, Apple's latest version of Unix, offers customers new features: it further integrates Macintosh power and ease-of-use features, ranging from full System 7 functionality to support for the high-performance Macintosh Quadra computers, with industry standard Unix; integrates QuickTime, the revolutionary extension to Macintosh and A/UX system software products that provides multimedia capabilities, such as sound, video and animation; and is the stepping stone for a smooth migration path to the PowerOpen environment — a new, open-systems environment created by Apple and IBM's recent alliance that will offer customers and developers an easy-to-use, standards-based, high-performance system.

Chinese Language Kit
Brings multilanguage capabilities to Macintosh users
Macintosh with 5 MB of RAM; hard disk drive with 10 MB of free space (17 MB to install both Traditional and Simplified characters); System 7.1 or later; CD-ROM drive to use included TrueType fonts.

The Chinese Language Kit makes it easy for people to work in Chinese and English (or other languages). It allows users to input, edit and display Chinese characters without having to use a fully localized Chinese version of the Macintosh operating system. The Chinese Language Kit is based on WorldScript, which provides system-level support for the most widely used written languages and a unified platform on which developers can create applications for worldwide markets. The Chinese Language Kit supports both Traditional and Simplified characters. It includes bilingual documentation, TrueType fonts and a wide variety of input methods, including the most popular — Pinyin and Zhuyin.

Japanese Language Kit
Lets users write and edit with Japanese characters
Macintosh Plus or larger; 4 MB of RAM (5 MB recommended for multiple applications); hard disk drive; SuperDrive; Japanese or WorldScript savvy application; System 7.1 or later.

The Japanese Language Kit can be used with Macintosh computers to run Japanese applications and include Japanese text in letters, presentations and reports. Users can also work with files created using KanjiTalk, Apple's Japanese version of the Macintosh Operating System. The Japanese Language Kit works as an extension to System 7.1. It does not translate text: however, it allows users to input, edit and print in Japanese using the current operating system. The Japanese Language Kit comes with two Kanji TrueType fonts, which offer high-quality output from any Macintosh-compatible printer. Documentation is provided in both Japanese and English. Users can type using either the Roman or kana keyboard layout.

Liken
Emulates the Macintosh environment on Unix workstations
Sun SPARCstation/Sun OS; HP Apollo 9000 Series 700; IBM RISC System/6000.

Liken is a software program that emulates the Macintosh environment on Unix workstations. Liken allows standard off-the-shelf Macintosh applications to run in an X window on the Unix desktop. Within the Liken environment, workstation users can move freely between native Unix and Macintosh applications, access Macintosh software and interact with Macintosh files on the network. Liken seamlessly links Macintosh and workstation users to Ethernet and AppleTalk networks. This allows Macintosh and Unix users to share files and databases, use software residing on Macintosh servers and exchange mail via popular Macintosh mail packages.

MachTen
Implementation of Berkeley's 4.3BSD Unix with Mach kernel
Macintosh Classic or larger; 8 MB of RAM; hard disk drive.

MachTen is an application that turns a Macintosh into a full-featured Unix workstation. It comes with more than 300 Berkeley 4.3BSD utilities and commands, the Internet protocols and NFS. With MachTen, users have the benefits of a networked Unix workstation combined with the benefits of the Macintosh user interface. MachTen multitasking enables Unix applications to run simultaneously with all the existing Macintosh applications. MachTen communications software enables a Macintosh to be a full Internet participant. The Macintosh can exchange electronic mail and transfer files with any machine that supports the TCP/IP protocol suite. MachTen distributed file system software lets users use any system that supports NFS as a file server. MachTen Berkeley network enhancements (rcp, rsh, rlogin) let users log on to other Unix systems and transfer information. Full software development environment is included.

Macintosh System 7 Pro
Macintosh operating system
Macintosh or PowerBook; 4 MB of RAM; hard disk drive.

System 7 Pro provides System 7, PowerTalk, AppleScript and QuickTime software in one package, helping users streamline their work and communicate with their colleagues more effectively. PowerTalk allows users to correspond and work with others using built-in mail and collaboration services. AppleScript is a system-level "macro" language that lets any user invoke prescripted automated tasks with the click of a button. With AppleScript, users can use their favorite off-the-shelf applications to create powerful, cost-effective custom solutions. QuickTime is Apple's industry-leading multimedia technology that lets users view, copy and paste video, animation, images and sound as easily as they manipulate text.

Macintosh System Software Version 7.1
Macintosh operating system
Macintosh Classic or larger; 2 MB of RAM (4 MB recommended); hard disk drive.

Macintosh System 7 strengthens the Macintosh computer's usability immediately with built-in features that automatically work with thousands of new and currently shipping Macintosh applications. Some of these features include a new Finder, or desktop, which makes using the Macintosh even easier; TrueType, which ensures sharp type quality at any size; File Sharing, which allows any user to share designated items with any other user over a network without a dedicated file server; Virtual Memory, which provides expanded availability of the computer's memory for programs; and Multitasking, which allows users to work with multiple applications and perform several tasks concurrently. Version 7.1 incorporates Apple's WorldScript technology, which provides inherent support for most written languages. It also provides built-in potential for multilanguage computing on the Macintosh.

QuickTime 1.6
System software architecture
Macintosh Classic II or larger; 2 MB of RAM; System 6.0.7 or later.

QuickTime is a system software architecture for the integration of dynamic media for Macintosh computers. It allows third-party developers to integrate dynamic media, such as sound, video and animation, in a consistent, seamless fashion across all applications. QuickTime provides breakthrough functionality and offers a standard platform for all Macintosh development, enabling developers to not only extend the capabilities of current applications, but also create entirely new categories of applications. These new categories include videoconferencing, store-and-forward video mail, low-cost video editing and dynamic CD-ROM magazines. The QuickTime architecture consists of four major components: system software, file formats, Apple Compressors and Human Interface Standards. These components form a software architecture that is extensible, open and offers cross-platform standards for dynamic data exchange. Version 1.5 offers higher compression ratios, which results in larger movie frame sizes and better frame rates. It also provides support for Kodak's Photo CD technology and full screen/full motion video with available add-on hardware.

QuickTime Starter Kit
Provides the fastest way to get started using sound, video, animation and compressed still images
Macintosh LC or larger; 4 MB of RAM; hard disk drive; System 6.0.7 or later.

The QuickTime Starter Kit provides the fastest way to get started using sound, video, animation and compressed still images on a Macintosh. When used with products that support QuickTime, users can cut, copy and paste QuickTime movies into documents and presentations as easily as they already work with text and graphics. The product includes four easy-to-use utilities that allow users to play movies (MoviePlayer),

compress still images to a fraction of their original size (Picture Compressor), convert existing content into movies (Movie Converter) and, with a video digitizer card, capture video movies (Movie Recorder). The QuickTime Starter Kit also includes QuickClips — a CD-ROM containing more than 400 MB of clip video, animation and high-quality still images, all indexed for easy browsing; and an electronic QuickTime product catalog listing more than 100 shipping products that are QuickTime savvy.

CharacterEyes
OCR software
Macintosh with 4 MB of RAM; 3 MB of free disk space.
CharacterEyes is an OCR software product that saves users time and money by eliminating the need to re-key information into their software applications. It enables users to scan in a document, analyze the page layout, recognize the text with unsurpassed accuracy and output that text to the application software — all with the click of a single button. CharacterEyes reads all Western European character sets and supports all major desktop scanners and image file formats, as well as HP Accupage. CharacterEyes uses advanced neural network technology, which enables the software to replicate the human brain's ability to recognize text. It excels at reading faxes, small typefaces, dot matrix text and degraded documents. It also ships with a trainable mode, at no additional cost, which allows users to teach the product to read obscure typefaces.

OmniPage Direct
Optical character recognition software
Macintosh II or later; 4 MB of RAM; hard disk drive; 300 dpi scanner; System 7.
OmniPage Direct is an easy-to-use, affordable, OCR software package for highly-accurate text recognition. It is designed to scan virtually any document directly into any Macintosh application, just as if it had been typed by a user. With Caere's AnyPage and Hewlett-Packard's AccuPage technologies, OmniPage Direct's automated user interface automatically sets the optimal brightness level for OCR on every region of a page, resulting in increased recognition accuracy on poor documents. Featuring Caere's AnyFont technology, OmniPage Direct recognizes nearly all non-stylized fonts ranging from 6 to 72 points at speeds of up to 2,000 words per minute, depending on the computer's speed. The software also reads 11 European languages and automatically separates graphics from text and numbers.

Optical character recognition software
Macintosh with 68030, 68040 processor or Power Macintosh; 5 MB of RAM; 15 MB of free hard disk space.
OmniPage Professional is optical character recognition software that provides users with significantly enhanced capabilities in customization, ease of use, accuracy and Macintosh System 7 power. Among the key features included in OmniPage Professional are: Caere's AnyFont technology, which enables scanners to recognize virtually any document, regardless of the number of typefaces or columns used; a pop-up Verification Window that provides complete text editing and allows users to edit a scanned document while simultaneously viewing a bit-mapped image of the original page; OmniTrain, special software that correctly recognizes suspect characters; support of HP AccuPage technology and AnyPage technology for Microtek scanners, which significantly improves OCR accuracy on documents, such as newspapers, stained pages and articles with color or shaded backgrounds; capable of scanning both text and graphics, the Graphic Editor can create black and white line art or continuous-tone images with up to 256 shades of gray; editing tools; upside-down recognition; and more.
$695 retail
Caere Corp.; 100 Cooper Ct.; Los Gatos, CA 95030; 408-395-7000, 800-535-7226 or 408-354-2743 (fax)

Optix OCR Engine
OCR engine for Optix Document Image Management Systems
Macintosh II family; Optix 4.0 or later.
Optix OCR is designed to integrate seamlessly with Optix Document Imaging and Electronic Document Management Systems. Optix OCR lets users OCR all or part of a page; OCR a single page or an entire multipage document; OCR as they scan or OCR later by searching the database and telling Optix which documents to OCR — automatically; use the unattended batch mode to OCR a batch of documents overnight, or during a lunch hour; have multiple workstations processing the same OCR queue (for multiuser Optix systems only); and specify areas of a form to OCR and have Optix automatically insert OCR'd data into index fields (Optix 4.0 or later is required).
$595 U.S. retail
Blueridge Technologies, Inc.; PO Box 430; Flint Hill Sq.; Flint Hill, VA 22627; 703-675-3015 or 703-675-3130 (fax)

Optix RISC-Based OCR Engine
RISC-based OCR engine for Optix Document Image Management Systems
Macintosh II family; Optix 4.0 or later.
Optix RISC-based OCR Engine is designed to integrate seamlessly with Optix Document Imaging and Electronic Document Management Systems. It lets users OCR all or part of a page; OCR a single page or an entire multipage document; OCR as they scan or OCR later by searching the database and telling Optix which documents they want to OCR — automatically; use the unattended batch mode to OCR a batch of documents overnight, or during a lunch hour; have multiple workstations processing the same OCR queue (for multiuser Optix systems only); and specify areas of a form to OCR and have Optix automatically insert OCR's data into index fields. The RISC-based OCR Engine is a NuBus board featuring a RISC processor capable of recognizing 80,000 characters a minute. Users can run up to four Optix RISC-based boards in parallel mode in a single NuBus chassis and achieve recognition speeds of up to 320,000 characters per minute (Optix 4.0 or later is required).
$5,995 U.S. retail
Blueridge Technologies, Inc.; PO Box 430; Flint Hill Sq.; Flint Hill, VA 22627; 703-675-3015 or 703-675-3130 (fax)

Read-It! O.C.R. Pro
Automatic omnifont and trainable optical character recognition for any scanner and hand-held scanners, respectively
Macintosh Plus or larger; hard disk drive; scanner.
Read-It! O.C.R. allows users to convert any Macintosh-compatible scanner into a sophisticated OCR system. The program is capable of automatically recognizing proportionally-spaced characters and standard monospaced characters. Predefined "type tables" for most popular LaserWriter, LaserWriter Plus, typewriter and ImageWriter typefaces, as well as OmniFont capabilities, allow Read-It! to recognize characters automatically without training. The program has the ability to learn from new typefaces, making it possible to recognize a virtually unlimited number of different fonts and styles, including foreign and special characters. Read-It! uses pattern-recognition algorithms that recognize serif and sans serif typefaces in varied sizes from 7 points to more than 48 points, even when mixed in the same selection. It also recognizes kerning and ligatures and analyzes context-sensitive properties of the text for possible errors and separates text from graphics automatically. The program can also recognize bold, underline and italic text (with proper training). A built-in intelligent dictionary and user dictionaries are included.
$595 retail; Read-It! O.C.R. Pro
$295 retail; Read-It! O.C.R. Personal for hand scanners
Olduvai Corp.; 9200 S. Dadeland Blvd., Ste. 725; Miami, FL 33156; 305-670-1112, 800-548-5151 or 305-670-1992 (fax)

■ **Recore 2.0 For Macintosh**
OCR engine for system and software integration
Any Macintosh.
Recore is a powerful function library with a high-level programming interface that controls and manages the recognition process. This includes recognition operation, session control and image and file management. Its small size (800 kilobytes, nominal) simplifies integration and speed execution. Recore features dual-engine architecture and offers the widest character recognition available — including 11 European languages. Recore uses Ocron's omnifont technology to recognize and retain text formatting and attributes, allows for manual and automatic zone specification and zone data typing. Written in C, Recore has a small code size and software-only composition that allow it to be easily integrated into other applications.
$3,995 retail
Maxsoft-Ocron, Inc.; 4110 Clipper Ct.; Freemont, CA 94538; 510-252-0200, 800-933-1399 or 510-252-0202 (fax)

TextBridge
Optical character recognition
Macintosh with 68020 processor or larger; 8 MB of RAM; System 6.0.5 or later.
TextBridge is OCR software that combines the highest level of document recognition accuracy with easy, one-button operation. Users can eliminate the time, expense and error of rekeying important documents. TextBridge lets users start with virtually any document — even those in less-than-perfect condition — and convert it to usable electronic text. Users then edit, store, search or distribute the text in their favorite word processor, spreadsheet or E-mail application. TextBridge can be used to cross over to accurate electronic text. TextBridge reads documents that contain mixed typefaces, graphics or multicolumns and provides unparalleled accuracy on faxes. The software recognizes text in 11 languages and also features a powerful Word Verifier, a TIFF Queue that allows users to process multiple TIFF files into one document and support for AppleScript and TWAIN.
$99 retail
Xerox Imaging Systems, Inc.; 9 Centennial Dr.; Peabody, MA 01960; 508-977-2000, 800-248-6550 or 508-977-2435 (fax)

TextPert 4.0
Optical character recognition software
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; scanner (optional).
TextPert captures and stores text from a wide range of media, including typed documents, newspapers, magazines, telephone directories, financial forms and more. It features universal omnifont recognition and intelligent page analysis, allowing the automatic transfer of information from almost any document into computer format without retyping. TextPert reads 32 Indo-European languages; tag and symbol insertion for easy transfer to databases and spreadsheets or interfacing with professional printing systems; and complete editing and printing commands for quick error correction and output. TextPert operates under

These Products Available Through Bottom Line Distribution
1-800-347-1923

MultiFinder and System 7, even in background mode. It supports direct image scanning by scanners from all of the following manufacturers: Abaton, Agfa, Animas, Apple, Canon, Datacopy, Dest, Epson, Fujitsu, Hewlett-Packard, Howtek, Marstek, Microtek, Mitsubishi, Panasonic, Pentax, Sharp, Ricoh, Siemens, The Complete PC and Toshiba.

CTA, Inc.; 25 Science Park; New Haven, CT 06511; 203-786-5828, 800-252-1442 or 203-786-5833 (fax)

TextPert Developer's ToolKit
Allows developers to include OCR technology in their software
Macintosh Plus or larger; 1 MB of RAM; System 7.0 or later; scanner (optional).

The TextPert Developer's ToolKit offers developers and integrators the capability to include CTA's optical character recognition technology in their software. The TextPert OCR engine uses omnifont technology to recognize text in any of 34 Indo-European languages in type sizes ranging from 6 to 72 points. The TextPert OCR engine supports numerous calls, including those that assist developers with automatic TIFF and PCX file input, image file manipulation, graphical user interfacing and defining areas of an image to be read as text. Richly commented example programs are included in each ToolKit. Version 2.0 features include: automatic forms detection; forms elimination; noise reduction; scanner input module; language module; and new text tags.
$1,200 retail
CTA, Inc.; 25 Science Park; New Haven, CT 06511; 203-786-5828, 800-252-1442 or 203-786-5833 (fax)

TypeReader
OCR software that reads any page of type, any type of page
Macintosh Classic II or larger; 4 MB of RAM; hard disk drive; System 6.0.5 or later.

TypeReader converts virtually any printed material into electronic formats for word processing, spreadsheet, database and page layout with incredible accuracy. It delivers Machine-Learned Fragment Analysis (MLFA), which allows TypeReader to recognize thousands of typefaces ranging from 5 to 64 points, stylized or non-stylized. TypeReader can even tackle degraded documents, such as faxes and photocopies. Features include: powerful What You Scan Is What You Get format retention (tables, columns, margins, tabs, type styles, sizes, etc.); easy to learn and use ("Auto" button for one-click recognition); recognition rate up to thousands of words per minute; and On-Screen Verifier for fast and easy proofing.
$495 retail
ExperVision, Inc.; 3590 N. First St.; San Jose, CA 95134; 408-428-9988, 800-732-3897 or 408-456-0823 (fax)

WordScan And WordScan Plus
Omnifont OCR/ document recognition software
Macintosh Plus or larger; 4 MB of RAM; hard disk drive; scanner.

WordScan and WordScan Plus for Macintosh are sophisticated, feature-intensive OCR software packages that incorporate accurate omnifont and page structure analysis technology. Both read a wide range of documents, including typewritten, dot matrix, laser print, typeset and facsimile. They capture text and graphics in a single pass. The structure of the original document is preserved, including margins, paragraphs, tables, lists, headers, footers, font sizes, bold and italic print and underscore. WordScan saves the document in many popular application formats, including Microsoft Word, WordPerfect, MacWrite, PageMaker and QuarkXPress. Additional WordScan features include a pop-up verifier, built-in dictionaries, automatic text and image clipping, multijob processing, style sheets and the capability to scan now and recognize later.
$295 retail; WordScan
$595 retail; WordScan Plus
Calera Recognition Systems; 475 Potrero Ave.; Sunnyvale, CA 94086; 408-720-8300, 800-544-7051 or 408-720-1330 (fax)

Programming Tools/Ada

Ada Binding To Posix
Enables Ada programs to make portable operating system calls
Macintosh II; Telesoft Ada compiler; A/UX 2.0.
Call for pricing
EVB Software Engineering, Inc.; 5303 Spectrum Dr., Ste. G; Frederick, MD 21701; 301-695-6960 or 301-695-7734 (fax)

Ada Binding To The Macintosh Toolbox
Enables Ada programs to call the User Interface Toolbox routines
Macintosh II; Telesoft Ada compiler; A/UX 2.0.
Call for pricing
EVB Software Engineering, Inc.; 5303 Spectrum Dr., Ste. G; Frederick, MD 21701; 301-695-6960 or 301-695-7734 (fax)

Ada Binding To The X-Windows Systems
Enables Ada programs to call the X Library User Interface routines
Macintosh II; Telesoft Ada compiler; A/UX 2.0.
Call for pricing
EVB Software Engineering, Inc.; 5303 Spectrum Dr., Ste. G; Frederick, MD 21701; 301-695-6960 or 301-695-7734 (fax)

Ada Binding To X.25
Enables Ada programs to send messages across a communications network using X.25
Macintosh II; Telesoft Ada compiler; A/UX 2.0.
Call for pricing
EVB Software Engineering, Inc.; 5303 Spectrum Dr., Ste. G; Frederick, MD 21701; 301-695-6960 or 301-695-7734 (fax)

AXI
Ada to X Window System interface
Macintosh II; A/UX.
Call for pricing
Advanced Technology Center; 22982 Mill Creek Dr.; Laguna Hills, CA 92653; 714-583-9119 or 714-583-9213 (fax)

Spencer Organization; 24 Wampum Rd.; Park Ridge, NJ 07656; 201-307-9099 or 201-307-9404 (fax)

Programming Tools/ Artificial Intelligence

AAIS Full Control Prolog
Prolog with high-level object-oriented features that allow Prolog programs to control windows, menus, buttons, other controls and interface features
Macintosh Plus or larger; 2 MB memory partition; hard disk drive.
$495 retail; educational and site licensing pricing available, as well as special direct prices
$199 retail; runtime distribution system for AAIS Full Control Prolog (no royalties; signed license and registered ownership of AAIS Full Control Prolog required)
Advanced A.I. Systems, Inc.; PO Box 39-0360; Mountain View, CA 94039; 415-948-8658 or 415-948-2486 (fax)

ALS Prolog/Macintosh 1.5
Prolog system
Macintosh Plus or larger; 2 MB of RAM; 128K ROMs; hard disk drive recommended.
$499 retail
Applied Logic Systems, Inc.; PO Box 180; Newton Centre, MA 02159; 617-965-9191 or 617-965-1636 (fax)

BioProp
Neural network simulation
Macintosh Plus or larger.
$250 retail; single end user, academic
$800 retail; single end user, non-academic
License agreement required
Office of Technology Licensing; University of California, Berkeley; 2150 Shattuck Ave., Ste. 510; Berkeley, CA 94704; 510-643-7201 or 510-642-4566 (fax)

Entrytec Professional 3.0
Shell for building software applications
Macintosh Classic or larger; 2 MB of RAM.
$149.95 retail; software only
$179.95 retail; Training Pak (combines book and software)
Albathion Software, Inc.; 302 Caledonia St.; Sausalito, CA 94965; 415-289-7599

EXSYS Professional 4.0
Expert system development tool
Macintosh Plus or larger; 2 MB of RAM.
$2,995 retail
EXSYS, Inc.; 1720 Louisiana Blvd. NE, Ste. 312; Albuquerque, NM 87110; 505-256-8356 or 505-256-8359 (fax)

■ **EXSYS RuleBook 1.0**
Builds expert systems using tree diagrams
Macintosh Plus or larger; 2 MB of RAM.

Expert systems are built using tree diagrams. Logic can be easily read by both developer and expert interviewees. As new nodes are added, branches are automatically built for all possible input values, prompting developers to consider all cases. This guarantees complete systems. Multiple trees are built representing independent aspects of a problem. Backward chaining and three confidence modes are supported. Clicking on a node brings up Balloon Help windows showing rules associated with the branch. A built-in "Expert" tests for development problems, such as incomplete branches, loop range errors, input that produces no conclusion and rules not used. Tracing, plus How and Why commands allow for rapid development. Custom screens, including multilevel hypertext help systems, can be added. A report generator allows conclusions to be printed. Systems can be run from RuleBook. Finished applications may be distributed using the no-fee Runtime License program. RuleBook systems are upwardly compatible with EXSYS Professional.
$1,495 retail
EXSYS, Inc.; 1720 Louisiana Blvd. NE, Ste. 312; Albuquerque, NM 87110; 505-256-8356 or 505-256-8359 (fax)

Flex
Expert system tool kit with frames, procedures and rules
Macintosh Plus or larger; 2 MB of RAM.
$1,000 retail
Logic Programming Associates, Ltd.; Studio 4, The Royal Victoria Patriotic Bldg.; Trinity Rd.; London, England SW18 3SX; +44-81-871-2016, 800-949-7567 or +44-81-874-0449 (fax)

GBB (Generic Blackboard Framework)
Framework for rapidly developing high-performance, blackboard-based applications
Macintosh II; 5 MB of RAM (8 MB recommended); hard disk drive; Macintosh Common Lisp.
$5,000 retail
$1,000 retail; educational
Blackboard Technology Group, Inc.; 401 Main St.; Amherst, MA 01002; 413-256-8990 or 413-256-3179 (fax)

Igor External Operations (XOP) Toolkit
Allows C programmers to create external operations to customize and extend the capabilities of Igor
Macintosh Plus or larger; MPW C or Think C.
$150 retail
WaveMetrics; PO Box 2088; Lake Oswego, OR 97035; 503-620-3001 or 503-620-6754 (fax)

ICONIX * INDUSTRIAL-STRENGTH * MULTI-USER *OBJECT-ORIENTED CASE TOOLS
* See listing under Programming Tools/CASE, or call (310) 458-0092.

MacBrain 3.0
Simulates neural networks; users can access library or create own arbitrary architectures
Macintosh Plus or larger; extra memory recommended for Plus.
$1,895 retail
$1,495 retail; educational
Site licenses are available
Neurix; 456 Putnam Ave.; Cambridge, MA 02139; 617-577-1202 or 617-577-1264 (fax)

Macintosh Common Lisp 2.0
Common Lisp programming environment
Macintosh Plus or larger; 4 MB of RAM; hard disk drive.
$495 retail; site licenses available
APDA — Apple Computer, Inc.; PO Box 319; Buffalo, NY 14207; 716-871-6555, 800-282-2732 or 716-871-6511 (fax)

MacObject
Object-oriented programming system
Macintosh Plus or larger; 2 MB of RAM.
$1,000 retail
Logic Programming Associates, Ltd.; Studio 4, The Royal Victoria Patriotic Bldg.; Trinity Rd.; London, England SW18 3SX; +44-81-871-2016, 800-949-7567 or +44-81-874-0449 (fax)

MacProlog
Applications development system with high-level ToolBox access
Macintosh Plus or larger; 1 MB of RAM.
$750 retail
Logic Programming Associates, Ltd.; Studio 4, The Royal Victoria Patriotic Bldg.; Trinity Rd.; London, England SW18 3SX; +44-81-871-2016, 800-949-7567 or +44-81-874-0449 (fax)

MacProlog Dialog Editor
Enables users to graphically develop interfaces for Macintosh applications
Macintosh Plus or larger; 1 MB of RAM.
$250 retail
Logic Programming Associates, Ltd.; Studio 4, The Royal Victoria Patriotic Bldg.; Trinity Rd.; London, England SW18 3SX; +44-81-871-2016, 800-949-7567 or +44-81-874-0449 (fax)

■ **MacProlog32**
Multiwindow development environment
Macintosh II or larger; 4 MB of RAM; System 7.0.
LPA MacProlog3 combines advanced AI programming techniques with the user-friendly interface and enhanced graphics of the Macintosh. MacProlog32 integrates a powerful Prolog compiler with the Macintosh philosophy of mice, menus, windows and graphics, and offers a rich and sophisticated programming environment, previously available only on expensive, dedicated workstations, combined with a compact, run-time delivery capability. MacProlog32 has been implemented completely in 32-bit assembler using the same engine as LPA Prolog for Windows. This guarantees a high degree of compatibility with both that product, Quitus Prolog on Unix and the emerging ISO and ANSI Standard. MacProlog32 has an attractive multiwindow development environment with graphical call-graph facilities and an optional run-time generator for producing double-clickable distributable applications; and interfaces to other programming languages, support for Apple Events and high-level ToolBox access for menus, windows, graphics and dialog creation.
$745 and up retail
Logic Programming Associates, Ltd.; Studio 4, The Royal Victoria Patriotic Bldg.; Trinity Rd.; London, England SW18 3SX; +44-81-871-2016, 800-949-7567 or +44-81-874-0449 (fax)

MacScheme
LISP programming
Macintosh Plus or larger; 1 MB of RAM.
$125 retail
Lightship Software, Inc.; PO Box 711; Dewey, AZ 86327; 602-632-7176

MacScheme+Toolsmith
LISP development system
Macintosh Plus or larger; 2 MB of RAM.
$495 retail
Lightship Software, Inc.; PO Box 711; Dewey, AZ 86327; 602-632-7176

MacSmarts 3.2
Expert system tool with Hypertext
Macintosh 512K or larger.
$195 retail
Cognition Technology Corp.; 1000 Massachusetts Ave.; Cambridge, MA 02138; 617-492-0246 or 617-492-0247 (fax)

MacSmarts Professional
Hypermedia-based expert system tool
Macintosh Plus or larger.
$495 retail
Cognition Technology Corp.; 1000 Massachusetts Ave.; Cambridge, MA 02138; 617-492-0246 or 617-492-0247 (fax)

Mahogany Connectivity Package
External functions to extend the power of Mahogany
Macintosh Plus or larger; Mahogany Professional.
$500 retail
Emerald Intelligence, Inc.; 3915-A1 Research Park Dr.; Ann Arbor, MI 48108; 313-663-8757 or 313-663-5284 (fax)

Mahogany Professional
Hybrid rule-based and object-oriented expert system development tool
Macintosh Plus or larger.
$495 retail
Emerald Intelligence, Inc.; 3915-A1 Research Park Dr.; Ann Arbor, MI 48108; 313-663-8757 or 313-663-5284 (fax)

Matlab Neural Network Toolbox
Neural network design and simulation
Macintosh with 68020 or 68030 processor/68881 or 68882 math coprocessor; 8 MB of RAM; Matlab.
Call for pricing; educational discounts available
The MathWorks, Inc.; 24 Prime Park Way; Natick, MA 01760; 508-653-1415 or 508-653-2997 (fax)

Moby Hyphenator II
Words with embedded hyphenation points in plain ASCII text
Macintosh 512K or larger.
$149 retail
Grady Ward; 3449 Martha Ct.; Arcata, CA 95521; 707-826-7715 (phone/fax)

Moby Part-Of-Speech II
Words and common phrases coded with their prioritized part-of-speech in English
Macintosh 512K or larger.
$299 retail
Grady Ward; 3449 Martha Ct.; Arcata, CA 95521; 707-826-7715 (phone/fax)

Moby Pronunciator II
Words and common phrases in English coded with their International Phonetic Alphabet equivalence
Macintosh 512K or larger.
$399 retail
Grady Ward; 3449 Martha Ct.; Arcata, CA 95521; 707-826-7715 (phone/fax)

Moby Thesaurus II
Contains root words, synonyms and related words and ideas
Macintosh 512K or larger.
$699 retail
Grady Ward; 3449 Martha Ct.; Arcata, CA 95521; 707-826-7715 (phone/fax)

Moby Words II
English words and phrases in plain ASCII text
Macintosh 512K or larger.
$149 retail
Grady Ward; 3449 Martha Ct.; Arcata, CA 95521; 707-826-7715 (phone/fax)

MPW C++ 3.2
Development environment
Macintosh Plus or larger (68020-, 68030- or 68040-based Mac recommended); 4 MB of RAM (8 MB recommended); hard disk drive; System 7 or later; MPW Development Environment 3.2 or later; MPW C 3.2.4 or later.

Text editor, cross-assembler and communications/ terminal emulator
Macintosh Plus or larger; 2 MB of RAM; hard disk drive.
$295 retail
Onset Computer Corp.; PO Box 3450; 536 MacArthur Blvd.; Pocasset, MA 02559; 508-563-9000 or 508-563-9477 (fax)

MPW Assembler V3.2.3
Assembler
Macintosh with 68020 processor or larger; 4 MB of free RAM (8 MB recommended); hard disk drive; System 7 or later; MPW Development Environment 3.2.3.
$150 retail
APDA — Apple Computer, Inc.; PO Box 319; Buffalo, NY 14207; 716-871-6555, 800-282-2732 or 716-871-6511 (fax)

TMON Professional
Interactive, multiwindow monitor/debugger
Macintosh Plus or larger; System 6.0.4.
$249.95 retail
Icom Simulations, Inc.; 648 S. Wheeling Rd.; Wheeling, IL 60090; 708-520-4440 or 708-459-7456 (fax)

µASM
Integrated cross macro assembler, text editor and communications program
Macintosh Plus or larger; System 6.0 or later.
$199.95 retail
$39.95 to $74.95 retail; upgrades to registered users
Micro Dialects, Inc.; PO Box 190; Loveland, OH 45140; 513-271-9100 or 513-271-4922 (fax)

Programming Tools/Basic

3-D Graphics Library
Three-dimensional graphics routines
Macintosh Plus or larger; True Basic Language System.
$79.95 retail
True BASIC, Inc.; 12 Commerce Ave.; West Lebanon, NH 03784; 800-436-2111

Advanced String Library
String handling routines
Macintosh Plus or larger; True Basic Language System.
$79.95 retail
True BASIC, Inc.; 12 Commerce Ave.; West Lebanon, NH 03784; 800-436-2111

■ **CTB Interfaces For FutureBasic**
Gives developers easier access to the CTB
Any Macintosh; FutureBasic 1.0.2 or later.
CTB Interfaces for FutureBasic interfaces files and sample code that allow FutureBasic programmers to access the Communications Toolbox (CTB). This includes the Connection Manager, Terminal Manager and File Transfer Manager. The software is targeted at FutureBasic developers who wish to have easier access to the CTB.
$19.95 retail
Software Design; PO Box 65352; West Des Moines, IA 50265; 515-279-9650 (phone/fax)

Developer's Toolkit
Allows developers to access the computer's hardware, ROM, System software and Toolbox commands
Macintosh Plus or larger; True Basic Language System.
$79.95 retail
True BASIC, Inc.; 12 Commerce Ave.; West Lebanon, NH 03784; 800-436-2111

FutureBasic
Basic language compiler
Macintosh Plus or larger; 1 MB of free RAM; hard disk drive.
$299.95 retail
Zedcor, Inc.; 4500 E. Speedway, Ste. 22; Tucson, AZ 85712; 602-881-8101, 800-482-4567 or 602-881-1841 (fax)

Microsoft QuickBasic 1.0
Basic development environment
Macintosh Plus or larger; 800K double-sided disk drive; hard disk drive or two 800K double-sided disk drives recommended.
$99 retail
Microsoft Corp.; One Microsoft Way; Redmond, WA 98052-6399; 206-882-8080

Sorting & Searching Library
Subroutines for sorting arrays in a True Basic program
Macintosh Plus or larger; True Basic Language System.
$79.95 retail
True BASIC, Inc.; 12 Commerce Ave.; West Lebanon, NH 03784; 800-436-2111

True Basic 2.61, Language & Runtime Standard Edition
Structured Basic programming language
Macintosh Plus or larger.
$19.95 retail; True Basic Student Edition
$99.95 retail; True Basic Standard Edition
$79.95 each retail; supplemental tool kits
True BASIC, Inc.; 12 Commerce Ave.; West Lebanon, NH 03784; 800-436-2111

True Basic 4.03, Language & Runtime Professional Version
Structured Basic programming language
Macintosh Plus or larger; System 6.0.4 or later.
$495 retail
True BASIC, Inc.; 12 Commerce Ave.; West Lebanon, NH 03784; 800-436-2111

VIP-Basic
Visual interactive programming in Basic
Macintosh Plus or larger; System 6.0 or later.
$295 retail
Mainstay; 591-A Constitution Ave.; Camarillo, CA 93012; 805-484-9400 or 805-484-9428 (fax)

Programming Tools/C

Absoft C/C++ Development Tool Kit For Macintosh PowerPC
Includes everything needed to edit, compile, link and debug native Macintosh PowerPC applications
Macintosh PowerPC.
$399 retail
Absoft Corp.; 2781 Bond St.; Rochester Hills, MI 48309; 810-853-0050 or 810-853-0108 (fax)

C Programmer's Toolbox/MPW
Tools that enhance programmer productivity
Any Macintosh; MPW 3.0 or later.
$295 retail
MMC AD Systems; PO Box 360845; Milpitas, CA 95036; 510-770-0858 or 510-770-0116 (fax)

c-tree Plus
Provides portable B+ tree functions for multikey ISAM file management in C
Macintosh Plus or larger; 5 MB of hard disk space; C compiler.
$595 U.S. retail
FairCom Corp.; 4006 W. Broadway; Columbia, MO 65203; 314-445-6833, 800-234-8180 or 314-445-9698 (fax)

CAD/CAM Developer's Kit
Libraries of C functions that give users the tools needed to create CAD features in their programs
Macintosh Plus or larger.
Call for pricing
Building Block Software, Inc.; 77 Pearson Rd.; Somerville, MA 02144; 617-628-5217 or 617-628-6333 (fax)

Candela ColorCircuit Transform Library (CCTL)
Color implementation tools
Macintosh II or Quadra family.
$750 retail
Candela, Ltd.; 1676 E. Cliff Rd.; Burnsville, MN 55337; 612-894-8890 or 612-894-8840 (fax)

CMaster 2.0
Think C enhancement
Macintosh Plus or larger; Think C 5/6/7 or Symantec C++ for Macintosh; System 7.0.
$129.95 direct
Jersey Scientific; 291 Springfield Ave., Ste. 201; Berkeley Heights, NJ 07922; 212-736-0406 or 908-464-3458 (fax)

Codecheck V5.0
Analyzes C and C++ source code for portability, maintainability and style
Macintosh Plus or larger; 1 MB of RAM; MPW.
$495 retail; professional version
Abraxas Software, Inc.; 5530 SW Kelly Ave.; Portland, OR 97201; 503-244-5253 or 503-244-8375 (fax)

D-C++
Optimizing C++ compiler
Macintosh II.
$2,200 to $4,850 retail
Diab Data, Inc.; 323 Vintage Park Dr.; Foster City, CA 94404; 415-571-1700 or 415-571-9068 (fax)

D-CC
Optimizing C compiler
Macintosh II.
$1,300 to $4,400 retail
Diab Data, Inc.; 323 Vintage Park Dr.; Foster City, CA 94404; 415-571-1700 or 415-571-9068 (fax)

MacDSP32CC-MPW
C compiler for the floating point processor on the MacDSP processor cards
Macintosh SE/30 or II family; 1 MB of RAM.
$1,500 retail
Spectral Innovations, Inc.; 1885 Lundy Ave., Ste. 208; San Jose, CA 95131; 408-955-0366 or 408-955-0370 (fax)

McCLint
C source-code semantic checking system (lint)
Macintosh with 1 MB of RAM; hard disk drive; System 5.2 or later.
$149.95 retail
MMC AD Systems; PO Box 360845; Milpitas, CA 95036; 510-770-0858 or 510-770-0116 (fax)

McCPrint
C/C++ source code beautifier/reformatter (pretty printer)
Any Macintosh.
$99.95 retail
MMC AD Systems; PO Box 360845; Milpitas, CA 95036; 510-770-0858 or 510-770-0116 (fax)

MPW C 3.2.4
Development environment
Macintosh with 68020 processor or larger; 4 MB of free RAM (8 MB recommended); hard disk drive; System 7 or later; MPW Development Environment 3.2.3.
$150 retail
APDA — Apple Computer, Inc.; PO Box 319; Buffalo, NY 14207; 716-871-6555, 800-282-2732 or 716-871-6511 (fax)

Object Master For Think C And C++
Integrated programming environment for Think C and C++
Macintosh Plus or larger; 2 MB of RAM; hard disk drive with 2 MB of free space; System 6.0.5 or later.

■ ICONIX * INDUSTRIAL-STRENGTH * MULTI-USER *OBJECT-ORIENTED CASE TOOLS
* See listing under Programming Tools/CASE, or call (310) 458-0092.

$255 retail
ACI US Inc.; 20883 Stevens Creek Blvd.; Cupertino, CA 95014; 408-252-4444, 800-384-0010 or 408-252-0831 (fax)

PlaySound.lib
Digitized sound library
Macintosh Plus or larger; 800K floppy disk drive; System 6.0.3 or later; Think C 5.0 or later.
$39 retail
Hologlyph, Inc.; PO Box 1305; Arvada, CO 80001; 303-422-9082, 800-283-9082 or 303-422-4366 (fax)

r-tree Report Generator
Report generator for applications using c-tree Plus
Macintosh Plus or larger; 2 MB of hard disk space; C compiler; c-tree Plus.
$295 U.S. retail
FairCom Corp.; 4006 W. Broadway; Columbia, MO 65203; 314-445-6833, 800-234-8180 or 314-445-9698 (fax)

StoneTable And StoneTableExtra
Library that replaces all functions found in List Manager
Macintosh Plus or larger; System 6.0 or later.
$150 retail; StoneTable
$200 retail; any two compilers
$250 retail; any three compilers
$300 retail; all four compilers
$50 retail; StoneTableExtra
$75 retail; any two compilers
$100 retail; any three compilers
$150 retail; all four compilers
StoneTablet Publishing; PO Box 12665; Portland, OR 97212; 503-287-3424

Think C V5.0
Professional C development environment
Macintosh Plus or larger; 1 MB of RAM (2 MB recommended); Debugger requires 2 MB and MultiFinder; System 6.0 or later.
$299 retail
Symantec Corp.; 10201 Torre Ave.; Cupertino, CA 95014; 800-441-7234 or 800-626-8847 in CA

Tools Plus
User interface and event handling libraries for Think C/C++ and Think Pascal
Macintosh Plus or larger; System 5.0 or later (compatible with System 5,6, and 7).
$149 retail; C or Pascal
$199 retail; both
Water's Edge Software; PO Box 70022; 2441 Lakeshore Rd. W; Oakville, Ontario, Canada L6L 6M9; 416-219-5628

Transputer C Compiler And Assembler
C compiler
Macintosh II, Centris, Performa or Quadra; Pacific Parallel Pac8 or Pac2.
$595 retail
Pacific Parallel Research, Inc.; 922 Grange Hall Rd.; Cardiff by the Sea, CA 92007; 619-436-1455 (phone/fax)

VIP-C
Integrated ANSI C programming environment
Macintosh Plus or larger; 4 MB of RAM; System 6.0 or later.
$495 retail
Mainstay; 591-A Constitution Ave.; Camarillo, CA 93012; 805-484-9400 or 805-484-9428 (fax)

Programming Tools/Cobol

Acucobol-85 2.0
Cobol compiler
Macintosh SE/30 or II family with PMMU; 4 MB of RAM; hard disk drive; A/UX 2.0.
Call for pricing
Acucobol, Inc.; 7950 Silverton Ave., Ste. 201; San Diego, CA 92126; 619-689-7220, 800-262-6585 or 619-566-3071 (fax)

AcuView
Integrated graphics package for Cobol
Macintosh SE/30 or II family with PMMU; 4 MB of RAM; hard disk drive; A/UX 2.0; Acucobol-85.
Call for pricing
Acucobol, Inc.; 7950 Silverton Ave., Ste. 201; San Diego, CA 92126; 619-689-7220, 800-262-6585 or 619-566-3071 (fax)

Programming Tools/Computer-Aided Software Engineering (CASE)

5PM Pro
GUI development environment
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later.
5PM Pro is a powerful GUI development environment allowing users to create graphical front ends for terminal emulation-based host applications, as well as SQL-based client/server applications. 5PM Pro offers 5Talk, ASC's proprietary HyperTalk-like scripting language with full support for HyperCard XCMDs and XFCNs. The end user is given the ability to create palettes with graphical objects (i.e., buttons, icons, radio buttons, etc.). 5PM Pro allows users to integrate Legacy systems and client/server applications into one GUI desktop metaphor. 5PM Pro allows users to create a GUI interface that can be executed by ASC's 5PM Term terminal emulation product, which ships in different emulation modes, including: IBM-3270, IBM-3270TN, IBM-5250, IBM-5250TN, DEC-VT420, as well as Unisys, Bull and Honeywell connectivity.
$3,895 retail
ASC; 10601 S. De Anza Blvd., Ste. 105; Cupertino, CA 95014; 408-725-4242 or 408-725-4243 (fax)
FAX©NDEMAND 1-800-872-3293 **140 & 141**

Aide-de-Camp
Configuration management system
Macintosh II; A/UX.
Call for pricing
Software Maintenance and Development Systems, Inc.; 200 Baker Ave.; Concord, MA 01742; 508-369-7398 or 508-369-8272 (fax)

AppMaker 1.5
Speeds development of Macintosh applications
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.
$299 retail
Bowers Development Corp.; 97 Lowell Rd.; Concord, MA 01742; 508-369-8175 or 508-369-8224 (fax)

ArchiText
Language-driven document constructor
Macintosh II; 8 MB of RAM; 50 MB hard disk drive; A/UX.
$495 retail
Interactive Software Engineering, Inc.; 270 Storke Rd., Ste. 7; Goleta, CA 93117; 805-685-1006 or 805-685-6869 (fax)

Aspect 2.0
Cross-platform GUI development system
Macintosh Plus or larger; System 6.0 or later.
$1,495 retail
Open Inc.; 660 Southpointe Ct., Ste. 200; Colorado Springs, CO 80906; 719-527-9700 or 719-576-3835 (fax)

Aut2
CASE tool
Macintosh Plus or larger; 1 MB of RAM (2 MB recommended); hard disk drive; laser printer.
$5,000 retail; discounts and site licenses available
Model Systems Consultants, Inc.; 721 Park Ave.; Bainbridge Island, WA 98110; 206-842-1158

■ **C/S Elements**
Object-oriented, cross-platform development tool
Macintosh Plus or larger; System 6.0.4 or later.
A superset of Open Interface Elements, C/S Elements is an object-oriented, cross-platform development tool composed of GUI development and extensible script language facilities. It provides transparent access to any flat-file or relational database, enabling developers to mix and match data from Oracle, Sybase, Informix and ODBC-compliant databases. C/S Elements allows building enterprise-wide client/server applications that are portable on more than 40 platforms. Features include: data source-independent, extensible API; full support for ANSI SQL; point-and-click data viewing facility; Data Link Editor; and internationalization (substitution of specific resource files into French, German, Italian, Spanish, Kanji/Japanese and Hangul/Korean.
$7,000 retail; no run-time fees
Neuron Data, Inc.; 156 University Ave.; Palo Alto, CA 94301; 415-321-4488, 800-876-4900 or 415-321-3728 (fax)

CASE Essence
Explains the principles of Information Engineering
Macintosh Classic or larger; 3.5 MB of hard disk space; System 6.0.7 or later.
$4,945 retail; volume discounts available
AGPW, Inc.; PO Box 11784; St. Louis, MO 63105; 314-721-4884, 800-795-7953 or 314-721-2479 (fax)

■ **DeeMaker Tool Suite 1.4**
Premiere human interface development tool that provides a cost-effective way to quickly create screens of any complexity
Macintosh Plus or larger, including Power Macintosh; System 6.0 or later.
DeeMaker is a GUI Development Tool that covers both the design and implementation aspects of GUI software development. A short learning curve and advanced software engineering model transform GUI development into an effortless and straightforward activity. Users can design all windows types with state-of-the-art look and feel. All aspects of the tool are reusable. It works in any environment and is bundled with DeeAPP, example application frame work, in C++.
$199 retail; educational
$399 retail; individual
$899 retail; corporation site distribution
$1,399 retail; commercial distribution
nDimensions Software House; 7000 Soquel Dr., Ste. 403; Aptos, CA 95003; 408-662-1037

Deft Designer
CASE tool for building requirement specifications, analyzing user needs and producing general and detailed information system designs
Macintosh with 2.5 MB of RAM; hard disk drive with 3 MB of free space; System 6.0.3 or later.
Call for pricing
Sybase, Inc.; 6475 Christie Ave.; Emeryville, CA 94608; 800-879-2273 or 510-658-9441 (fax)

Deft Professional
CASE tool for managing systems throughout the software life cycle
Macintosh with 2.5 MB of RAM; hard disk drive with 3 MB of free space; System 6.0.3 or later.
Call for pricing
Sybase, Inc.; 6475 Christie Ave.; Emeryville, CA 94608; 800-879-2273 or 510-658-9441 (fax)

Design/IDEF
Graphics-based automation tool that supports IDEF process, data and behavioral modeling uses in business process redesign, CIM, telecommunications, CASE and enterprise modeling
Macintosh Plus or larger; 2 MB of RAM; ImageWriter or LaserWriter.
$3,995 retail
Meta Software Corp.; 125 CambridgePark Dr.; Cambridge, MA 02140; 617-576-6920, 800-227-4106 or 617-661-2008 (fax)

Foundation Translator
Gateway between Foundation Vista and the Tandem environment
Macintosh Plus or larger; 1 MB of RAM; Tandem computer.
Call for pricing
Menlo Business Systems, Inc.; 201 Main St.; Los Altos, CA 94022; 415-948-7920 or 415-949-6655 (fax)

ICONIX
* INDUSTRIAL-STRENGTH * MULTI-USER *OBJECT-ORIENTED CASE TOOLS
* See listing under Programming Tools/CASE, or call (310) 458-0092.

Foundation Vista
SQL-oriented CASE tool; automates structured design methodologies
Macintosh Plus or larger; 1 MB of RAM.
Call for pricing
Menlo Business Systems, Inc.; 201 Main St.; Los Altos, CA 94022; 415-948-7920 or 415-949-6655 (fax)

■ **ICONIX Object-Oriented Starter Kit**
Introduces developers to the world of Objects
Macintosh II or larger; CD-ROM drive.
The ICONIX O-O Starter Kit provides developers with a low-cost, low-risk way of getting their "feet wet" in the world of Objects. The kit provides everything developers need to get started in Object-Oriented software engineering, providing exposure to multiple methodologies so developers can pick the ones that are right for them. It includes: ICONIX's state-of-the-art training tool, a CD-ROM entitled "Overview of O-O Analysis and Design Methods," the industrial-strength object-oriented analysis and design capabilities of ObjectModeler and FastTask and one-year maintenance.
$3,495 retail
ICONIX Software Engineering, Inc.; 2800 28th St., Ste. 320; Santa Monica, CA 90405; 310-458-0092 or 310-396-3454 (fax)

ICONIX PowerTools
Software productivity improvement
Macintosh II or larger; Unix.
ICONIX PowerTools is an integrated industrial strength CASE tool set designed to span the software life cycle. It consists of 10 software packages: ObjectModeler, FreeFlow, FastTask, DataModeler, AdaFlow, QuickChart, SmartChart, PowerPDL, ASCII Bridge and CoCoPro, which can operate independently or as part of the fully integrated PowerTools CASE suite. All modules are network/multiuser compatible.
ObjectModeler supports object-oriented requirements analysis (OOA), object-oriented design (OOD) and object-oriented programming (OOP). Leveled diagram editors support the notations of Rumbaugh, Coad/Yourdon, Booch and Jacobsen for OOA and OOD; language-sensitive editors support OOP in C++, Program Design Language (PDL) and other languages. All are fully integrated with the multiuser, multimethod PowerTools dictionary that is provided.
FreeFlow supports structured, real-time and several object-oriented analysis techniques with DeMarco-style leveled sets of data flow diagrams, minispecs, PowerTools dictionary, Integrated Requirements Traceability (IRT), various rules checks and extensive reporting.
FastTask provides support for Jacobsen Interaction Diagrams, as well as for real-time (Ward/Mellor or Hatley) and object-oriented development by mapping time dependent behavior with leveled sets of state transition diagrams that can be transformed instantly to a variety of matrix/tabular equivalents. Graphical and language-sensitive editors are fully integrated with the PowerTools dictionary.
DataModeler supports logical and physical database design and the object-oriented methods of Shlaer/Mellor and Smith/Tockey. It allows a user to create entity-relationship diagrams in the notations of Chen, Martin and IDEF1X. These graphical editors are integrated with the PowerTools dictionary and language-sensitive editors for Cobol, SQL, etc.
QuickChart supports the Yourdon/Constantine method of structured design using a graphical editor for structure charts, PowerTools dictionary and language sensitive editors. Structure charts show the partitioning of software into modules, the hierarchy and organization of those modules and the communication interfaces between them.
SmartChart integrates design and coding by combining language-sensitive editing with automatic structure chart generation. At this stage, an engineer refines pseudocode and generates structure charts from the information produced by the PDL processor. Source code is also created by selecting templates for several languages.
PowerPDL generates formatted documentation from a PDL file. Listings include table of contents, design body, data cross-reference list, subprogram cross-reference list and subprogram nesting tree.
ASCII Bridge supports import and export of PowerTools files to and from the Mac environment. The tool supports the CASE Data Interchange Format (CDIF) standard for data interchange with tools of other vendors.
AdaFlow combines Buhr/Booch diagram editing with dictionary and Ada language-sensitive editing. AdaFlow uses the PowerTools dictionary produced in requirements analysis, so all analysis objects and their definitions are readily available during design. Ada code can be added by "exploding" a graphic object from a diagram into a code window and using the Ada language-sensitive editor.
CoCoPro implements the Constructive Cost Model (CoCoMo) technique for estimating costs of software projects and allows automatic calibration of the model to a cost history database.
$1,495 each retail
$5,995 to $7,995 retail; for PowerTools bundled sets (PowerPacks)
ICONIX Software Engineering, Inc.; 2800 28th St., Ste. 320; Santa Monica, CA 90405; 310-458-0092 or 310-396-3454 (fax)

ISE Eiffel 3
Object-oriented software development environment and toolset
Macintosh II; 8 MB of RAM; A/UX (MacOS in 3rd quarter of 1994).
$995 to $1,995 retail
Interactive Software Engineering, Inc.; 270 Storke Rd., Ste. 7; Goleta, CA 93117; 805-685-1006 or 805-685-6869 (fax)

MacAnalyst 4.2
CASE tool for system analysis and software design
Macintosh with 6 MB of RAM; external disk drive or hard disk drive.
$995 retail; MacAnalyst 4.1 (includes DFD, ERD, OOA and prototyping options)
$1,595 retail; MacAnalyst/Expert 4.1 (includes MacAnalyst options, plus real-time and requirements database)
Excel Software; PO Box 1414; Marshalltown, IA 50158; 515-752-5359 or 515-752-2435 (fax)

MacDesigner 4.2
Tool for structured design, object-oriented design and multitask design; requirement database, data dictionary
Macintosh with 6 MB of RAM; external disk drive or hard disk drive.
$995 retail; MacDesigner 4.1 (includes structured and object-oriented design)
$1,595 retail; MacDesigner/Expert 4.1 (includes MacDesigner, plus task diagrams and requirements database)
Excel Software; PO Box 1414; Marshalltown, IA 50158; 515-752-5359 or 515-752-2435 (fax)

MacStile
System design and schematic diagramming tool
Macintosh Plus or larger; 1 MB of RAM; hard disk drive recommended; System 4.2 or later.
$199 retail
Software Originals, Inc.; 7015 Perry Pl.; Worthington, OH 43085; 419-885-8747, 800-873-6873 or 419-885-7354 (fax)

■ **MacSys Error Logger**
Provides a central depository for logging, monitoring and archiving error reports during the project development cycle
Macintosh SE or larger; 4 MB of RAM; 40 MB hard disk drive.
The MacSys Error Logger is a client-server tool that provides a central depository for logging, monitoring and archiving error reports during the various phases of a project development cycle. Error Logger will track multiple projects and sub-projects simultaneously and provide reporting based on any project criteria. Unlike larger, unmanageable CASE tools, the MacSys Error Logger is easy to use, effective and inexpensive for project managers who are managing multideveloper software projects.
$129 retail; without runtime
MacSys Inc.; 362 Terry Fox Dr., Ste. 200; Kanata, Ontario, Canada K2K 2P5; 613-591-9200 or 613-591-8089 (fax)

MetaDesign
Powerful, smart diagramming tool for designing complex system models
Macintosh Plus or larger; 1 MB of RAM; ImageWriter or LaserWriter.
$199 retail
Meta Software Corp.; 125 CambridgePark Dr.; Cambridge, MA 02140; 617-576-6920, 800-227-4106 or 617-661-2008 (fax)

Neuron Open Interface Elements
Object-oriented, extensible development tool
Macintosh SE or II.
$5,000 retail
Neuron Data, Inc.; 156 University Ave.; Palo Alto, CA 94301; 415-321-4488, 800-876-4900 or 415-321-3728 (fax)

QASE RT
CASE tool
Macintosh Classic or larger; 2 MB of RAM; hard disk drive; 13-inch or larger monitor recommended.
$14,500 retail
Advanced System Technologies, Inc.; 12200 E. Briarwood Ave., Ste. 260; Englewood, CO 80112; 303-790-4242, ext. 124 or 303-790-2816 (fax)

Silverrun-DFD 2.2
CASE tool for designing data flow diagrams
Macintosh II; 4 MB of RAM.
$2,500 retail; multiple copy discounts are available
Computer Systems Advisers, Inc.; 50 Tice Blvd.; Woodcliff Lake, NJ 07675; 201-391-6500, 800-537-4262 or 201-391-2210 (fax)

Silverrun-ERX 2.1.1
Rule-based CASE tool for designing entity-relation data models
Macintosh II; 4 MB of RAM.
$2,500 retail; multiple copy discounts are available
Computer Systems Advisers, Inc.; 50 Tice Blvd.; Woodcliff Lake, NJ 07675; 201-391-6500, 800-537-4262 or 201-391-2210 (fax)

Silverrun-RDM 2.3
Helps database administrators produce relational data models
Macintosh II; 4 MB of RAM.
$3,000 retail; multiple copy discounts are available
Computer Systems Advisers, Inc.; 50 Tice Blvd.; Woodcliff Lake, NJ 07675; 201-391-6500, 800-537-4262 or 201-391-2210 (fax)

Silverrun-WRM 2.1.1
CASE tool for work group environment
Macintosh II; 4 MB of RAM.
$2,500 retail; multiple copy discounts are available
Computer Systems Advisers, Inc.; 50 Tice Blvd.; Woodcliff Lake, NJ 07675; 201-391-6500, 800-537-4262 or 201-391-2210 (fax)

■ **Smart Elements**
Cross-platform application development environment
Macintosh Plus or larger; System 6.0.7 or later.
Smart Elements is a cross-platform application development environment that combines object-oriented structures and business rules capability of Nexpert Object with the GUI design and script facilities of Open Interface Elements. Smart Element's object modules and message-passing capabilities enable developers to build modular, encapsulated code for better reusability. Its rules capability helps to efficiently represent complex logic and business rules. Smart Elements offers direct access to any database or source. The GUI design module allows users to build graphical font ends to rule-based applications that are portable on more than 40 platforms. The extensible script allows linking interface objects to application logic without programming and provides dynamic compilation for superior performance over interpreted languages. As a result, it delivers 3GL-level performance combined with 4GL-level productivity benefits.
$9,850 starting price retail; no run-time fees
Neuron Data, Inc.; 156 University Ave.; Palo Alto, CA 94301; 415-321-4488, 800-876-4900 or 415-321-3728 (fax)

FairCom Apple A/UX SQL Server
Server
Macintosh with 5 MB of RAM; 5 MB of free hard disk space; C compiler.
$445 to $3795 retail; depends on number of users
FairCom Corp.; 4006 W. Broadway; Columbia, MO 65203; 314-445-6833, 800-234-8180 or 314-445-9698 (fax)

FairCom System 7 Server
Server
Macintosh with 4 MB of RAM; 5 MB of free hard disk space; C compiler.
$295 to 2,495 retail; depends on number of users
FairCom Corp.; 4006 W. Broadway; Columbia, MO 65203; 314-445-6833, 800-234-8180 or 314-445-9698 (fax)

■ **FileFlex**
Relational database engine
Macintosh Plus or larger; 1 MB of RAM; System 7.0 or later.
FileFlex provides users with the ability to embed a complete relational database engine within projects. FileFlex works with Macromedia Director, Authorware Professional, HyperCard, SuperCard, MicroPhone, Frontier — any XCMD-compatible environment. FileFlex is fully XBase compatible. FileFlex and FoxPro can directly exchange files without conversion. FileFlex requires only 100K of RAM — allowing developers to add relational database capabilities to projects at virtually no cost in system resources. FileFlex ships with an Online Guide in addition to two printed manuals. The guide contains detailed information on using FileFlex with FoxPro, Director, Authorware and other tools. The guide is fully searchable and printable.
$195 retail
Component Software; PO Box 201; Rocky Hill, NJ 08553; 609-497-4501, 800-633-4253 or 609-497-4008 (fax)

■ **FileStatz For FileMaker Pro**
Analyzes and reviews databases
Macintosh SE or larger; 8 MB of RAM; System 7.0 or later; hard disk drive.
FileStatz is a stand-alone utility that lets users document any FileMaker Pro database automatically. FileStatz assists consultants, developers and analysts in getting a more complete and indepth look at any database file that is included in the FileMaker Pro application through detailed printouts. It lists all of the calculations that a field is used in, including other calculation fields. It lists which fields are in each layout and shows all scripts in a file, in the order they appear on the menu, instead of in their "Creation" order. FileStatz lets users analyze database structures before they begin modifications or enhancements. Users may view all fields, scripts or view one layout at a time. Users may sort field names by creation order, field name or descending field name before printing. Users can print a "Quik" field list, script list, layout list or print or export a "Full Report" detailing fields, layouts, calculations and more. FileStatz also includes AppleScript 1.1.
$39 retail
Working Solutionz Software; 2191 Rosecrans St.; Simi Valley, CA 93065; 805-522-2170 or 805-527-7787 (fax)

FlexWare Development System
4th generation database language to create high-end multiuser applications
Macintosh Plus or larger; 4 MB of RAM (6 MB for System 7); hard disk drive with 47 MB or more of free space; multiuser requires AppleTalk or EtherTalk and networking software, such a AppleShare or FlexShare (client server); FlexShare and/or AppleShare require dedicated Macintosh.
$3,750 retail
Manzanita Software; 2130 Professional Dr., Ste. 150; Roseville, CA 95661; 916-781-3880, 800-447-5700 or 916-781-3814 (fax)

HOPS (Heuristic Optimized Processing System)
Speeds up indexing, sorting and algebra operations in relational databases
Macintosh with 5 MB of RAM; appropriate storage.
Price varies upon complexity of task and assistance required
HOPS International, Inc.; 800 West Ave.; Miami Beach, FL 33139; 305-672-2361 or 305-538-8044 (fax)

HyBase V3.0
Database programming environment
Macintosh SE or larger; 2 MB of RAM.
$450 retail; single user
$2,000 and up retail; network version
Answer Software Corp.; 20045 Stevens Creek Blvd.; Cupertino, CA 95014; 408-253-7515 or 408-253-8430 (fax)

IDB Introductory Package
Provides an in-depth introduction to the IDB Object Database
Macintosh Plus or larger; 2 MB of RAM; System 7.0 or later.
$99 retail
Persistent Data Systems, Inc.; PO Box 38415; Pittsburgh, PA 15238; 412-963-1843 or 412-963-1846 (fax)

IDB Object Database
High-performance distributed object database
Macintosh Plus or larger; 4 MB of RAM; Think C 6.0 or later or MPW 3.2; System 7.0 or later.
$995 retail
Persistent Data Systems, Inc.; PO Box 38415; Pittsburgh, PA 15238; 412-963-1843 or 412-963-1846 (fax)

ImageTracker Externals For 4th Dimension
Image and document cataloguing system for managing graphics files with 4th Dimension
Macintosh Plus or larger; System 7.0 or later.
$199 retail; single-user license
Edo Communications, Inc.; 168 Neponset St., Ste. 3; Canton, MA 02021; 617-821-6324

ImageTracker Pro For 4th Dimension
Image and document cataloging system for developing visual databases, managing graphics files, QuickTime movies and Photo CDs with 4th Dimension
Macintosh Plus or larger; System 7.0 or later; QuickTime 1.0 or later.
$295 retail; single-user license
$100 per station retail; multiuser
Edo Communications, Inc.; 168 Neponset St., Ste. 3; Canton, MA 02021; 617-821-6324

■ **Informix-ESQL/C**
Allows developers to access highly-efficient SQL database capabilities
Any Macintosh; Unix operating system.
Informix-embedded SQL (ESQL) allows users to access highly-efficient SQL database capabilities, including high-level data definition and manipulation commands and SQL query optimization facilities. Informix-ESQL conforms to the ANSI SQL standard, so users don't have to learn different data access methods when accessing data from Informix database servers, as well as other database servers, such as IBM's DB2 and OS/400.
$300 retail; per user

ICONIX
* INDUSTRIAL-STRENGTH * MULTI-USER *OBJECT-ORIENTED CASE TOOLS

Inside Out II
Multiuser relational database engine for programmers of conventional Pascal or C development systems
Macintosh Plus or larger; 1 MB of RAM; hard disk drive recommended; System 6.0.2 or later.
$595 retail; single user
$795 retail; multiuser
Sierra Software Innovations; 923 Tahoe Blvd., Ste. 102; Incline Village, NV 89451; 702-832-0300, 800-621-0631 or 702-832-7753 (fax)

■ **M.A.T.I.S.S.E.**
Database management system
Macintosh with 68020 processor or larger; 8 MB of RAM; MPW Shell 3.3.1, MPW C Compiler 3.3.1, MacTCP 1.1.1 or later; System 7.1 or later.
M.A.T.I.S.S.E. is a new generation database management system that combines advanced object-oriented modeling capabilities with a mission critical transaction technology. It is designed to meet the needs of complex database applications that require any or all of the following: large volumes of complex, inter-related, multityped information, fault tolerance, ensured data consistency and integrity, high-speed OLTP access, high throughput and optimal performance, historical object management and intelligent modeling of constraints. M.A.T.I.S.S.E. complies with the traditional paradigm, where the database management system is the foundation of the information system, providing common and concurrent data storage and retrieval capabilities to multiple applications. M.A.T.I.S.S.E. supports heterogeneous client-server architectures. All its functionalities can be used regardless of the development environment used to build the applications, whether it is object oriented or not.

$249.95 retail
Tuesday Software; 215 Via Sevilla; Santa Barbara, CA 93109; 805-962-7889, 800-945-7889 (orders) or 805-564-8955 (fax)

WandTools
4th Dimension external package
Macintosh Plus or larger; 4th Dimension 2.1.1; System 6.0.5; Videx TimeWand II.
$299 retail
E.E.S. Companies, Inc.; 2 Vernon St., Ste. 404; Framingham, MA 01701; 508-653-6911 or 508-650-1872 (fax)

■ **X4**
Extension manager
Macintosh Plus or larger; 2 MB of RAM; 4th Dimension 2.2.1 or later.
X4 is a module for 4th Dimension that allows extension developers to transfer modified external code and/or resources into a 4th Dimension database with a single button click — without having to exit 4D. X4 supports 4DEX, 4DPX, DEV4 and REDX extensions. X4 allows users to browse external resources like 4BND, 4BNX, 4DTE, 4Dte, STR#, STR, VAR# and PICT. Process hooks to common development systems and resource editors are provided. Users can easily move from X4 into an external project with a button click.

Bak'N Forth
Forth language learning system
Macintosh Plus or larger.
$70 retail
Navaco; 420 Pasadena Dr.; Erie, PA 16505; 814-833-2592 (phone/fax)

MacForth Plus 4.2
Multitasking programming environment with integrated text editor, XCMD support
Macintosh 512K or larger.
MacForth Plus is an interactive, multitasking programming environment. Features include: assembler; text editor; toolbox support; turnkey compiler or creating stand-alone applications; multitasker; floating-point; and an extensive 500-page user manual. Also included in the package are Mac II Tools, which provides color graphics, a 68020 assembler and 68881/68882 coprocessor support; and Online Glossary Tool, which gives programmers the capability to see the definition of any MacForth word online. The program combines all of the features of the previous levels of MacForth with many added capabilities. Upgrades are available from the older versions, as well as from the student version.

Integrated Fortran 77 development system
Macintosh 512KE or larger.
$329 retail
DCM Data Products; 1200 Quail St., Ste. 280; Newport Beach, CA 92660

Math77 V.4.1
Portable library of Fortran subroutines
Macintosh Plus or larger.
$249 retail
Language Systems Corp.; 100 Carpenter Dr.; Sterling, VA 20164; 800-252-6479 or 703-689-9593 (fax)

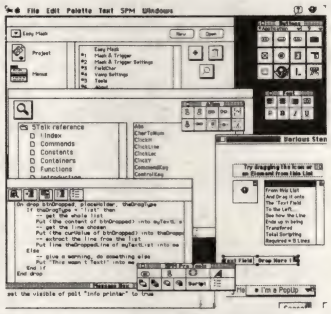
SuperPlot
Allows programmers to call an easy-to-use plotting routine directly from their application
Macintosh Plus or larger.
$195 retail
SuperSoft; 498 E. Robin Rd.; Orem, UT 84057; 801-225-4356 or 801-226-6276 (fax)

Transputer Fortran 77
Fortran compiler
Macintosh II, Centris, Performa or Quadra; Pacific Parallel Pac8 or Pac2.
$895 retail
Pacific Parallel Research, Inc.; 922 Grange Hall Rd.; Cardiff by the Sea, CA 92007; 619-436-1455 (phone/fax)

TSiGraphics
Gives users total control over the Fortran plotting environment
Macintosh Plus or larger; LS Fortran 3.0.1 or later.
$195 retail
Language Systems Corp.; 100 Carpenter Dr.; Sterling, VA 20164; 800-252-6479 or 703-689-9593 (fax)

Programming Tools/ HyperCard

5PM Pro
GUI development environment
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later.



5PM Pro is a powerful GUI development environment allowing users to create graphical front ends for terminal emulation-based host applications, as well as SQL-based client/server applications. 5PM Pro offers 5Talk, ASC's proprietary HyperTalk-like scripting language with full support for HyperCard XCMDs and XFCNs. The end user is given the ability to create palettes with graphical objects (i.e., buttons, icons, radio buttons, etc.). 5PM Pro allows users to integrate Legacy systems and client/server applications into one GUI desktop metaphor. 5PM Pro allows users to create a GUI interface that can be executed by ASC's 5PM Term terminal emulation product, which ships in different emulation modes, including: IBM-3270, IBM-3270TN, IBM-5250, IBM-5250TN, DEC-VT420, as well as Unisys, Bull and Honeywell connectivity.
$3,895 retail
ASC; 10601 S. De Anza Blvd., Ste. 105; Cupertino, CA 95014; 408-725-4242 or 408-725-4243 (fax)
FAX©NDEMAND 1-800-872-3293 **140 & 141**

Authenticate And Mutate
XFCN that allows users to do computer authentication of fields with one function call; XFCN used to format or transform field contents
Macintosh Plus or larger; HyperCard 1.0 or later; 4th Dimension 1.0.6 or 2.0.x; System 4.1 or later.
$125 retail
SoftStream International, Inc.; 106 State Rd.; N. Dartmouth, MA 02747; 508-991-4011, 800-262-6610 or 508-991-4223 (fax)

CLR HyperArrays V2.0
XCMDs and XFCNs for working efficiently with numeric arrays
Macintosh Plus or larger.
$100 retail
Clear Lake Research; 2476 Bolsover, Ste. 343; Houston, TX 77005; 713-242-3494

CompileIt! 2.6
HyperCard script compiler
Macintosh Plus or larger; HyperCard.
$149 retail
Heizer Software; PO Box 232019; Pleasant Hill, CA 94523; 510-943-7667, 800-888-7667 or 510-943-6882 (fax)

ConvertIt!
HyperCard to ToolBook converter
Macintosh Plus or larger; 2 MB of RAM recommended; HyperCard 2.0.2 or later; IBM PC or compatible; Windows 3.0; ToolBook 1.5.
$199 retail
Heizer Software; PO Box 232019; Pleasant Hill, CA 94523; 510-943-7667, 800-888-7667 or 510-943-6882 (fax)

epsiTalk
Real-time multiuser HyperCard with peer to peer messaging
Macintosh Plus or larger (68030 or larger recommended); 4 MB of RAM; hard disk drive; HyperCard 2.2 or later; AppleScript 1.1 or later; System 7.0 or later .
$99 retail; two-users
$239 retail; five-user

$59 retail; each additional user
epsi Computer Systems, Inc.; 11238 Kendale View; Delta, BC, Canada V4C 3P9; 604-589-4412 or 604-589-4104 (fax)

Hyper488
Software stack designed to simplify the interactive development of IEEE 488 control applications with IEEE 488 plug-in boards or external controllers for Macintosh computers
Any Macintosh; NB-GPIB, GPIB-SE, GPIB-SE/30, NB-DMA2800, GPIB-SCSI-A, GPIB-SCSI, GPIB-422CT, LC-GPIB.
No charge with purchase of GPIB interface kits for the Macintosh
National Instruments; 6504 Bridge Point Pkwy.; Austin, TX 78730; 512-794-0100, 800-433-3488 or 512-794-8411 (fax)

HyperBasic
XCMD generator using Basic
Macintosh Plus or larger; 1 MB of RAM; hard disk drive recommended; System 6.0.2 or later; HyperCard 1.2.1 or later.
$149 retail
Novy Systems, Inc.; 107 E. Palm Way, #14; Edgewater, FL 32132; 904-427-2358, 800-553-2038 or 904-428-0765 (fax)

HyperCard LabelTools II
Prints labels
Macintosh Plus or larger; HyperCard 2.0; CoStar LabelWriter II Plus or Avery Personal Label Printer; System 6.0.3 or later.
$79.95 retail
E.E.S. Companies, Inc.; 2 Vernon St., Ste. 404; Framingham, MA 01701; 508-653-6911 or 508-650-1872 (fax)

HyperChart
Interactive, fast and easy business graphics for HyperCard
Macintosh Plus or larger; HyperCard 2.0.
$150 retail
NewMedia Inc.; 3400 N. High St., Ste. 260; Columbus, OH 43202; 614-267-7888 or 614-267-7890 (fax)

HyperHit Deluxe 2.0
Data management tool
Macintosh with 1 MB of RAM; HyperCard 2.0, SuperCard 1.6 or HyperApp (any HyperCard external compatible product).
$395 starting price retail
SoftStream International, Inc.; 106 State Rd.; N. Dartmouth, MA 02747; 508-991-4011, 800-262-6610 or 508-991-4223 (fax)

ICONIX * INDUSTRIAL-STRENGTH * MULTI-USER *OBJECT-ORIENTED CASE TOOLS

Programming Tools/Modula

Numerical Procedures In Modula-2
Authorized Modula-2 translation of Numerical Recipes in Pascal
Macintosh Plus or larger.
$95 retail
PolyWare; 420 Rushton Rd.; Toronto, Ontario, Canada M6C 2Y3; 416-651-6683

■ **p1 Modula-2**
Object-oriented compiler
Any Macintosh; 4 MB of RAM.
p1 Modula-2 is a full implementation of the ISO Standard for Modula-2, which includes exception handling, termination, complex numbers, value constructors, a standard library and more. It supports objects and MacApp, foreign language calls, all current MPW interfaces, optimized 680X0 instructions, three floating point types with four modes of operation, etc. A symbolic window debugger, several utilities and a set of examples (including MacApp tutorial) are provided. p1 Modula-2 requires MPW or Metrowerks Code Warrior. It is targeted for professional development, and prompt technical support by E-mail or fax is granted. A Power Macintosh version is available.
$395 retail
p1 GmbH; HogenbergstraBe 20; W-8000 Munich, 21 Germany; +49 (89) 54-613-10 or +49 (89) 58-025-97 (fax)

Programming Tools/Pascal

Just Enough Pascal
Add-on learning tool for Think Pascal programming environment
Macintosh Plus or larger; 1 MB of RAM; Think Pascal; two 800K disk drives; hard disk drive strongly recommended.
$75 retail
Symantec Corp.; 10201 Torre Ave.; Cupertino, CA 95014; 800-441-7234 or 800-626-8847 in CA

MacWireFrame
Three-dimensional solid and wire-frame modeling program developing tool
Macintosh II; 2 MB of RAM; Think Pascal.
$299.95 retail
Amplified Intelligence; Dept. D; PO Box 189279; Sacramento, CA 95818; 916-737-1550, 916-454-9880 or 916-454-9350 (fax)

MPW Object Pascal 3.2.3
Development environment
Macintosh with 68020 processor or larger; 4 MB of free RAM (8 MB recommended); hard disk drive; System 7 or later; MPW Development Environment 3.2.3.
$150 retail
APDA—Apple Computer, Inc.; PO Box 319; Buffalo, NY 14207; 716-871-6555, 800-282-2732 or 716-871-6511 (fax)

OP2CPlus
Object Pascal to C++ translation
Macintosh Plus or larger; 8 MB of RAM.
$895 retail
Graphic Magic Inc.; 180 Seventh Ave., Ste. 201; Santa Cruz, CA 95062; 408-464-1949 or 408-464-0731 (fax)

p2c
Converts MPW Pascal to C++
Macintosh Plus or larger; MPW; System 6.0.2 or later.
$7,500 retail
Sierra Software Innovations; 923 Tahoe Blvd., Ste. 102; Incline Village, NV 89451; 702-832-0300, 800-621-0631 or 702-832-7753 (fax)

Think Pascal V4.0
Professional Pascal development environment
Macintosh Plus or larger; 1 MB of RAM (2 MB recommended); hard disk drive recommended; System 6 or later.
$249 retail
$69 retail; upgrade
Symantec Corp.; 10201 Torre Ave.; Cupertino, CA 95014; 800-441-7234 or 800-626-8847 in CA

Pascal compiler
Macintosh II, Centris, Performa or Quadra; Pacific Parallel Pac8 or Pac2.
$895 retail
Pacific Parallel Research, Inc.; 922 Grange Hall Rd.; Cardiff by the Sea, CA 92007; 619-436-1455 (phone/fax)

Programming Tools/Other

3d Graphic Tools V3.0
Three-dimensional data, wireframe/solids modeling and 1- to 32-bit color rendering functions; Zbuffer and Painter's algorithms; Phong shading, textures, arbitrary lighting
Macintosh Plus or larger; 1 MB of RAM; MPW C, Think C, MPW Pascal or Think Pascal.
$249.95 retail; full package (Windows version available)
Micro System Options; PO Box 95167; Seattle, WA 98145; 206-868-5418 (phone/fax)

All Of MacTech Magazine CD-ROM Vol. I-VIII
More than 500 MB of information for Macintosh developers
Macintosh Plus or larger; CD-ROM drive.
$299 retail
MacTech Magazine; PO Box 250055; Los Angeles, CA 90025; 310-575-4343 or 310-575-0925 (fax)

■ **Analyst Reusable Objects**
Application development tool
Macintosh II; ParcPlace Systems' Objectworks/Smalltalk.
Analyst Reusable Objects is a rich set of Smalltalk application classes and utilities and an excellent way to offer a programming staff an instant repository of reusable application development code. The product includes applications, such as Spreadsheets, Desktop Publishing, Database, E-mail and Image/Draw Editors. Other modules include a Hypertext framework for organizing information, SQL point and click database Query, Map support and Forms for creating additional interfaces. Many other utilities, including printing and data support, are also included. Analyst classes can also be used as an invaluable training aid for programmers new to the Object Oriented Paradigm. Analyst Reusable Objects is available for both Objectworks 4.1 and VisualWorks 1.0 and 2.0 on all ParcPlace-supported platforms.

PostScript language development environment
Macintosh Plus or larger; LaserWriter or other PostScript printer.
$249 retail
Adobe Systems, Inc.; 1585 Charleston Rd.; PO Box 7900; Mountain View, CA 94039; 415-961-4400, 800-833-6687 or 415-961-3769 (fax)

LINDO, Release 5.3
Linear, interactive and discrete optimizer
Macintosh Plus or larger; 1 MB of RAM.
$245 to $4,994 retail
boyd & fraser publishing company; One Corporate Pl.; Ferncroft Village; Danvers, MA 01923; 508-777-9069, 800-225-3782 or 508-777-9068 (fax)

Linear And Non-Linear Programming
Mathematical programming using Simplex and Monte Carlo techniques
Macintosh 512K or larger.
$145 retail
Lionheart Press, Inc.; PO Box 20756; Mesa, AZ 85277; 602-396-0899, 514-526-7877 or 602-396-0932 (fax)

Logo Plus For The Macintosh 2.0
Programming language
Macintosh Plus or larger; 1 MB of RAM (2 MB with System 7); System 6.0.5 or later.
$99.95 retail; program
$199.95 retail; MacPak 5
$299.95 retail; MacPak 10
$399.95 retail; MacPak 20
$450 retail; one-time site license fee/network version to 25 users ($5 per workstation thereafter)
Terrapin Software, Inc.; 400 Riverside St.; Portland, ME 04103; 207-878-8200, 800-972-8200 or 207-797-9235 (fax)

LusterPIC 1.0
Converts color PixMap pictures to display or print in non-color Macintosh environments
Macintosh Plus or larger; 1 MB of RAM.
$1,600 retail
DataPak Software; 9317 NE Hwy. 99, Ste. G; Vancouver, WA 98665; 206-573-9155 or 206-573-9269 (fax)

Mac2Win
Uses a single set of native Mac source code, a single resource file and a single development team to build a Windows version of an application
Macintosh with 68020 CPU or larger; 2 MB of RAM; System 6.0.5 or later.
Call for pricing
Altura Software, Inc.; 510 Lighthouse Ave. Ste. 5; Pacific Grove, CA 93950; 408-655-8005 or 408-655-9663 (fax)

MacApp 3.0.1
Object-oriented application framework
Macintosh with 16 MB of RAM; hard disk drive; System 7; MPW Development Environment 3.2 or later; MPW C 3.2.4, MPW C++ 3.2 and MPW Assembler 3.2.3 required for development.
$395 retail; disk version
$350 retail; CD-ROM version
APDA — Apple Computer, Inc.; PO Box 319; Buffalo, NY 14207; 716-871-6555, 800-282-2732 or 716-871-6511 (fax)

MacExpress
Instant application and user interface manager; development tool
Macintosh Plus or larger.
$195 retail
Alsoft, Inc.; PO Box 927; Spring, TX 77383; 713-353-4090 or 713-353-9868 (fax)

MacFlow 3.7
Flowchart design and development
Macintosh Plus or larger; System 6.0 or later.
$345 retail
Mainstay; 591-A Constitution Ave.; Camarillo, CA 93012; 805-484-9400 or 805-484-9428 (fax)

X Client, Motif and X Server software
Macintosh Classic or larger; 8 MB of RAM; hard disk drive; MachTen Personal or Professional.
$350 retail
Tenon Intersystems; 1123 Chapala St.; Santa Barbara, CA 93101; 805-963-6983 or 805-962-8202 (fax)

Macintosh Programmer's Workshop V3.2.3
Development system
Macintosh with 68020 processor or larger; 4 MB of free RAM (8 MB recommended); hard disk drive; System 7 or later.
$150 retail; MPW Development Environment
$150 retail; MPW Assembler
$150 retail; MPW C
$150 retail; MPW Object Pascal
$175 retail; MPW C++
MPW is available in specially priced bundles and CD-ROM-based products
APDA — Apple Computer, Inc.; PO Box 319; Buffalo, NY 14207; 716-871-6555, 800-282-2732 or 716-871-6511 (fax)

MacMumps 5.10B
Mumps programming language
Macintosh with 68020, 68030 or 68040 processor; 2 MB of RAM.
$495 retail
MGlobal; 2900 Weslayan, Ste. 415; Houston, TX 77027; 713-960-0205 or 713-960-1522 (fax)

MacParlog 2.0
Implementation of the parallel logic programming language, Parlog
Macintosh Plus or larger; 2 MB of RAM.
$540 retail; educational discounts available
Parallel Logic Programming Ltd.; PO Box 49; Twickenham; London, UK TW2 5PH; 0454-201652 or 081-874-0449 (fax)

MacsBug 6.2.2
Machine language debugger
Macintosh Plus or larger.
$34.95 retail
APDA — Apple Computer, Inc.; PO Box 319; Buffalo, NY 14207; 716-871-6555, 800-282-2732 or 716-871-6511 (fax)

■ MacSource CD-ROM
Source code, compilers, interpreters, utilities and tips
Macintosh Plus or larger; System 6.0.5 or later; CD-ROM drive.
MacSource CD-ROM is a collection of source code, compilers, interpreters, utilities and tips for Macintosh developers. Source code for every popular compiler and interpreter gives useful demonstrations on how to program the Macintosh. MacSource includes: more

■ ICONIX * INDUSTRIAL-STRENGTH * MULTI-USER *OBJECT-ORIENTED CASE TOOLS

than a dozen full language implementations; the GNU C, C++, Flex and Bison compilers; several assemblers, Basic interpreters and more; Larry Wall's Perl scripting language; utilities for all the major programming environments; and hundreds of megabytes of source code, from INITs to full applications.
$49.95 retail
Pacific HiTech, Inc.; 4530 Fortuna Way; Salt Lake City, UT 84124; 801-278-2042, 800-765-8369 or 801-278-2666 (fax)

MacTopix CD-ROM Simulator
CD-ROM simulation system
Macintosh SE or larger; 2 MB of RAM; System 6.0.7 or later.
$495 retail
Optical Media International; 180 Knowles Dr.; Los Gatos, CA 95030; 408-376-3511, 800-347-2664 or 408-376-3519 (fax)

MacYACC V4.0
Generates ANSI C source code for building assemblers, compilers, interpreters, browsers, page description languages, language translators, syntax directed editors and query languages
Macintosh 512K or larger; MPW.
$495 retail; professional version
Abraxas Software, Inc.; 5530 SW Kelly Ave.; Portland, OR 97201; 503-244-5253 or 503-244-8375 (fax)

Making It Macintosh: The Macintosh Human Interface Guidelines Companion
The perfect complement to the standard reference in the field of Macintosh interface design
Macintosh LC or larger; 5 MB of RAM; 13-inch color monitor; QuickTime (QuickTime Extension included); System 7.0 or later; CD-ROM drive.
$39.95 retail
Addison-Wesley Publishing Co.; 1 Jacob Way; Reading, MA 01867; 617-944-3700, 800-358-4566 or 617-944-8243 (fax)

Mantis Desktop Dimmer Construction Kit
Tools necessary to build stand-alone Desktop Dimmer screen savers
Macintosh Classic or larger; System 6.0.5 or later running MultiFinder or System 7.0 or later.
Free
Mantis Development Corp.; 1357 Washington St.; West Newton, MA 02165; 617-969-6434, 800-230-6434 or 617-739-6328 (fax)

Mantis Pattern Development Toolkit
Development tool; gives users the ability to create Pixel Pattern ("ppat") savvy products
Macintosh Classic or larger; System 6.0.5 or later running MultiFinder or System 7.0 or later.
Free
Mantis Development Corp.; 1357 Washington St.; West Newton, MA 02165; 617-969-6434, 800-230-6434 or 617-739-6328 (fax)

Marksman
Graphical program creation tool
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.7 or later.
$125 retail
IT Makers; PO Box 730152; San Jose, CA 95173; 408-274-8669

MARS Shuttle
Application program interface
Macintosh with 68020 processor or larger; System 6.0.5 or later.
Call for pricing
Micro Dynamics, Ltd.; 8555 16th St., 7th Fl.; Silver Spring, MD 20910; 301-589-6300 or 301-589-3414 (fax)

Matrix Engine 2.2
Macintosh List Manager replacement and much more
Macintosh Plus or larger; 1 MB of RAM; Think C, Think Pascal or MPW.
$1,500 retail
DataPak Software; 9317 NE Hwy. 99, Ste. G; Vancouver, WA 98665; 206-573-9155 or 206-573-9269 (fax)

MaxSPITBOL
Implementation of the SNOBOL4 programming language
Macintosh Plus or larger; System 6.0 or later.
$195 retail
Catspaw, Inc.; PO Box 1123; Salida, CO 81201; 719-539-3884 or 719-539-4830 (fax)

MediaMogul Mac Pak
CD-i development software
Macintosh II or larger; 4 MB of RAM; Philips 605 CD-i development player.
$7,500 retail
OptImage Interactive Services Co.; 1501 50th St., Ste. 100; West Des Moines, IA 50266; 515-225-7000, 800-234-5484 or 515-225-0252 (fax)

MemManager 1.1
Helps prevent unexpected program crashes
Macintosh Plus or larger; 1 MB of RAM.
$750 retail
$250 retail; personal license
DataPak Software; 9317 NE Hwy. 99, Ste. G; Vancouver, WA 98665; 206-573-9155 or 206-573-9269 (fax)

Metacheck And Metacals
Conformance analyzers
Macintosh II; A/UX.
Call for pricing
Advanced Technology Center; 22982 Mill Creek Dr.; Laguna Hills, CA 92653; 714-583-9119 or 714-583-9213 (fax)

Metrowerks CodeWarrior
Native devlopment environment for PowerPC
Macintosh with 68020 or larger processor or PowerPC 601 processor; 8 MB of RAM; System 7.1 or later.
$100 retail; Bronze
$299 retail; Silver
$399 retail; Gold
Metrowerks, Inc.; The Trimex Bldg., Rte. 11; Mooers, NY 12958; 514-458-2018, 800-247-6553 or 514-458-2010 (fax)

Mini IDL
Data management tool
Macintosh Plus or larger; Think C 5.0 or later.
$50 retail
Persistent Data Systems, Inc.; PO Box 38415; Pittsburgh, PA 15238; 412-963-1843 or 412-963-1846 (fax)

Moby Language
Collection of word lists for five major world languages
Macintosh 512K or larger.
$99 retail
Grady Ward; 3449 Martha Ct.; Arcata, CA 95521; 707-826-7715 (phone/fax)

Mug Shot III
Provides a system profile that can be quickly expanded
Macintosh 512KE or larger; System 6.0 or later.
$250 starting price (per year) retail; license
Mi Concepts; PO Box 8822; Kentwood, MI 49508; 616-765-3312, ext. 14 or 616-765-3325 (fax)

Oasys 68000/10/20/30/40 + 68881/851/332 Macro Assembler/Linker System
Macro assembler, linker, librarian, cross-reference utility and symbol file formatter utility
Macintosh II; 2 MB of RAM.
Call for pricing
Oasys, Inc.; One Cranberry Hill; Lexington, MA 02173; 617-862-2002 or 617-863-2633 (fax)

Oasys 680x0 Optimizing Native And Cross Compilers
C, C++, Pascal and Fortran optimizing compilers
Macintosh II; 2 MB of RAM.
Call for pricing
Oasys, Inc.; One Cranberry Hill; Lexington, MA 02173; 617-862-2002 or 617-863-2633 (fax)

Oasys 88000 Macro Assembler/Linker System
Macro assembler, linker, librarian, cross-reference utility and symbol file formatter utility
Macintosh II; 2 MB of RAM; A/UX.
Call for pricing
Oasys, Inc.; One Cranberry Hill; Lexington, MA 02173; 617-862-2002 or 617-863-2633 (fax)

C, C++, Fortran and Pascal compilers
Macintosh II; 2 MB of RAM; A/UX.
Call for pricing
Oasys, Inc.; One Cranberry Hill; Lexington, MA 02173; 617-862-2002 or 617-863-2633 (fax)

Oasys 88000 Simulator
Allows users to create a complete 88000 RISC run-time environment on a non-88000 system
Macintosh II; 2 MB of RAM; A/UX.
Call for pricing
Oasys, Inc.; One Cranberry Hill; Lexington, MA 02173; 617-862-2002 or 617-863-2633 (fax)

Object Logo 2.6
Object-oriented implementation of Logo
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later.
$195 retail; single-user license
$341 retail; five-license pack
$487 retail; 10-license pack
$585 retail; 20-license pack
Paradigm Software, Inc.; PO Box 2995; Cambridge, MA 02238; 617-576-7675 or 617-576-7680 (fax)

Object Logo Student Edition
Environment for learning and applying the concepts of computer programming; ages 11 and up
Macintosh Plus or larger; System 6.0.4 or later.
$49.95 retail; single-user license
$15 retail; Robotics Module and Documentation
$10 retail; MIDI Module and Documentation
Paradigm Software, Inc.; PO Box 2995; Cambridge, MA 02238; 617-576-7675 or 617-576-7680 (fax)

Object Master Universal
Development tool for procedural and object-oriented programming
Macintosh Plus or larger; 2 MB of RAM; hard disk drive with 2 MB of free space; System 6.0.5 or later.
$395 retail
ACI US Inc.; 20883 Stevens Creek Blvd.; Cupertino, CA 95014; 408-252-4444, 800-384-0010 or 408-252-0831 (fax)

Occam Explorer
Compiler and interpreter for learning about parallel processing
Macintosh Plus or larger.
$125 retail
Pacific Parallel Research, Inc.; 922 Grange Hall Rd.; Cardiff by the Sea, CA 92007; 619-436-1455 (phone/fax)

On-Line Help Construction Kit 2.1.1
Generates and supports a hierarchical and user-activated help system in any Macintosh application
Macintosh Plus or larger; 1 MB of RAM; Think C V4.0 or later, Think Pascal or MPW.
$1,100 retail
DataPak Software; 9317 NE Hwy. 99, Ste. G; Vancouver, WA 98665; 206-573-9155 or 206-573-9269 (fax)

OSF/Motif
User and development environment
Macintosh II; 5 MB of RAM; A/UX 3.0.
Call for pricing
Integrated Computer Solutions, Inc.; 201 Broadway; Cambridge, MA 02139; 617-621-0060 or 617-621-9555 (fax)

Overview Of Object-Oriented Analysis And Design Methods CD-ROM
Overview of O-O methods
Macintosh Plus or larger; CD-ROM drive.
Object-Oriented methodologies can be grouped into three primary classes: Data-Centered, Scenario-Based and Structural. All three of these approaches can contribute significantly to understanding the requirements and design of a system. ICONIX believes that each of the above approaches has some validity, but none of them are complete and optimal for all systems. In fact, even within a single system, one methodology

ICONIX * INDUSTRIAL-STRENGTH * MULTI-USER *OBJECT-ORIENTED CASE TOOLS
* See listing under Programming Tools/CASE, or call (310) 458-0092.

may not be optimal for describing all aspects of the analysis and design. With this in mind, ICONIX has introduced a survey training course on CD-ROM that will help users select the most appropriate methodologies for their specific project. This state-of-the-art training tool offers an in-depth comparative overview of various popular OOA and OOD methods, and also highlights the best application of each methodology. The CD-ROM also includes full multimedia presentation, including step-by-step narrative explanations and interactive demonstrations of Booch, Rumbaugh, Jacobsen and Coad/Yourdon approaches, in addition to guidelines for determining which methods are appropriate for different aspects of development projects.
$995 retail
ICONIX Software Engineering, Inc.; 2800 28th St., Ste. 320; Santa Monica, CA 90405; 310-458-0092 or 310-396-3454 (fax)

Paige 1.0
Cross-platform library to develop multiplatform applications
Macintosh System 6.x or later; Power Macintosh Windows 3. (WIN16 or WIN 32).
$3,500 retail; first platform
$500 retail; each additional platform
DataPak Software; 9317 NE Hwy. 99, Ste. G; Vancouver, WA 98665; 206-573-9155 or 206-573-9269 (fax)

PHIGURE V2.1
Graphics library
Macintosh II; A/UX 2.0 or 3.0.
$3,000 U.S. retail
G5G; Parc D'Activites Chateau Rouquey; PO Box 168; Merignac Cedex, France 33708; (33) 56-34-82-48 or (33) 56-13-02-10

PICT Detective V2.02
Gives a complete description of any valid QuickDraw picture
Macintosh 512KE or larger.
$125 retail
Palomar Software, Inc.; PO Box 120; Oceanside, CA 92049; 619-721-7000 or 619-721-4758 (fax)

PictureCDEF
Allows developers to put that cutting-edge, puffy button look into applications
Macintosh Plus or larger; System 6.0.4 or later.
$45 retail; multiproduct object code
$95 retail; source code
Paradigm Software; PO Box 688; Concordia, MO 64020; 816-463-2217

Professional IDL
For C programmers manipulating complex data
Macintosh Plus or larger; Think C 5.0 or later.
$400 retail
Persistent Data Systems, Inc.; PO Box 38415; Pittsburgh, PA 15238; 412-963-1843 or 412-963-1846 (fax)

Programmer's "Bag Of Tricks" 1.1
Programming routines designed to fill the gaping holes in the Macintosh Toolbox
Macintosh Plus or larger; 1 MB of RAM; Think C, Think Pascal or MPW.
$500 retail
DataPak Software; 9317 NE Hwy. 99, Ste. G; Vancouver, WA 98665; 206-573-9155 or 206-573-9269 (fax)

Prograph 2.5
Visual programming environment
Macintosh Plus or larger.
$495 retail
Prograph International Inc.; 2745 Dutch Village Rd., Ste. 200; Halifax, Nova Scotia, Canada B3L 4G7; 902-455-4446, 800-565-1978 or 902-455-2246 (fax)

Qued/M 2.6
Quality editor with macros
Macintosh 512K or larger.
$149 retail
Nisus Software, Inc.; PO Box 1300; 107 S. Cedros Ave.; Solana Beach, CA 92075; 619-481-1477, 800-922-2993 or 619-481-6154 (fax)

Animation control for ViewIt
Macintosh Plus or larger; System 6.0.7 or later; QuickTime; FaceWare's ViewIt module.
$75 retail
FaceWare; 1310 N. Broadway; Urbana, IL 61801; 217-328-5842

QuickHelp
Context-sensitive hypertext help system
Macintosh with 68000 CPU or larger; 2 MB of RAM; System 6.0.5 or later.
$495 retail; developer kit
Altura Software, Inc.; 510 Lighthouse Ave. Ste. 5; Pacific Grove, CA 93950; 408-655-8005 or 408-655-9663 (fax)

QuickView
Microsoft Multimedia Viewer-compatible player
Macintosh with 68020 CPU or larger; 2 MB of RAM (4 MB recommenced); System 6.0.5 or later.
$495 retail; developer kit
Altura Software, Inc.; 510 Lighthouse Ave. Ste. 5; Pacific Grove, CA 93950; 408-655-8005 or 408-655-9663 (fax)

ReferenceSet
CD-ROM development tools
Macintosh Plus or larger.
Call for pricing
Dataware Technologies, Inc.; 222 Third St.; Cambridge, MA 02142; 617-621-0820 or 617-621-0307 (fax)

ResEdit V2.1.1
Graphical resource editor
Macintosh Plus or larger.
$29.95 retail
APDA — Apple Computer, Inc.; PO Box 319; Buffalo, NY 14207; 716-871-6555, 800-282-2732 or 716-871-6511 (fax)

Resorcerer 1.2.4
Resource editor
Macintosh Plus or larger; 2 MB of RAM; 1.5 MB hard disk drive; System 6.0 or later.
$256 retail
$177 retail; educational
Quantity discounts and free demo disks available
Mathemaesthetics, Inc.; PO Box 298; Boulder, CO 80306; 303-440-0707 or 303-440-0504 (fax)

Rio Command Package
Productivity tools and system utilities for A/UX and other platforms
Macintosh SE/30 or larger; A/UX 2.0.1 or later.
$189 retail; per user
$1,890 retail; per site license
Ganusa; 34532 Northstar Ter.; Fremont, CA 94555; 510-790-2254 or 510-793-1187 (fax)

Rulers 2.2
Object code module
Macintosh SE or larger; MPW or Think Pascal or C programming environment; Word Solution Engine.
$900 retail; object code
Call for source code pricing
DataPak Software; 9317 NE Hwy. 99, Ste. G; Vancouver, WA 98665; 206-573-9155 or 206-573-9269 (fax)

SADE (Symbolic Application Debugging Environment) V1.3.2
Source-level, symbolic debugging environment
Macintosh with 68020 processor or larger; 2 MB of free RAM; hard disk drive; System 7 or later.
$150 retail
APDA — Apple Computer, Inc.; PO Box 319; Buffalo, NY 14207; 716-871-6555, 800-282-2732 or 716-871-6511 (fax)

Script-Ease
Utility for editing scripts compatible with Apple's Installer utility
Macintosh Plus or larger.
$129 retail
Glen Canyon Software; 3921 Shasta View; Eugene, OR 97405; 503-345-6360, 800-477-6947 or 503-345-6503 (fax)

ScriptGen Pro
Provides a point-and-click interface for generating scripts for Apple's Installer
Macintosh Plus or larger; System 7.0 or later.
$169 retail
$219 retail; InstallerPack
StepUp Software; 7110 Glendora Ave.; Dallas, TX 75230; 214-360-9301

ScriptIt 1.1
AppleScript manager
Macintosh Plus or larger; System 7.0 or later.
$95 retail
FaceWare; 1310 N. Broadway; Urbana, IL 61801; 217-328-5842

■ **ScriptWizard**
Provides scripters with an OSA-compatible editing environment
Macintosh with 68020 processor or larger; 4 MB of RAM; hard disk drive; AppleScript 1.1; System 7.1 or later.
ScriptWizard provides Macintosh scripters with an OSA-compatible editing environment with full testing and debugging facilities, speeding script development. ScriptWizard features an editor that allows easy navigation of complex scripts through the inclusion of a "Locator" pop-up menu from which users can instantly jump to any handler or property definition in their script. ScriptWizard's Variable-Watcher supplies the ability to see the contents of each variable as the script is executing, and watch changes step by step using the single-stepping mechanism provided. The Event Logger tracks and displays each Apple event and can optionally allow logs to be appended so that users can capture the results of a sequence of tests without losing log data. Other features, such as the improved script window design, "ver-control" toolbar and ScriptWizard's dictionary browsers, are intuitively laid out to enhance scripter productivity.
$99 retail
Full Moon Software, Inc.; PO Box 700237; San Jose, CA 95170; 408-253-7199 or 408-252-2378 (fax)

SCSI Tool
Assists in the development of SCSI hardware and software
Any Macintosh with SCSI port.
$175 retail; also available from APDA
Arborworks, Inc.; 431 Virginia Ave.; Ann Arbor, MI 48103; 313-747-7087, 800-346-6980 or 313-747-8775 (fax)

SCSI View
Assists in the development of SCSI hardware and software
Macintosh Plus or larger.
S165 retail; also available from APDA
Arborworks, Inc.; 431 Virginia Ave.; Ann Arbor, MI 48103; 313-747-7087, 800-346-6980 or 313-747-8775 (fax)

Silverrun-Application Development Environment
Development and maintenance environment for building distributed applications
Macintosh with 68030/68040 processor; 8 MB of RAM; hard disk drive; System 7.0 or later.
Call for pricing
Computer Systems Advisers, Inc.; 50 Tice Blvd.; Woodcliff Lake, NJ 07675; 201-391-6500, 800-537-4262 or 201-391-2210 (fax)

Smalltalk/V 2.0 For Macintosh
Implementation of the Smalltalk programming language
Macintosh Plus or larger; 4 MB of free disk space; System 7.0 or later.
$495 retail
Digitalk, Inc.; 5 Hutton Centre Dr.; Santa Ana, CA 92707; 714-513-3000, 800-922-8255 or 714-513-3100 (fax)

SmalltalkAgents
Tool for authoring applications and agents
Macintosh with 68xxx or Power Chip series; 5 MB of RAM with MultiFinder.
$695 U.S. retail; call for international price

■ **Work Flow Analyzer**
Data modeling and analysis
Macintosh IIfx, Centris or Quadra; 32 MB of RAM; System 7.0 or later.
Meta Software has released Design/IDEF version 3.0, containing completely redeveloped IDEF1X data modeling capabilities, improved IDEF0 process modeling, continued enhancements to import/export facilities for ABC, AML, SML and IDL, and a new integrated glossary that supports definitions of activities and ICOMs. It provides an interface to KnowledgeWare's ADW CASE toolset. Design/IDEF is a modeling front-end to Meta's WorkFlow Analyzer for Business Process Redesign, to achieve dramatically improved performance in costs, quality, service and speed. Automatically translates IDEF0 workflow models into dynamic simulation models for analysis of bottlenecks, resource utilization and operating costs. Models can be tested under differing "what if" scenarios to show the results of proposed business changes; reporting includes both integrated spreadsheets and easy-to-interpret graphs.
$34,995 retail
Meta Software Corp.; 125 CambridgePark Dr.; Cambridge, MA 02140; 617-576-6920, 800-227-4106 or 617-661-2008 (fax)

XMWS
X-Windows-based ATS compliant server
VAX X-Windows or terminal workstation.
$500 per single copy retail; run-time license
$5,000 per single copy retail; developer's license
Integrated Solutions, Inc.; 1020 8th Ave.; King of Prussia, PA 19406; 215-660-0781 or 215-664-3646 (fax)

■ **XVT Development Solution For C**
Multiplatform GUI development tool
Any Macintosh.
The XVT Development Solution for C pairs XVT-Design, a visual GUI layout, prototyping and code generation with the XVT Portability Toolkit, a thin-layered API, XVT Portability Toolkit-compatible C source code, application resources and makefiles. Applications developed with the XVT Development Solution for C will have native look and feel and single source portability to seven different GUIs and more than 30 hardware platforms. Supported GUIs include: Microsoft Windows, Windows NT, Macintosh, OS/2,

■ ICONIX * INDUSTRIAL-STRENGTH * MULTI-USER *OBJECT-ORIENTED CASE TOOLS

OSF/Motif for Unix and VMS, Open Look and Character Screens for DOS, Unix and VMS.
$1,950 to $6,300 retail
XVT Software Inc.; 4900 Pearl East Cir.; Boulder, CO 80301; 303-443-4223, 800-678-7988 or 303-443-0969 (fax)

■ **XVT Development Solution for C++**
Application framework
Any Macintosh.

The XVT Development Solution for C++ features XVT-Power++, a true application framework with powerful features, such as Field Validation, Drag and Drop, Environment Inheritance, Nested Views, Geometry Management, Imaging and the completely integrated Rogue Wave data structures. Combined with the XVT Portability Toolkit, a thin-layered API that provides native look and feel and single source portability. XVT-Power++ offers complete portability to six different GUIs, including: Microsoft Windows, Windows NT, Macintosh OS/2, OSF/Motif for Unix and VMS and Open Look.
$1,950 to $6,300 retail; depending on platform
XVT Software Inc.; 4900 Pearl East Cir.; Boulder, CO 80301; 303-443-4223, 800-678-7988 or 303-443-0969 (fax)

Project Management

AEC Information Manager
Project management
Macintosh with 1 MB of RAM.

AEC Information Manager is a project-oriented database that provides a project manager with the means to automate, schedule, organize and track correspondence, transmittals, suppliers and vendors, subcontractors, clients, equipment, proposals and much more. The program is designed to organize project information from start to finish, and on-screen status and professional-looking reports can be created and printed out at any time. User-defined reports allow unlimited content options, and all fields can be searched and included in any order in any number of reports. In addition, program reports are dynamic; as data or times and dates change, so do the reports. Other program features include a project log, work calendar, submittal log, note pad (mini word processor), global alarm; find and replace; and allows viewing information in either numeric or Gantt chart formats.
$695 retail
AEC Software; 22611 Markey Ct., Bldg. 113; Sterling, VA 20166; 703-450-1980, 800-346-9413 or 703-450-9786 (fax)

Artemis Schedule Publisher 4.1
Graphical planning and scheduling tool
Macintosh Plus or larger; 4 MB of RAM; 40 MB hard disk drive; System 6.0 or later.

Artemis Schedule Publisher is a graphical planning and scheduling tool that provides advanced project management functions without sacrificing ease of use or performance. It uses modern graphical user interface (GUI) technology to reduce learning time and improve user efficiency. Interactive barcharts and network logic diagrams are integrated with dynamic resource histograms and flexible, spreadsheet-style tables to reduce data entry time and improve information access. A distinctive feature of the system is its real-time processing of schedule, cost and resource information to provide instant answers to support rapid decisions. Artemis Schedule Publisher provides a uniquely flexible approach to reporting through a Publishing module that integrates with graphic design and drawing tools to produce high-quality, tailored report formats.
$1,995 retail
Lucas Management Systems; 12701 Fair Lakes Cir., Ste. 350; Fairfax, VA 22033; 703-222-1111, 800-477-6648 or 703-222-8203 (fax)

Business Budgeting Toolkit
Real management for real businesspeople
Macintosh Plus or larger; Microsoft Excel 3.0 or later, Lotus 1-2-3 Mac or compatible spreadsheet.

The Business Budgeting Toolkit gives users a simple way to develop realistic budgets, keep track of milestone dates and follow up with tracking of actual results and dates. This is the way to set specific goals and budgets and get it done, on time and on budget. The Business Budgeting Toolkit can be used to develop budgets for a user's business, business group, project or division. Users set up specific activities with monthly expense budgets, completion dates and responsibility assignments; evaluate on fixed and variable spending, or controlled and uncontrolled; summarize planned or actual spending by group, function or person responsible; illustrate budgets with pre-programmed business pie charts and bar graphs; print charts and reports; and integrate the budget with other business planning and forecasting spreadsheets. Other features include: links strategy to budgets; tracks plan vs. actual spending; simplifies follow through; excellent documentation; and includes a valuable implementation guide.
$149.95 retail
Palo Alto Software; 144 E. 14th Ave.; Eugene, OR 97401; 503-683-6162, 800-229-7526 or 503-683-6250 (fax)

CB CoCoMo
Allows software developers to reliably estimate the time and cost of a software development project
Macintosh Plus or larger; 2 MB of RAM recommended.

CB CoCoMo solves the "vaporware" problem by integrating two established technologies: the Constructive Cost Model (CoCoMo) and Crystal Ball's Monte Carlo Simulation. With Monte Carlo Simulation, users can assign a range of numbers with probabilities to each input variable, such as program size or programmer ability, rather than one firm number. Instead of a single result, the output from the program is a range of possible estimates, showing the best case, worst case and most likely schedules and budgets. Users can then determine deadlines with a given probability of being achieved. For example, a company might announce a product's delivery date using a schedule that has a 90 percent chance of being met.
$195 retail; CB CoCoMo
$395 retail; Crystal Ball and CB CoCoMo bundled
Decisioneering, Inc.; 1600 Stout St., Ste. 700; Denver, CO 80202; 303-292-2291, 800-289-2550 or 303-534-2118 (fax)

CoCoPro
Estimates resources for software development projects
Macintosh II or larger.

CoCoPro estimates resources needed to complete a software development project. The program uses exponential functions and attributes to calculate development costs. The former provide the basic formulae, the latter furnish the modifiers — parameter settings pertinent to a specific project. These modifiers cover personnel experience and capabilities, project complexity, product factors and hardware limitations. To compute costs, a user enters salary/overhead costs and code length information into the system, selects attribute and model levels and CoCoPro provides the calculations. Input includes personnel cost per month, code length, attribute levels and model selection. Output includes cost per code line and entire project, development time and time distribution over project phrases. The tool allows users to calibrate the cost drivers based on actual history.
$1,495 retail
ICONIX Software Engineering, Inc.; 2800 28th St., Ste. 320; Santa Monica, CA 90405; 310-458-0092 or 310-396-3454 (fax)

Cost/Schedule Workshop (CSW)
Tools to manage a project's cost and schedule
Macintosh SE or larger; hard disk drive; System 6.0 or later.

The Cost/Schedule Workshop (CSW) is a collection of tools designed specifically to meet the needs of managing a project's cost, schedule and risk. Each tool performs independently with capability to exchange information among CSW tools and other applications. RAM produces project status and information matrixes, dictionaries, indexes, risk assessment, automatic coding and project budget baseline information based on project data for each WBS, OBS and Cost Account within a project. PMDA produces analysis reports, charts, commentary and completion forecasts based on performance measurement data for each WBS and Cost Account within a project. FEAC produces a schedule critical Estimate at Completion for each WBS and Cost Account within a project based on performance measurement data and key schedule sensitive empirical data.
$995 retail; RAM 2.0 (Responsibility Assignment Matrix)
$595 retail; PMDA 4.0 (Performance Measurement Data Analysis)
$295 retail; FEAC 2.0 (Forecasted Estimate at Completion)
Leckie Associates, Inc.; PO Box 160; Merrimack, NH 03054; 603-424-7014 or 603-429-3428 (fax)

■ **Design Estimator**
Estimating, bidding and quoting system
Macintosh II or larger; 4 MB of RAM; System 7.0 or later; hard disk drive with 9 MB of free space.

Design Estimator is an estimating, bidding and quoting system that has produced accurate and quick results in more than 240 industries. Estimator was specifically designed to reduce the amount of time and effort spent calculating labor and materials costs. Now users can draw floorplans and any other home designs with any of Abracadata's Design Your Own Home programs, then estimate the cost of the projects before building them. Drawings are estimated in seconds without re-typing, and the budget can be tracked by programs like Quicken.
$99.95 retail
Abracadata, Ltd.; PO Box 2440; Eugene, OR 97402; 503-342-3030, 800-451-4871 (sales) or 503-683-1925 (fax)

EPlanner 2.0
Project planner based on the gantt chart
Macintosh 512K or larger.

EPlanner, formerly Endeavour Planner, is a project planning and tracking application that has a simple, interactive, fully graphical interface. Users work directly with a gantt chart. Changing the position or duration of items on the chart automatically and visibly readjusts the scheduling of items. Users also have the option of locking tasks and deadlines on the gantt charts so they cannot be automatically moved, but must be specifically changed by a user. Dependencies between tasks, milestones and task duration can all be set and modified. Users can also track actual project time vs. planned project time. Each project has a calendar that can be used to specify holidays, partial work days and working hours for any day of the week. Any changes to the calendar are incorporated into the project. Time scales can be updated to display intervals from 15 minutes to four weeks.
$255 retail
SoftStream International, Inc.; 106 State Rd.; N. Dartmouth, MA 02747; 508-991-4011, 800-262-6610 or 508-991-4223 (fax)

FastTrack Resource
Resource allocation tool
Macintosh Plus or larger; 1 MB of RAM.

FastTrack Resource is a simple resource allocation tool for managing people, rooms, equipment, time and activities. It equips managers with the information necessary to make the decisions to best allocate resources to meet deadlines. FastTrack Resource gives answers to typical management questions: When does a project need to be completed? Which resources are qualified to work on the project? Where are the rest of my resources? Which resources are available?
$249 retail
AEC Software; 22611 Markey Ct., Bldg. 113; Sterling, VA 20166; 703-450-1980, 800-346-9413 or 703-450-9786 (fax)

FastTrack Schedule 2.1
Allows users to create and update presentation Gantt charts
Macintosh Plus or larger; 1 MB of RAM.

FastTrack Schedule lets users create and update presentation-quality schedules quickly and easily. Whether users need a quick scheduler or a full tracking system, FastTrack Schedule has it all. Users enter activities by drawing bars directly on the schedule (Gantt chart) or type dates to have the bars drawn for them; design custom bars and milestones to create libraries of styles; view the timeline in any unit from hours to fiscal years, or use their own generic units; outline projects to any level and then collapse levels to summarize dates; add unlimited columns to both sides of the graph and choose from 13 different pre-defined field types; track

activities scheduled and actual dates, as well as percent complete; link activities graphically to create dependencies; enhance schedules with graphics, logos, floating text blocks and titles; and import and export information with other project management programs, spreadsheets, databases or any other applications that can read/write ASCII text. Because FastTrack Schedule runs on both Macintosh and Windows, everyone can open a user's files.

Great Gantt! V1.4
Gantt charting tool
Macintosh Plus or larger; hard disk drive recommended.

Great Gantt! is a Gantt charting tool that features automatic MacProject, MacProject Pro, Micro Planner Expert and Micro Planner V6 readers. In just moments, users can go from the most basic chart to presentation-quality Gantt outputs from their data. Or, users can build Gantt charts from scratch, using Great Gantt!'s powerful editing tools. Great Gantt! goes beyond the basics to provide flexibility, customization and creativity in Gantt charts. Users can create their own symbols to show critical path, progress, milestones, interfaces and start and end dates, or use Great Gantt's own rich set of symbols. Users can move the status line to do what-if scenarios, and charts can span multiple pages.

Helix Tracker 1.0
Organizes projects, tasks and documents
Macintosh Plus or larger; 2 MB of RAM (server); 1,200K of RAM (client; additional memory will be necessary to launch another application); hard disk drive; System 6.0.5 or later.

Helix Tracker is an application solution created with Helix Express technology. An indispensable scheduling tool for any workgroup, Helix Tracker organizes projects, tasks and documents to facilitate timely and efficient completion. Helix Tracker allows users in a workgroup to route or distribute tasks, comprised of due dates, instructions and documents, to other users in the workgroup. The initiator of a task can check the status at any time and notify users when tasks are late, or when changes are needed. A complete audit trail is maintained for all tasks. Each version of a document created by each user is automatically saved, eliminating possible problems caused by multiuser access to a single document. Helix Tracker provides a storage area where documents can be filed for easy retrieval by all users. Users can store and search for a document by a key word, then launch it in its native format, regardless of the program in which it was created.

Helix Technologies; 744 Pinecrest Dr.; Prospect Heights, IL 60070; 708-465-0242, 800-364-4359 or 708-465-0252 (fax)

HyperProject
Project management
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.

HyperProject is a stand-alone project management application that provides a multiwindowing environment that includes PERT, Gantt, spreadsheet and histogram window views. Features common to all HyperProject windows include: no program limit to the number of project windows that can be displayed and edited; any symbols can be copied/pasted between windows; no program limit to the number of symbols that can be created; all windows maintain their own formatting, font, zoom, scroll and other relevant display characteristics; activities and milestones can be added at any time from the menu or tool palette; addition of activities in any window updates the other related windows; several formats for numeric information and calendar dates; all graphics annotation can be saved for later recall; any window can be printed or saved as a PICT file; all window views support notes, pictures and text; provides calendar-based notes; data can be dynamically moved and altered; supports full CPM scheduling; and more.

HyperProject Lite provides all the features of HyperProject with one exception — the program is limited to the creation and scheduling of 30 activities. It is a cost-effective option for those involved in the planning and management of small or personal projects.

MacProject Pro 1.5
Project manager/planner
Macintosh Plus or larger; 2 MB of RAM (4 MB for System 7); floppy disk drive and hard disk drive; System 6.0.5 or later.

MacProject Pro is project management software for anyone who needs to plan and manage schedules, resources and budgets for any size project. Version 1.5 delivers all the previous project management power of MacProject Pro 1.0 — integrated outlining, powerful new schedule and resource management capabilities, presentation-quality charts and reports and full System 7 support for easy data sharing with other users and applications — plus: MPX import/export lets users exchange project data with Microsoft Project 3.0 for Windows and Macintosh and other project management applications supporting the MPX format; AppleScript support; enhanced Apple Events support; default chart display combines an outline and PERT chart display to speed project brainstorming and scheduling; multi-item outline scheduling allows users to schedule any number of project tasks in the outline simultaneously in the schedule (PERT) chart; floating tools palette with 18 frequently used tools; major and minor timeline scales; one-step perspectives; full-featured project outline; automatic outline numbering; embedded text; outline summaries; user-defined outline column display; cost roll-ups; automatic Work Breakdown Structure (WBS) generation; eight schedule constraints; unlimited task calendars; cross-project dependencies; baselining of all or selected tasks; custom summaries; lead and lag time; "sweeping" actuals; project overview; multiple open documents; unlimited task resources; cross-project resource leveling; precision zooming; custom chart and report generation; and much more.

MacSchedule 3.0
Project planning and tracking
Macintosh Plus or larger; System 6.0 or later.

MacSchedule is a visual schedule design and presentation application that automates the design and creation of Gantt-type schedule charts. The program facilitates status tracking; work progress, early and late starts and schedule slips are automatically handled. Schedules can be quarterly, monthly, bimonthly, weekly, daily, hourly or free form. Standard stop, start and milestone symbols are provided, or a user can create custom symbols. Charts can be printed on a LaserWriter, ImageWriter, plotter, color printer or exported to a desktop publishing program, such as PageMaker, for inclusion in proposals and reports. Version 3.0 adds a streamlined interface with better tool organization. Also, earned value analysis is a method of relating three project factors: planned value, earned value and actual cost. This provides a simple indication of the project's financial and schedule status. Users can calculate and graph a project's cost and schedule variance.

MacSys Project Monitor
Project monitoring database system
Macintosh SE/30 or larger; 8 MB of RAM; 80 MB hard disk drive.

The MacSys Project Monitor is a 4th Dimension-based client/server project monitoring system for non-profit agencies. This system is designed to monitor and evaluate imprest funded projects in a user-friendly fashion. The system operates in a tiered structure by monitoring financial disbursements to many programs, each of which may administer many sub-projects. The MacSys Project Monitor allows for the timely preparation of project-related financial statements. Detailed summary reports of all programs assures ongoing accurate financial management and specific goal monitoring. The system allows for detailed monitoring of project spending and serves as a valuable tool in identifying poorly run projects. This system has particular relevance to large organizations with national or international level projects. Multilingual customized reports are supported. MacSys Project Monitor is customizable as required.

Micro Planner Manager
Project management
Macintosh SE or larger; 2 MB of RAM; hard disk drive.

Micro Planner Manager is a mid-range project management package. Project modifications can be made from Pert, Gantt, Table or Outline format. The Report Designer allows users to supplement the dozens of standard reports with user-defined formats. Micro Planner Manager calculates payments and manages budgets and cash flow to accommodate corporate and government requirements. It includes standard reporting, earned value costing, job costing and cross project resource leveling. With a WBS, users can roll up costs and schedules to any level (up to 1,000 levels). This allows the proper amount of detail to be presented to different levels of management. Capacities include: 1,500 operations (unlimited size using linked projects); 250 resource categories; 250 zone, responsibility and cost codes; 250 calendars; time units in minutes, hours, days or weeks; arrow; and precedence. Manager can open MicroSoft projects .MPX files.

Micro Planner X-Pert
Project and resource management
Macintosh SE or larger; 2 MB of RAM; hard disk drive.

Micro Planner X-Pert is a project and resource management program designed for the department, division or corporate manager to "put it all together." The program reads MacProject II and Micro Planner files to provide control over many simultaneous projects. Resource leveling across multiple projects allows for optimization of scarce resources across the organization. The latest in graphics allows for project modifications to be made from Pert, Gantt, Table or Outline format. Report Designer allows supplementing the dozens of standard reports with user-defined formats. The program includes earned value costing and 1,000 levels of work breakdown. It allows for 15,000 operations and 100 subprojects; 250 resource categories; 250 zone, responsibility and cost codes; 250 calendars; time units in minutes, hours, days or weeks; and arrow and precedence. X-Pert can open MicroSoft project .MPX files.

Microsoft Project 3.0
Project management
Macintosh Plus or larger; 2 MB of RAM (2.5 MB recommended for MultiFinder or System 7); 800K floppy disk drive and hard disk drive; System 6.0.4 or later.

Microsoft Project is a powerful project management application that users can use for planning, scheduling and charting project information, as well as for presenting project information to others. If users plan or manage projects of any size, Microsoft Project makes it easy to plan accurately, manage wisely and communicate effectively. Major features include: easy to enter and update project information; great looking presentations and reports, including a new monthly calendar report; multiple page print preview; spell check just like Microsoft Excel; schedule tasks and resources across multiple projects; powerful scheduling features; and it works across platforms and applications.

Milestones Planning For Successful Ventures
Plan and monitor new ventures
Macintosh Plus or larger; HyperCard 2.1 or later.

Milestones Planning For Successful Ventures is software for use in the planning and monitoring of ventures. It incorporates the capability to establish assumptions in venture planning and monitoring; test those assumptions in milestones; assign levels of involvement to various individuals (i.e., responsibility, veto, support, information); establish estimates and actual timeframes for milestone completion; and set forth estimated and real costs of the milestones. The software enables users to view specific milestones or look at an overview of the entire project based on milestones and/or individual accountability.

Negotiator Library Series For Negotiator Pro
Library of negotiations
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; Negotiator Pro.

The Library contains examples of actual negotiations: the issues, the negotiating style of the involved parties, the characteristics of the negotiation planning and the outcome. The Library can be studied against a current situation to increase the chance of a favorable outcome. The Library contains examples from important negotiations involving real estate, labor, purchasing, project management, litigation, technology licensing and human resources. There are other examples on buying a car; negotiating for increased job responsibility and compensation; establishing terms for purchase, sale or lease; sharing limited resources; defining job responsibilities; and even how to win over difficult people.

The second module, Financial Turnaround, serves as an informative map of the steps an expert would advise a company to take to restructure its financial liabilities, reposition itself for further growth and increase its attractiveness to investors. The third module is for purchasing and the fourth module is for sales.
First module free with Negotiator Pro

Project Planner (PERT & CPM)
Project planning, critical paths and gantt charts, optimum assignments, job-shop scheduling
Macintosh 512K or larger.

Project Planner (PERT & CPM) is designed to handle the specific problems of job shop scheduling and optimum assignments. The major project planning programs are based on the PERT and Critical Path Analysis techniques. A user must prepare the network of activities, and the programs will analyze the network and provide various results useful for scheduling purposes. PERT produces the critical path and the probability of finishing on time. CRITPATH produces the critical path and then provides a report on all non-critical activities, giving the latest starting times, the earliest finishing times and so forth. The program allows full and selective crashing to see whether or not an extra expenditure of money will speed up completion of the project. Planner is a full-featured project management program that allows the inclusion of holidays in the schedule, continual updates of activities, the preparation of cash flow reports, the printing of Gantt charts and more.

Project Scheduler 5
Project management
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.

Project Scheduler 5 is a powerful, yet easy-to-use project manager. Project managers can create dependencies, allocate resources and update schedules across multiple projects and generate customized, multilevel reports to keep all involved parties informed of project progress. Project Scheduler 5 allows users to load multiple projects into memory simultaneously, while clearly displaying the resource utilization for each one. It automatically calculates the critical path and accounts for resource-cost inflation. It provides powerful interactive and automatic resource leveling that allows users to create valuable what-if scenarios. In addition, it offers highly flexible reporting options that let managers generate high-impact reports for presentations, customized with up to 10 levels of information. Features include: flexible working options; organizational capabilities; project calendar and resource definition; tracking and analysis; and file compatibility with PS5-DOS, PS5XL for OS/2 and PS5 Macintosh. It is System 7 compatible.

Schedule Publisher
All-purpose GUI scheduling program
Macintosh Plus or larger; 2 MB of RAM; 5 MB of free disk space; System 4.1 or later.

Schedule Publisher is an all-purpose GUI scheduling program that provides efficient and easy-to-use scheduling tools for all levels of management. Available on Macintosh, Windows, XWindows and Unix platforms, data files are directly transferable between platforms. Many project information views are available: schedule bar chart, logic diagram, resource histogram, table data and combinational views. Full CPM logic capability allows complex network relationships to drive the project, while automated resource leveling can optimize the user's schedule and eliminate conflicts. Actual costs can be pulled in from external accounting systems for real cost feedback into the user's schedule, while earned value analysis can provide integrated cost and progress tracking. Resource usage and cost tables are calculated automatically. Schedule Publisher provides many symbolic activity and event representations, as well as control over color, pattern, fonts and scaling. The calendar can be easily adjusted to show any range, and multiple user-defined calendars allow realistic planning around weekends, shifts, vacations and holidays. Rollup, Merge, Merge-Link and Subprojects provide a multitude of options for schedule summarization and integration. Multiple Baselines add precision to tracking schedule changes and slippages, while sorting, matching and user-saved views yield unparalleled flexibility. An import/export capability makes it easy to utilize existing information. Schedule Publisher facilitates the production of professional-quality reports, which provide concise information about the user's project plan and progress.

Syzygy
Project tracking software
Macintosh SE/30 or larger; 2.5 MB of RAM; hard disk drive or AFP server; System 6.0.3 or later.

Syzygy is project tracking software designed to help users stay on top of day-to-day office projects and tasks. Today's business landscape is constantly changing. Instant response is essential to compete effectively. Priorities change from minute to minute, affecting resource and budget requirements, projects and tasks, people and assignments. Syzygy is designed to handle this hectic pace. Unlike project management software that focuses on optimizing a single project schedule with complex tools, Syzygy is designed to allow tracking of multiple projects by a group of people with easy-to-use tools like work outlines, timelines, to-do lists for individuals and groups and calendars. Whether an individual, part of a department, a multifunctional task force or any kind of business team, Syzygy is the tool for keeping track of all those projects for which a user and their team are responsible.

Task Monitor
Project management
Macintosh Plus or larger; 1 MB of RAM; System 6.0.1 or later.

Task Monitor is an easy-to-use, full-featured project management program designed to plan, monitor and control large and small projects. Organizing the data and presenting it in a manner that is easy to understand is Task Monitor's strong point. A powerful sort and filter capability, coupled with a flexible tabular and graphics report generator gives users the tools necessary to meet the most demanding requirements. Reports are easy to prepare and can be customized by selecting the type of data and the choice of Gantt symbology. PERT charts are also customizable, the activities are laid out logically and positioned according to calendar time.

Tracker XT
Quark XTension that tracks productivity and scheduling
Macintosh Plus or larger; QuarkXPress.

Tracker is a Quark XTension designed for tracking productivity and scheduling in the work environment. Tracker is a project management tool for administrators to schedule jobs, track job completions, generate reports and send instant notifications to their production team. An electronic log keeps track of how long someone has been on a project, whether or not a job was completed on time and names, dates and elapsed times for everyone logged on a job. Tracker takes this information and produces it in the form of tracking reports. With Tracker's messaging option, administrators can immediately communicate any new deadlines or job changes to their production team.

VS*3 JobSight Estimating System
Subcontractor estimating system
Macintosh Classic II or larger; 4 MB of RAM; System 6.0.5 or later.

VS*3 JobSight is a fully-featured subcontractor estimating system. It builds jobs through phases/sections, allowing for individual labor units for each material item or assembly. User-established Direct Job Expense (DJE) categories and Assemblies may be established, allowing for quick selection while estimating, as well as reducing the possibility of overlooked items. Pre-established Adjustments, Markups and Overhead percentages are maintained and automatically built into the estimate, yet easily modified if necessary. Standard proposal formats are available for customization and multiple reports showing cost and profit analysis. VS*3 Remote Turnkey Support provides experienced personnel that are able to assist in installing and bringing the system live. Through standardized telephone interviews and training, Vertical Solutions Management is able to help eliminate the trial and error procedures usually associated with new system use.

WorkPlan
Develops budgets and timelines for professionals who charge by the hour
Macintosh Plus or larger; Microsoft Excel.

WorkPlan quickly generates budgets and timelines for proposals and tracks ongoing projects. Each task on a WorkPlan can be allocated among seven individual billing rates, with four expense categories. Projects may be broken into phases, with phase subtotals and budget limits defined. Timelines can be defined forward from a start date, or backwards from a completion deadline, with optional critical paths and midpoint deadlines. WorkPlan creates a budget summary for each project with task, cumulative expense graphing and timeline.

Microsoft Excel 5.0
Complete spreadsheet with business graphics and database
Macintosh Plus or larger; 1 MB of RAM (2 MB with System 7); one 800K disk drive and hard disk drive; System 6.03 or later (some features require System 7.0).

Microsoft Excel for Macintosh sets a new standard for spreadsheets. Microsoft Excel features IntelliSense technology — built-in intelligence that senses what users want to do and produces the results users want. Routine tasks are automatic and complex jobs are easier, freeing users to focus on their analysis, rather than their data. Rich custom development tools, such as Microsoft Visual Basic for Applications, provide programmability found in no other macro language. Microsoft Excel maximizes the Macintosh by supporting key technologies like AppleScript, PowerTalk and QuickDraw GX. All of this means that Microsoft Excel works the way the user wants it.

MobileCalc, The Newton Spreadsheet
Spreadsheet for Newton technology PDAs
Newton MessagePad; memory card; Macintosh Connection Kit.

MobileCalc is a spreadsheet designed specifically for Newton technology PDAs. With MobileCalc, users can perform what-if analyses, modify sales forecasts, give cost estimates, prepare expense reports, project P&L statements, negotiate a business deal and even tackle engineering and scientific problems. There are more than 70 financial, statistical, engineering/scientific and general math functions built right in to the product. MobileCalc can also be used for data collection in the field. MobileCalc was designed for the small screen and handwritten input of Newton PDAs. MobileCalc's innovative features include: Smart Cell Input — users can freely write outside and larger than the cell and MobileCalc automatically placing the number on the intended cell (simply write over numbers for quick changes); and Recognition Enhancer — significantly improves handwriting recognition by enabling users to activate numbers-only recognition.

What's Best! Release 2.0
Lets users automatically find optimal solutions in spreadsheet models
Macintosh Plus or larger; 2 MB of RAM; Microsoft Excel.

What's Best! lets users automatically find optimal solutions in spreadsheet models. It puts the power of linear and integer programming at a user's command without the need for a mainframe computer and a degree in advanced mathematics. Business managers can use What's Best! to increase efficiency in resource allocation. OR/MS professionals will appreciate What's Best! too. That's because What's Best! is a serious linear programming tool that incorporates the state-of-the-art LINDO optimizer. What's Best! will help users communicate complex ideas using the widely understood and very visual spreadsheet environment.

Time & Billing Software

4th Power Job Billing
Time and billing software
Macintosh Classic or larger; 2 MB of RAM.

4th Power Job Billing is complete, flexible and integrated time tracking software for the creative design industries that offers full job management under one roof. It starts with the creation of job records and estimates and controls timesheet entry, POs, insertions and other costs posted to the job. Billing is then done seamlessly at the touch of a button. Output is unlimited with powerful search, sort and report editors, as well as built-in word processors. Built-in profitability tools restrict loss and realize profit. Users can seamlessly upgrade to Honeybee's higher-end solutions (4th Power Service) for full accounting integration. This solution is ideal for design firms, ad agencies, multi-media shops, architects and large internal agencies.
$795 retail; single user
$2,795 retail; multiuser

Aatrix TimeCard 2.0
Allows automated "punch-in/out" of company-issued time cards; multiuser
Macintosh Plus or larger.

Aatrix TimeCard accumulates time per employee or project. A multiuser version is available. A variety of reports can be printed and include both job costing and billing amounts. The reports can be transferred to Aatrix Payroll or Aatrix Ultimate Payroll for automatic employee paycheck calculations or to Aatrix TimeMinder for time billing purposes. Aatrix TimeCard interfaces with bar-code readers and employee ID card slot readers. When combined with optional hardware, it allows automated "punch-in" and "punch out" of company-issued time cards. The program also provides employee time calculations for payroll, time billing or productivity analysis. The software/hardware combination includes an audio greeting and provides a warning of improper ID card users.
$399 retail; Employee ID card slot magnetic stripe reader sold separately
Aatrix Software, Inc.; PO Box 5359; Grand Forks, ND 58201; 701-746-6801, 800-426-0854 or 701-746-4249 (fax)

Aatrix TimeMinder Version 2.0
Time billing; employee productivity tracking; invoicing system; comes with DA
Macintosh Plus or larger.

TimeMinder is an automated time-recording program designed to keep track of time spent on projects or tasks. The multifunctional program allows a Macintosh to serve as a time-billing program, as a project-billing program, as a computer-usage meter, as an employee productivity tracking device and as an accounting system. TimeMinder files are capable of handling up to 255 projects per file with up to 100 actions per project. The desk accessory allows users to temporarily halt time tracking during interruptions. The AttachNote feature allows users to add up to a two-page note describing each work session. A Manual Entry feature lets users include "out of office" time, time logs and time sheets. Time editing allows for reviewing or correcting time records. Variable billing rates or costs are allowed. TimeMinder prints invoices, ages receivables and calculates sales taxes. Miscellaneous items and constant fees may be included.

Bill-It 4
Accounts Receivable, sales, billing, customer files, invoicing, customer labels, custom invoice, auto backup
Macintosh Plus or larger; external 800K disk drive; printer.

Bill-It is an integrated accounting program for small businesses consisting of Accounts Receivable, Billing, Inventory List, Invoicing and Sales. Any or all of its parts can be implemented at the discretion of a user. All data-entry screens look like the paper forms the business is now using. The design of the program makes it particularly useful for both retail merchants and small service firms. The Inventory section is set up so that items need not be merchandise. Items could be hourly labor charges, medical lab procedures, thesis pages typed, golf lessons or anything else for which a unit price can be set. Bill-It is optimized for about 4,000 customers and 4,000 inventory items. In practice, it is limited primarily by memory and disk storage space. All transactions are immediately recorded to disk. If there is a power failure, only the last transaction can be lost. The program provides a complete audit trail, and data files are stored as ASCII code that can be accessed for reference or hard copy by a word processing program.

Components Job Cost/Time Billing
Tracks time and expenses
Macintosh Plus or larger; 2 MB of RAM.

Components Job Cost/Time Billing is designed for professional firms and contractors. This package tracks time and expenses for ad agencies, graphic designers, architects, engineers, lawyers and builders. Key features include budgeting, estimating, multiple billing schedules, expense markup and cost analysis. Automatic billing can be formatted using the integrated forms toolbox. Productivity reports can be created by employee or job. Total costs and budgets can be tracked, and gross profit reports can be printed. Built-in receivables capability allows the calculation of finance charges, maintenance of aging history and printing of monthly statements. Job Cost/Time Billing integrates with Components Accounts Payable and Components General Ledger.
$1,495 retail; network option available
Satori Software; 2815 2nd Ave., Ste. 295; Seattle, WA 98121; 206-443-0765 or 206-728-7068 (fax)

Dealer Cost Estimator
Product cost estimating and forms
Macintosh Plus or larger; Microsoft Excel 2.2a or later.

Dealer Cost Estimator is a product cost estimating system that automatically calculates all the input data and provides a separate form for the dealer and customer. Data is entered into a dealer estimate form that allows input of product description, quantity, part number, dealer cost, unit price, unit totals and percent mark-up. The program calculates the customer's unit cost, quantity mark-up totals and sale amount. The information from the dealer estimate form is automatically transferred to the customer form, providing only the customer itemized information. A macro is included that lists all the dealer estimates and provides a running total of all the estimates.

Freemyers Design; 575 Nelson Ave.; Oroville, CA 95965; 916-533-9365

DesignSoft StopWatch DA
Keeps track of billable computer time
Any Macintosh.

StopWatch DA is a simple desk accessory that keeps track of billable computer time. Users start and stop the StopWatch timer when they start and finish working. (StopWatch will even continue timing if the computer is turned off.). StopWatch saves each work session to a computer timesheet along with a description that can include job number, time code and employee. StopWatch can be used by itself or it can export timesheets directly to the optional DesignSoft Time & Billing system job files. StopWatch will print a user's timesheet or export it to a text file for importing into billing programs, spreadsheets or any application that imports data.
$29.95 retail
The DesignSoft Co.; PO Box 1130; Wheaton, IL 60189; 708-858-5363, 800-426-0265 or 708-653-0647 (fax)

DesignSoft Time & Billing
Allows users to track and invoice time and costs for all projects
Any Macintosh.

DesignSoft Time & Billing software products are designed to be easy to use, affordable and expandable. Built on the core Time & Billing program, each of the six additional software modules adds a new time-saving feature. The additional modules are: StopWatch, Accounting, Search & Report, Batch Archive & Delete, DSQ-DataLink (Link to Quicken) and Convert. DesignSoft opens a job file for each project a user adds to the system. It keeps track of job time, expenses and budgets. It prints an invoice to a user's custom invoice design. Job numbers, time, expense, employee, vendor and client codes are all user definable. Billable employee time automatically imports into job files if employees use the optional StopWatch DA. Statements and custom reports are available from additional modules.
$299.95 retail

LapTrack For The Mac
Lets users record time and expenses
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.2 or later.
LapTrack allows users to record time and expenses easily — whether they're in the office or in the field using a portable computer. Reports within LapTrack include time and expense sheets, budgeting and productivity analysis reports and graphs. The address book feature allows users to easily access each client's address and phone number outside of the office. Users may optionally dial clients' phone numbers through AppleTalk Remote Access (or similar product) and track the length of the call. Data may be transferred to Timeslips III for the Mac for billing or other payroll, contact management, job cost and project management software systems. And it's easy to add new LapTrack users to a multiuser office site; just purchase a separate copy for each computer.

MacLaser Biller
Allows firms to bill clients for pages printed on laser printers and imagesetters
Macintosh Plus or larger; 1 MB of RAM; System 6.0.3 or later.
MacLaser Biller allows Macintosh firms to bill clients for pages printed on laser printers and imagesetters. Firms now use the laser printer as a photocopier, for example, to print the second and third copies of a letter. MacLaser Biller intercepts Print commands using a System Extension. Before users print a document, the MacLaser Biller screen appears and asks whether the job is billable, non-billable or billable for all copies except the first copy. Users can then enter a matter and client ID, or select a matter and client ID from MacLaser's Lookup table. The print job is then completed, and MacLaser Biller records total billable and non-billable pages printed. It also automatically records the user's name, document name and printer used. This data is written to a text file on one or more central file servers, and the data can then easily be exported to the firm's accounting system on a Macintosh, PC, AS/400, etc. Essentially, the data goes into the accounting system as if it were photocopy data from one of the standard photocopy count control devices. The printing is then charged to the client accordingly. MacLaser Biller works with Canon, Agfa, Linotype, etc.

OfficePro TimeClock
Records and tabulates activity time
Macintosh Plus or larger; Microsoft Excel 2.2 or later.
OfficePro TimeClock is a software timeclock that records Time In and Time Out at the click of a button for one to 50 workers, or by a single worker for up to 50 job actions or different jobs. TimeClock automatically produces detailed weekly, bi-weekly or four-week time logs, with optional daily or weekly overtime totals, and features optional manual time entry for past and future events and a choice of easily set security and reporting options. Now includes worksheets for tracking sick leave, vacation time, etc. California-standard overtime version is also available.

OfficePro TimeSheet
Provides a flexible system for tracking time per worker and job
Macintosh Plus or larger; Microsoft Excel 4.0 or later.
OfficePro TimeSheet tracks and records time by client, job and job task for service professionals who bill by the hour. Time entries are made chronologically to a simple Time Entry form that sorts and collates entries and posts them to a weekly TimeSheet. Job names, task descriptions and billing period dates automatically display when job numbers, task codes and time are entered. Individual workers log in their own time, incrementally, weekly or monthly; or pass paper logs to an administrator for batch entry. The weekly TimeSheets are linked to a Master JobList, annual worker Time Summaries and cumulative Job Reports. Job Reports display job activity by date or worker with cumulative hours and billing rates. Text export files can be imported to accounting software. Macros automate TimeSheet formatting, printing and Time and Job Report posting. Setup routines for maintaining a Master JobList, employee, job and job task lists are also macro automated.

Project Billing 1.6
Time and project billing designed for graphics designers, architects, engineers and other professionals
Macintosh 512K or larger.
Project Billing is a full-featured, professional time and project billing package. The program features automatic expense mark-up and Work-In-Progress capabilities and employee costs and billing rates. All information can be sorted by project number, employee, date and type of transaction to be sent to the necessary report. A multiuser version allows for remote entry by any employee using his or her own computer and a file server. A security system and additional project capacity are also included.
$195 retail; Project Billing

ReproLog
Organizes and tabulates billable reprographic expenses
Macintosh Plus or larger; Microsoft Excel 2.2 or later.
ReproLog organizes and tabulates billable reprographic expenses (photocopying, blueprinting, laser printing, faxing, etc.). Users post individual items to a quick entrylog. ReproLog then computes charges, adds mark-ups and accumulates total charges to a job list, dramatically speeding up a tedious manual task. Two styles (sheet and tablet) of ready to print forms for logging activities at each printer, copier, etc., are included. ReproLog can be modified to log in mileage and travel expenses. ReproLog is System 7 compatible.
$24 retail
StormWorks; 2321 Englewood Ave.; Durham, NC 27705; 919-286-6638 (phone/fax)

Running On Time 2.0
Integrated, multiuser time sheet recording and billing system
Macintosh Plus or larger; 2 MB of RAM; hard disk drive.
Running On Time is a complete time sheet and expense account recording and billing system that delivers integrated time sheet tracking, expense account control and project management capabilities for a broad variety of needs. The module offers an integrated approach to time billing and project management, as it is fully integrated with the high-end Flexware accounting system and seamlessly works with Flexware Job Cost, Accounts Receivable, (optional) and Accounts Payable (optional). An unlimited number of projects, each with up to four levels of control, with their own control budgets and detailed estimates can be managed. Projects track time units, labor, equipment, material and other costs. Running On Time includes sophisticated line by line billing that allows detailed invoicing control. It also includes full expenses account processing, allowing unlimited expenses to be distributed to projects. For PowerBook or off-network users, there is an optional add-on module that allows the recording of time sheet and expense account information, which can then be automatically downloaded to Running On Time.

Straight Shot Accounting
Tracks billable services and allocates expenses to clients
Macintosh IIci or larger; 3.5 MB of RAM; System 6.0.4 or later.
Straight Shot is a professional accounting package designed specifically for companies that bill professional services and allocate expenses to clients, including organizations such as architects, consultants, accountants, lawyers and advertising firms. Straight Shot has a hierarchical approach to storing and exploring data — double-clicking on any item reveals related information up to six levels deep. For example, double-clicking on a deposit reveals the invoices that make up that deposit. From a single invoice, individual charges can be displayed; from an individual charge, users can see the professional time charge (or vendor charge) from which it was allocated, etc. Straight Shot's powerful "performance analysis" provides instant feedback on the margin and profitability of individual assignments and even the profit contribution of individual employees. Straight Shot can also provide at-a-glance analysis of how thoroughly billable expenses are being allocated to clients for the company as a whole. Straight Shot includes the features of a high-end integrated accounting system: GL, AR, AP, GJ, Payroll, etc.

■ **Timekeeper XP**
Enters billable time into accounting systems
Macintosh Plus or larger; System 6.0.5 or later; 2 MB of RAM; 1 MB of free hard disk space.

PandaWare Timekeeper XP is designed to help companies enter employees' billable time into their accounting systems. Timekeeper XP simplifies the task of creating timesheets for employees and exports timesheet data to Macintosh or DOS-based PC accounting systems. It saves time and improves the accuracy of both users and the accounting department. The application is customized by The PandaWare Co. to match requirements of each company's accounting system. Timekeeper XP was originally designed for advertising agencies, but meets the needs of any company that bills clients for time spent on projects.

TimeLog
Monitors Macintosh activity
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.

TimeLog is a powerful program that continuously monitors a user's activities on the computer. After initial installation in the System folder, TimeLog automatically keeps a complete record of all application and document usage on the Macintosh. TimeLog offers complete flexibility in reporting via the following four reports: Time History Report, showing the time periods when a user worked on files; Bar Chart Report, showing percentages of time on the various files; Percent Report, showing time percentages in a numeric format; and Time Totals Report, showing the time spent on files in hours, minutes and seconds. Each of these reports can be customized. Users select the applications, documents, folders or disks they want included in the report, along with the time period of interest. The data from these reports can be printed and/or exported to a spreadsheet program for further analysis.

Timeslips III For The Mac
Time/expense tracking, professional billing and reporting system for client invoicing, project management, department charge backs and employee productivity reports
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.2 or later.

Timeslips III is a DA time and expense tracking and professional billing system for up to 3,400 clients and 250 professionals. It is designed for service professionals who bill by the hour (or flat fee), including design firms, advertising/PR agencies, lawyers, accountants and consultants. Time and expenses can also be batch entered. Timeslips III is a complete accounts receivable program with numerous professional bill formats. Custom reports include: pre-bill worksheet, transaction, client history, aged receivables and productivity management (with graphs). Timeslips III also links with compatible General Ledger programs, such as AtOnce!, Accountant, Inc., ACCPAC/Simply Accounting, Great Plains, Insight, Cash Ledger and MultiLedger, via TAL (Timeslips III Accounting Link).

■ **TimeTracker**
Time tracking
Any Macintosh; System 6.0.5 or later.

TimeTracker is an easy-to-use time tracking application that is useful to anyone who bills for time or simply wants to keep track of time events. Users press the Start button to start recording time and create a new time entry and press the Stop button to stop recording time. Each time entry can have associated notes. By entering an hourly rate, TimeTracker computes the charge associated with each time entry. At the bottom of the window, all the time entries and charges are summed into a grand total. All the information can be printed or exported to a separate file for importation into any database, such as FileMaker Pro.

Total Collections
Delinquent account collections
Macintosh Classic or larger (SE/30 or II recommended); 4 MB of RAM.

Total Collections allows businesses to do a sophisticated and complete job of delinquent account collections in-house. The program is applicable for any business that is concerned about improving their collection results, including businesses that collect for multiple clients. The purpose of Total Collections is to keep track of large amounts of creditor data, generate essentially any type of report, send any number of letters, make phone calls, calculate interest, etc. Current customers utilize their normal billing procedure and then download data into the Total Collections program at some predetermined point (e.g., accounts that are 60 days delinquent). This information can be imported to the program from any mainframe, mini or PC computer. Total Collections is powerful, easy to use and simple to customize.

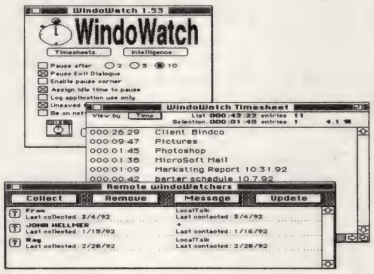
WindoWatch
Transparently tracks all window usage
Macintosh Plus or larger; System 6.0.3 or later.



WindoWatch offers precision window tracking capability, enabling users to: bill clients accurately according to time spent on a project, justify purchasing more computers or software, document (for the IRS) how the Macintosh is being used at home or improve overall productivity of a workgroup. WindoWatch keeps track of every minute spent in any program and then records this information automatically in the form of a timesheet. Users can configure WindoWatch to ignore the tracking of certain applications, files and windows. The program enables users to collect timesheet entries from users over a network and combine them into a single timesheet. Users can even send messages to other users, notifying them that they are collecting timesheets. Once installed in the System folder, WindoWatch creates a timesheet that automatically tracks all window usage — users can even keep track of paused time when the Macintosh is left idle. The program operates entirely in the background, so it will never interrupt normal use of the Macintosh.

Time Management

Agent DA
Desk accessory scheduler; personal time manager
Macintosh Plus or larger; System 6.0.5 or later.

Agent DA is a fast, powerful, yet easy-to-use desk accessory scheduler that features a simple, elegant, flexible and convenient scheduling window. With Agent DA, users get a detailed view of all postings at a glance. Its powerful integrated alarms have early reminder and snooze functions, and events may be completed or deleted directly from the reminder window. Opening multiple schedules simultaneously, even over a network, to manage or consult someone else's schedule is a snap. For to-do management, simple menu and keyboard commands allow events to be time based or not, and completed events can be checked off. Its powerful find feature, when combined to copy and paste, allows time reporting and billing. Other features include import/export, a simple, yet intelligent duplicate command for recurring events and flexible printing. It is System 7 compatible.

Alarming Events 1.1
Personal productivity, scheduling and time management
Macintosh Plus or larger; hard disk drive.

Alarming Events is a personal appointments and schedule keeper that is accessed as a desk accessory under the Apple menu. Users can select notification options for timed events. These options include a pop-up notification dialog, custom sounds, a flashing icon over the Apple menu or no notification. The pop-up notification dialog shows the entire subject and body of an event. It also allows users to deal with events directly without having to open the desk accessory. Print options allow users to print events for one day, one week, an entire month or events for all year. The events are printed in a report format showing the full subject and body, along with the day, time and duration. A reference calendar is also printed with the report. Multiple appointment books are supported, so users can have an unlimited number of appointment books on their hard drives and up to 30 appointment books can be remembered in the menu. Alarming Events lets users archive past events in two ways: archive files can be set up to store past events or past events can be kept in the appointment file for easy reference. Alarming Events supports full import/export capabilities to and from CalendarMaker or tab-delimited text files.

Ascend For Macintosh 3.0
Personal information management system
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.5 or later.

Ascend is a complete personal information management system. Users can work directly with Ascend on a Macintosh, or print out important information to take "on the road." Ascend can print on either 8.5 by 11-inch pages or on Franklin Daily Planner pages. One of Ascend's greatest strengths is in the way it integrates with the Franklin Day Planner. With the ability to print pertinent information, like tasks, appointments, calendars, values and goals, phone and address listings and more, onto Franklin Day Planner pages, valuable information is always available. Ascend comes with a dozen modules to help users become more productive with their time and better maintain key information. Modules include: Prioritized Daily Task List, Appointment Schedule, Daily Record of Events, Address and Phone, Values and Goals, Red Tabs, Master Task List, Focus, Weekly Review, Turbo File, Journal and Favorite Quotes.

■ **Calendar For Excel**
Calendar and to-do list management program within Excel
Macintosh Plus or larger.

Calendar for Excel is a Microsoft Excel macro that creates a variety of calendars and planners. The spreadsheet environment is used to quickly generate daily and weekly planners, including task lists with links to a monthly overview. Users produce professional calendars effortlessly in one month, six month and yearly formats. Calendar for Excel has the powerful features of daily and weekly planner sheets, including task lists and appointment schedules, which are linked to a monthly calendar; sort button to automatically order the task list; print button to automatically select the appropriate print area; and one month, six months and yearly calendars in a variety of formats and arrangements. The product runs on both IBM-compatible and Macintosh platforms and requires Microsoft Excel. It is system 7 compatible.

CalendarMaker 4.1
Custom calendar generator
Macintosh Classic II or larger.

CalendarMaker creates presentation-quality calendars useful for businesses, schools, clubs, churches, families and more. CalendarMaker helps track and communicate business appointments, personal commitments and special events. The program includes more than 50 pre-defined calendar layouts with one day, one week, two weeks, one month, two months or even one year on a page, with varying time increments depending on the chosen layout. Event information is typed directly on the date. Color, plus different type styles and formatting options for headers, dates, event information and floating notes, help highlight important points. CalendarMaker is fully compatible with ATM and TrueType. To add impact to calendars, clip art graphics and icons can be placed inside floating notes, events or picture frames. With the icon editor's standard paint tools — pencil, eraser, paint bucket, marquee, text tool and eye dropper — users can import, create and edit custom icons, making calendars colorful, memorable and meaningful to the occasion. CalendarMaker includes three event editors, which schedule events that recur daily, weekly or monthly. Exceptions and additions to the recurrences schedules around holidays or other events. A convenient Find feature searches through events and helps locate information quickly. CalendarMaker prints calendars in almost any size. The bigger the calendar, the more information can be shown within each time increment. A calendar can be wallet size or wall size — up to 113 by 113 inches. Calendars can be printed by the LaserWriter, ImageWriter and by color printers, or saved as Paint or PICT files for placement in page layout, presentation or word processing applications.

CalScan 3.1
Cross-platform scheduling software for Macintosh and PC users
Macintosh Classic or larger; 2.5 MB of RAM; hard disk drive; dedicated file server recommended; System 6.0.3 or later; IBM or compatible.

CalScan schedules appointments, multiday meetings and group conferences for networked Macintosh and PC users. It includes daily and weekly views for direct appointment entry and yearly views for easy navigation to any date. The Group Planner Matrix provides a graphical presentation of networked users' schedules for easy group meeting scheduling. The Overbook feature enables users to accept up to three meetings for any one time slot. Other features include: daily, weekly and monthly printouts that fit onto preperforated paper for most personal organizers; repetitive group meeting scheduling; automatic message and calendar updating; new meeting and meeting change notification; recurring event scheduling; and next available day find option for group meeting scheduling.

The Daily Planner And Calendar Publisher 3.0
Theme-based daily planner and calendar publisher
Macintosh Plus or larger; hard disk drive; System 6.0.7 or later.

The Daily Planner and Calendar Publisher is a full-featured, theme-based daily planner and calendar publisher. It includes an easy-to-use, perpetual appointment calendar, scheduling features and list and address book organization tools. Users can plan and view their schedules by day, week, month or year and can print each calendar in a variety of sizes and formats to fit popular paper-based personal organizers. Repeating events are easy to set using the powerful event editor. Events that occur on a regular basis can be created to appear in any or all of the Daily Planner and Calendar Publisher views; and audio alarms can be set to remind users days, hours or minutes before important appointments. Users can easily change and reschedule appointment information with the drag-and-drop feature. The Daily Planner and Calendar Publisher series is designed in two modules: the daily planner and calendar publisher engine module and theme pack module. Theme packs available include The Far Side Volume I, II and III; Cathy; Trivial Pursuit Genus Edition; Trivial Pursuit Sports Edition; and Random House Word-A-Day. The Daily Planner and Calendar Publisher's unique architecture allows users to add theme packs without replacing the Daily Planner and Calendar Publisher itself. Users can have more than one theme on their computer and can switch between them at any time.

DateBook Pro 4.0
Calendar organizer
Macintosh Plus or larger; System 6.0.7 or later (System 7 required for integration and Drag & Drop).

DateBook Pro is the complete calendar solution for the home, the office or the road. DateBook Pro combines calendars, scheduling, projects, To-Do lists and alarms. When users are away from their desks, it can beep them on their pager using Notify! paging system. Users can print custom and standard formats from 10 by 10 wall charts to their favorite organizer to take on the road. Users can use DateBook Pro's project view to easily outline and track the progress of grouped events and To Dos. For quick access to presentations, spreadsheets and proposals, users can attach and launch documents from the calendar. Users can view their schedule and add calendar items without launching the program. When scheduling an appointment, users simply drag and drop contacts from TouchBase Pro, Aldus' address book solution, to DateBook so that names, addresses and phone numbers are attached to their calendar. DateBook Pro keeps users organized and on time.

DateView 1.0
Calendaring and to-do list management program
Macintosh Plus or larger; System 6.0.5 or later.

Users can schedule their time with this powerful, yet easy-to-use calendaring and to-do list management program. Users can list, group and prioritize their daily calendar events and to-do items; reschedule an event by simply dragging it to a new date or time; view their calendar by day, week or month (if the view users want doesn't exist, they can create it themselves); attach automatic reminders and create repetitive events; and print their schedule in all the common formats. DateView can also be used with InTouch, Advanced Software's contact management program. In combination, users can use InTouch to schedule events that appear in the DateView calendar and use DateView to search for InTouch contacts and attach them to DateView calendar events. These products can be used by themselves or together to totally organize contacts, schedules and to-do lists. DataView also includes autodialing capabilities.
$99.95 retail

Easy Alarms 2.1
Calendar, reminder and to-do list manager
Macintosh Plus or larger; System 6.0.5 or later.

Easy Alarms will never let users forget another important meeting, task or birthday. Easy Alarms is a calendar, reminder and to-do list manager for the Macintosh. It will manage users' schedules automatically, remind them of upcoming events and keep track of all those things they need to do. Users simply tell Easy Alarms in advance what they'd like to be reminded of and when. Then, at the appropriate time, Easy Alarms alerts users with a message. Reminders can display just once or can automatically repeat every hour, day, week, month, year, etc. Users can even send reminders, including text, recorded sound, voice messages and AppleEvents scripts, to other Easy Alarms users on the network. With System 7's file sharing, users can open remote calendars across their network. Users can then view items in their calendars. System 7's read/write sharing settings allow users to have private and limited-access calendars.

Enterprise Time Capture (ETC)
Personal scheduling
Macintosh Plus or larger; 2.5 MB of RAM; System 6.0.8 or later.

Enterprise Time Capture (ETC) is an easy-to-use personal scheduling application that allows users to maintain a diary of meetings, phone calls and events, schedule collaborative meetings with other ETC users, track daily expenses and capture chargeable time automatically for billing and analysis purposes. It is designed for organizations that bill time to their clients, track time internally for accurate cost analysis purposes or project management. Based on the Butler SQL database server, ETC can be easily integrated with an organizations' current accounting system. ETC empowers users to maintain an easy-to-use desktop diary that automatically synchronizes with an enterprise-wide database. In this diary, users typically drag out a block of time and enter information pertinent to the event; information such as an event description, client ID or internal charge code, work type code and perhaps even associated expenses.

dragging. Users can instantly choose Day, Week, Month, Year, List or Directory windows with keyboard commands. Any window can be zoomed to fill the entire screen. Users can tile windows in many useful arrangements. Repeating events can be scheduled as yearly, monthly, weekly, daily or other intervals. Events can be prioritized and categorized, including color coding and filtering. Find and Find Next commands are used to search the calendar and directory. There are separate settings for the screen font and printer font. Imaja Reminder plays a sound of a user's choice when it is time for an event. Year, month, week, day or full listing views may be printed. Any view can be saved as a PICT file for use in other applications. Imaja Reminder runs under MultiFinder and System 7. Balloon Help and online documentation is included.

Meeting Maker 1.5
Precision scheduling for groups
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later.

Meeting Maker is a network application that helps users plan, schedule and confirm meetings. Users can schedule a time and date, select required guests, reserve rooms and resources and prepare agendas. Meeting Maker also has a personal calendar that allows users to block out personal activities. The Meeting Maker proxy feature allows users to give another user read and/or write access to their calendar, so they can propose meetings and schedule activities on the user's behalf. The Meeting Maker calendar can be printed in a variety of formats, including a monthly view, and can be exported to many of the popular executive organizers, such as Sharp, Casio and HP-95LX. Meeting Maker is System 7 compatible.

Meeting Maker XP
Windows and Macintosh interoperable group scheduler
Macintosh SE or larger for server (Macintosh Plus or larger for client); 2.5 MB of RAM for server (2 MB of RAM for client); System 6.0.4 or later.

Meeting Maker XP is a Windows and Macintosh interoperable group scheduling product that allows users of both platforms to plan, schedule and confirm meetings without leaving their computers. At the heart of Meeting Maker XP is the ability to seamlessly propose, coordinate and manage meetings with co-workers running on either platform over the network. The "Propose Meeting" feature allows users to schedule a time and date, select required guests, reserve conference rooms and resources, prepare agendas and send attachments. The "Auto-Pick" feature automatically finds the first available time for all required attendees. The current status of each proposed meeting can also be closely tracked. The product also includes: a personal calendar for individual appointments and activities; monthly, weekly and daily views and the ability to work from any of them; "proxy" access, which allows other people to act on a user's behalf, and the ability to view multiple colleagues' calendars at the same time; group to-dos, allowing colleagues to create to-dos (with dates) and add other users as participants; configurable reminders for meetings and activities with a snooze option; and support for a variety of printing formats (Day Runner, Filofax, Day Timers and Franklin Day Planner). XP also has a portable client and fully supports PC laptops and Macintosh PowerBooks. XP is E-mail independent and can run with any E-mail package on the market today.

Now Up-To-Date 2.1
Calendar, reminder and to-do list manager
Macintosh Plus or larger; 1 MB of RAM; System 6.0.5 or later.

Now Up-to-Date is an intelligent time management system designed for business professionals who want to organize their personal calendar and coordinate their schedule with their associates. Users can edit or view their calendar in month, week or day-view formats. The program combines a user's personal calendar events with public events shared over the network. Reminders automatically alert users prior to scheduled events. Calendars can be printed in standard organizer formats or a wall chart. It can be used for organizing a schedule, setting reminders and sharing information with others. Now Up-to-Date is System 7 compatible. It works with Now Contact to create the ultimate personal organizer.

Schedule Maker 4.0
Personnel management system
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; printer.

Schedule Maker is a personnel management system that combines an employee database with graphic-controlled scheduling to produce professional schedules. Features include: schedule on hour, half-hour or 15 minute increments; controls scheduling to prevent conflicts, such as double scheduling a worker on the same day; constant update of financial statistics on screen as a user prepares a schedule worksheet; view cost of labor as a percentage of (projected) sales or percentage of budgeted labor dollar amount; worksheet accommodates seven-day swing shift schedules; mark workers for special days off, vacations, sick leave, training skill levels or any other unique variable that would effect the scheduling period; split shifts are as easy as clicking a second drawbar and adding the new hours; prints professional looking worker schedules for posting; and export/import data for use in other Macintosh programs.

ShiftWorker
Employee scheduling system for any business that works more than one shift
Macintosh Plus or larger; hard disk drive; printer recommended.

ShiftWorker simplifies the scheduling process, allowing management to concentrate on more important aspects of a job. The system provides consistent, impartial scheduling based on seniority, preferences, availability, absences, overtime preferences, target and maximum hours. The system uses three types of data as input: employee data that provides each employee's preferences and availability, number of hours an employee can expect to work and a maximum allowed; shift definitions that describe start and stop times of each shift; and schedule requirements that define number of employees needed for each shift/day. Information for each department in an organization is stored on a hard disk and may be updated when there is a change in employees, work requirements or shift times.

Smart Alarms 7 & Multi-User Appointments 7
Personal and office scheduling systems; networkable on AppleShare
Macintosh Plus or larger; System 7.0 or later.

Smart Alarms 7 & Multi-User Appointments 7 is ideal for professional offices (medical, legal, consulting) where several calendars are needed and are currently operating on a network. Smart Alarms allows users to create reminders from the Apple menu that interrupt users at an appointed time. Users can edit the reminder, change the time for the reminder to fall due, schedule and advance warning or schedule for the reminder to recur at set intervals from minutes to years. Appointments is a daily calendar that keeps track of all appointments. Notes and time can be set from a user's calendar directly into Smart Alarms to remind a user of scheduled events. Smart Alarms & Appointments is System 7 compatible.

Smart Schedules
Corporate and professional scheduling system
Macintosh Plus or larger; 1 MB of RAM; System 7.0 or later.

Smart Schedules has been designed as a corporate and professional scheduling system to operate on Macintosh networks. Designed to allow scheduling of personnel, workgroups and facilities, Smart Schedules is based on a schedule card concept. This allows multi-diary viewing on the screen at any time to schedule meetings, appointments or activities. When scheduling a meeting, users have available a variety of time slots (user definable) and the ability to add or attach notes, or to-dos, for that meeting. Smart Schedules can quickly search for the first available time (according to the parameters set in the preferences) and schedule the meeting. An important scheduling facility is the ability of Smart Schedules to notify the attendees of the meeting and also remind them before time to attend. Simplicity is the key to operation, and by double-clicking on any function icon, users can access the Browser for that function. The Browser is the listing of those particular functions, such as reminders, to-dos, notes, etc., which can be resorted into date/detail/priority sequences. Smart Schedules also incorporates a phone/address book facility with an integrated "set appointment" and reminder function. Smart Schedules is network compatible.

TeamAgenda
Personal and group scheduler
Macintosh Plus or larger; System 6.0.4 or later.

TeamAgenda is an all-in-one time management tool that effectively organizes a user's personal schedule while, at the same time, seamlessly coordinates multiple personal schedules and company resources. TeamAgenda allows the viewing of multiple schedules in detail on one screen. Meetings and facilities can be booked very easily by quickly finding first common time available between multiple personal schedules and company resources. TeamAgenda can be connected to the Newton MessagePad to let users take their schedule with them, and synchronize again with the Macintosh when back at the office. With System 7 Pro, users can take advantage of Apple's PowerTalk electronic mail system. When answering appointment requests from those without TeamAgenda, users just drag requests from their PowerTalk mailbox to the appropriate day in their TeamAgenda schedule. TeamAgenda can also be used with AppleTalk Remote Access for remote coordination with the office. Other features include To-Do list and Reminders, creation of Domains useful for time-billing purposes, Carry Over of items, automatic highlighting of conflicts when reconnecting to the network from a PowerBook, delegate to others and more.

Things To Do!
To-do list application
Macintosh Plus or larger; System 7.0 or later.

Things To Do! is a System 7-savvy to-do list application that allows users and workgroups to keep on top of the many projects, tasks and reminders needed throughout the day. Things To Do! allows organization of to-do items and reminders in easy-to-use columnized lists with colorful icons to represent different item types, such as "Errand," "Call" or "Meeting." To-do lists can be shared with any number of co-workers. Tasks can be assigned to individuals and items categorized by project names that users set. Users can set priorities, add reminders, attach sound notes, text notes or files to any item on the list. Built-in AppleScript functionality allows users to link to-do list items with information in other AppleScript aware applications.

Time ADvisor
Automatic time keeping for System 7 users
Any Macintosh operating on System 7.

Time ADvisor is an automatic time keeping system that is an easy-to-use, comprehensive solution to help users produce their daily time sheet. With Time ADvisor, the time sheet is created as users work, eliminating the need for hand written notes or manual paper time sheets. At the end of each day, users decide when to print the computerized worksheet representing that day's (or week's) complete activities. Users can also choose to save each computerized worksheet by archiving them to a special folder on the computer. The TA system icon lives on the Macintosh menu bar and is always available at the click of a mouse button or keystroke, no matter what application is being used. Time ADvisor's easy access makes logging time fast and convenient. Users can also record materials usage such as laser prints and scans. Based on an innovative Triggering Technology, Time ADvisor prompts users at logical points in their work process. As users launch their desktop publishing or administrative programs, Time Advisor's triggers kick in, and together users and Time Advisor tabulate an accurate and detailed acount of job activity. Because Time Advisor is a system extension, elapsed time is displayed on the menu bar and the time of day for each logged entry is stamped on the time sheet. Options that users can control include: minimum billing increments, manual logging features, setting the trigger function, passwords for restricted access to options and much more. It uses System 7 technology to master list of jobs, tasks and resources available to anyone on the network. The data sharing feature is accomplished without increasing memory, without upgrading the Time ADvisor software and without increasing the costs. Time ADvisor data is completely open and accessible to any spreadsheet, database or word processing application.

Under The Sun 2000
CD-ROM-based calendar enhanced with QuickTime video
Macintosh LC or larger; 4 MB of RAM; 8-bit color monitor; System 7.0 or later; double-speed CD-ROM drive.

Combining the sensory aspects of video and the physical properties of paper, this product brings the calendar form into the 21st Century. Under the Sun is the first CD-ROM-based calendar enhanced with QuickTime video. The unique footage features sports-oriented segments, enabling users to momentarily escape the routine of the day with a click of the mouse. Video content consists of parasailing in France, extreme skiing in Colorado, snowboarding in Oregon, sea kayaking in Alaska and other action-filled vignettes. The calendar functionality permits users to schedule appointments on a daily basis with the added benefit of providing a month-at-a-glance view on the computer screen. It can also make available a printout of a user's schedule on a daily or weekly basis to accommodate travel.

What Are You Doing Today, Charlie Brown?
Time management
Macintosh Plus or larger; hard disk drive; color display recommended; System 6.0 or later.

Now users can enjoy the Peanuts Gang in color every day of the year. Their inspiring humor can help users plan and organize all their busy activities for years to come. Users choose their favorite activity icon to track and view family, group, club or individual events. It's so easy to use, the whole family will want to print their own personal activity schedules. The program offers users serious daily planning, plus stunning color cartoons everyday, cartoon printouts to go or Snoopy dancing on call. Users will never forget anything when they use the handy To Do list with automatic carryover for unfinished items. And Snoopy's universally recognized "Supper Time" dance will hilariously remind users of all their alarmed events.

■ **Calibrating Monitor And Imagesetter**
Computer training video
VCR.

Calibrating Monitor and Imagesetter is a step-by-step, non-complicated guide to assuring that what users see on their monitor is what they get in the final printed piece. Instructions on monitor calibration are step by step and easy to follow with clear illustrations and techniques anyone can put into practice immediately. Whether the imagesetter is onsite or elsewhere, users can help assure that it is properly calibrated and actually understand how it's done. Discussions include transfer curves, transfer functions, different calibration systems and techniques that work in both color and gray scale.

■ **Color Separation**
Computer training video
VCR.

Color Separation is designed to help users get commercial-quality color separations from a Macintosh desktop system. Users will learn what UCR and GCR are, how they impact printed files and how to properly prepare electronic files to get the full benefits of each. Separation file types are discussed with illustrations and demonstrations of how to use the separation features of Adobe Photoshop, Aldus PrePrint, QuarkXPress and Aldus PageMaker. Discussions include pre- and post-scan sharpening, duotones and resizing for maximum quality and performance.

■ **How To Use PageMaker 5, Parts I And II**
Self-paced training
Any Macintosh; PageMaker 5; standard audiocassette player.
How to Use PageMaker 5, Parts I and II is an audiocassette-based interactive course that teaches the features of PageMaker 5 in an easy-to-understand format. The only equipment needed, besides a Macintosh system running PageMaker 5, is a standard audiocassette player. Learners are introduced to the basic features of PageMaker 5, as well as those of desktop publishing itself. Learners create documents, change fonts and sizes and use special effects. Hands-on practice is provided. The FlipTrack format allows optional branching tailored to fit individual needs.

■ **Scanning For Results**
Computer training video
VCR.
This course is designed to help viewers produce color, gray scale and line art scans on their desktop system that rival those done traditionally. Instruction and illustration are provided for dealing with gamma, midtone placement, sharpening, resolution, dynamic range and more. Additional discussions will include scanner types and their uses, how scanners work and why resolution does not mean quality and image compression. Software for demonstration purposes is Adobe Photoshop, Aldus PageMaker and QuarkXPress.
$89 retail
$19 retail; rental
CareerTapes Enterprises; Richardson Shores; Box 309; Center Harbor, NH 03226; 603-253-7470

■ **Stripping And Imposition**
Computer training video
VCR.
This course is designed to teach desktop users what is needed to prepare electronic files that will minimize the need for "hands-on" stripping time, while helping the traditional litho tradesman understand what to expect from the desktop client. Discussions include printing press operation, stripping layouts, masks, folding dummies and basic assembly of a four-color print job. The page imposition section deals with the whys and hows of preparing desktop files in both simple and complicated page impositions. Techniques for QuarkXPress, PageMaker and commercial imposition software are discussed and illustrated.

Utilities/Backup Programs

BRU Pro 3.21
Backup/restore utility
Macintosh Plus or larger; hard disk drive.
BRU Pro is a backup and restore utility that copies, backs up and restores all HFS/MFS volumes, including SCSI drives, cartridges, floppies and network volumes. Features include: tape support for Apple Tape 40, Tandberg 150 and many others; optional data compression with visual illustration; ideal for backing up a hard disk to SyQuest cartridge drives (supports both 45 and 88 MB sizes); new file selection dialog; incremental backups, even in a Tops environment; adds "Backup To" and Restore To" commands to the File menu (selected files may be backed up or restored to a specific folder on a specific volume); background backup and restore; allows users to specify when to execute a backup or restore; shows modified and backed up times (if any) for each file; and can specify automatic replacement of existing files in a backup.
$59 retail

Macintosh Plus or larger.
Cat•Back is a comprehensive and personal, as well as network backup program. A demo disk is available upon request.
$129 retail
Enterprise Software; 12943 Andy Dr.; Cerritos, CA 90701; 310-809-7184

DiskFit Direct
Essential personal backup
Macintosh Plus or larger; 2 MB of RAM(4 MB for recommended for System 7.0 or later); System 6.0 or later; hard disk drive.
DiskFit Direct provides the basic backup essential to every Macintosh user. Users simply launch DiskFit

Direct, click Backup and insert the backup disks as requested. The end result is an exact copy of the hard disk on an organized SmartSet of floppy disks or other removable media, including Bernoulli and SyQuest cartridge drives, opticals and Flopticals. Subsequent backups are incremental, copying only the files that are new or changed since the last backup. This ensures compact SmartSets and the fastest possible operation. Best of all, users don't have to add more disks every time they back up. Backup files are stored in Finder format, keeping files easily accessible and retrieval simple. DiskFit Direct secures data against file corruption, virus, accidental deletion and hard disk crashes.
$49.95 retail
Dantz Development Corp.; 4 Orinda Way, Bldg. C; Orinda, CA 94563; 510-253-3000 or 510-253-9099 (fax)

DiskFit Pro
Fast and efficient backup
Macintosh Plus or larger; 2 MB of RAM (4 MB of RAM recommended for System 7.0 or later); System 6.0 or later; hard disk drive.

DiskFit Pro is fast and efficient backup for the Macintosh. Just a few simple steps will secure data against file corruption, accidental deletion and hard disk failure. "SmartSets" store files in Finder-readable format, allowing retrieval of files directly from the backup at anytime, even without the DiskFit Pro application. Under System 7, a folder containing aliases to the SmartSet can be put on the desktop, allowing direct access to the backup by simply double clicking on a file's alias. Incremental backup replaces only the new or changed files in the backup set, keeping the SmartSet compact and ensuring fastest possible operation. DiskFit Pro includes timed duplicates and smart duplicates from one volume to another, as well as the ability to backup AppleShare servers locally and over the network. DiskFit Pro is optimized for use with Finder-mountable media, including both 800K and 1.44 MB floppies, SyQuest, Bernoulli and optical disks.
$125 retail
Dantz Development Corp.; 4 Orinda Way, Bldg. C; Orinda, CA 94563; 510-253-3000 or 510-253-9099 (fax)

DiskTwin 2.0
Disk duplexing system
Macintosh SE/30 or II family.
DiskTwin is a hardware/software product that offers continuous, real-time backup for Macintosh computers. Whenever a Macintosh saves data to disk, DiskTwin simultaneously saves to a twin disk. In the event of a disk crash, DiskTwin automatically cuts over and continues operation on the backup drive. DiskTwin is ideal for AppleShare file servers and mail servers because it runs transparently, without degrading performance, while the server is running. DiskTwin is available for either Macintosh SE/30 or II computers. To use DiskTwin, users designate one of their SCSI disks as the primary drive and another as its twin. The primary drive is attached to the Macintosh in the normal way, and the twin is connected to the DiskTwin's port. PartitionTwin, a software product for the DiskTwin board, allows users to twin from selected partitions on the primary disk. This allows users to only invest in a smaller twin drive.
$999 retail
Golden Triangle Computers, Inc.; 11175 Flintkote Ave.; San Diego, CA 92121; 619-587-0110 or 619-587-0303 (fax)

Drag 'n Back 1.5
Backup program
Macintosh Plus or larger; System 7.0 or later.

Drag 'n Back is the first drag and drop program. It is very intuitive to use. Users back up what they "drag and drop" directly from the desktop.
$49 retail
Enterprise Software; 12943 Andy Dr.; Cerritos, CA 90701; 310-809-7184

ExpressMirror
Disk mirroring/disk array software
Macintosh Plus or larger.

ExpressMirror is full-featured disk mirroring/disk array software for Macintosh and Quadra systems. This stand-alone software package provides fault tolerance through disk mirroring. Additionally, performance is improved through a feature capability called "read costing." This allows a mirrored disk system to outperform a conventional disk while still providing data security. ExpressMirror ensures the integrity of disk systems by continuously duplicating every write operation on up to four additional hard drives. The invisible secondary drives act as online backup to provide users with their most current information. ExpressMirror is ideal for file servers and high-end applications where online data integrity is critical. If the primary drive fails, the secondary will automatically engage to insure that no interruption of data storage or retrieval occurs.

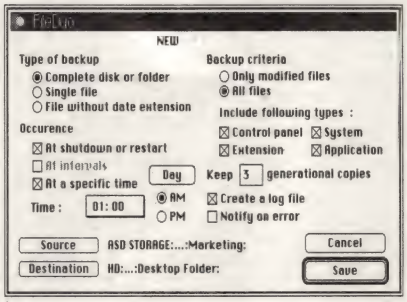
FileDuo
Automatic personal backup utility
Macintosh Plus or larger; System 6.0.4 or later.



FileDuo is an automatic personal backup utility that performs unattended backups to any mountable volume (hard disk, server, etc.). Unlike other complicated backup programs, a FileDuo backup file needs no restoration — it is an exact duplicate of the original file. FileDuo waits in the background for each scheduled backup then performs an incredibly fast backup. Setting up an unattended backup is easy. Users select a specific time each day, at shutdown or every five minutes. Users can back up one file, several folders or a whole hard disk to any HFS storage device. FileDuo can even create "Generational Copies," which saves several versions of a document that cover a period of time. This enables users to retrieve an older version of a document should undesirable changes be made. By selecting "Only Modified Files," FileDuo will back up only the files that have been modified since the last backup.

HFS Backup 3.5.9
Archive and restore utility
Macintosh 512K or larger; hard disk drive.

HFS Backup is an enhanced version of PCPC's archive and restore utility. It allows users to back up to floppies, tape drives or to any mounted volume visible on the desktop, including hard disks. Users may choose to backup and restore an entire hard disk, selected files or changes made since the last backup. HFS Backup features include a file "filter" that allows files to be included or excluded from the backup based on file classification, name, date last modified and type; style inclusive backup procedures that allow both incremental or overwrite backups; the ability to print or save a list of files and folders; macros to save a backup session for frequent backups; and virus detection that will alert a user to any suspected files.
$99 retail
Personal Computer Peripherals Corp. (PCPC); 1956 Whitney Way; Clearwater, FL 34620; 813-530-0123, 800-622-2888 (sales) or 813-532-6741 (fax)

Inline Sync
PowerBook Synchronizer
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 7.0 or later.

A full-featured PowerBook sychronizing application, Inline Sync updates vital files between PowerBooks, desktop Macs and hard drives, no matter where the files are stored. It synchronizes automatically or on command. Users can use browse interface to select any file or folder, or script selections by name, folder, type and date. For safety, Inline Sync alerts users to identical files that have both been modified. It works through file sharing, a network, SCSI port or floppy disk.

Late Night Attendant
Unattended automatic backup utility
Macintosh Plus or larger; System 7.0 or later.

Late Night Attendant automates the file backup process. Backups are scheduled to run at specific times, either daily, weekly or monthly. Late Night will backup files to any Macintosh file system and is especially effective when used in conjunction with large file servers, read/write optical disks, removable cartridges or flopticals. When used with networked file servers, Late Night will automatically mount and unmount the file server to and from the desktop as needed. Late Night can also backup file servers while online. A copy of Late Night is installed on each user's Macintosh. A user configures Late Night to their own specific backup needs. Late Night is capable of shutting down the Macintosh upon completion of a backup and supports both single copy and archive modes.
$49 retail; volume discounts are available
Broad Ripple Systems, Inc.; 2902 N. Meridian St.; Indianapolis, IN 46208 or 317-924-4271 (fax)

NetStream 2.2
Network backup
Macintosh 512KE or larger.

NetStream is designed to make the chore of network backup automatic. It allows users to "set and forget" network backup schedules, permitting unattended operation. Unattended network backups can be scheduled days, weeks and months in advance. Features include virus checking, individual data security, back up across multiple zones, back up and restore AppleShare privileges, back up server live, selectable DES or proprietary encryption and compatibility with AppleShare, Tops and MultiFinder. NetStream software supports most popular tape drives, as well as removable media.

$299 retail; administrator pack
Personal Computer Peripherals Corp. (PCPC); 1956 Whitney Way; Clearwater, FL 34620; 813-530-0123, 800-622-2888 (sales) or 813-532-6741 (fax)

QTBackup 3.03
Backup software
Macintosh Plus or larger; 2 MB of RAM; System 6.0.2 or later.

QTBackup is backup software designed to take full advantage of the power of System 7. To backup files to a Tecmar tape system, users simply select and drag a disk, folder or file icon onto the QTBackup application icon. The software automatically backs up all of those items using the default preference settings, making backup operations as simple as copying files has always been on the Macintosh. Users can specify search settings based on a file's name, data type or label under System 7's Find menu. QTBackup allows backup of AppleShare volumes while the server is online, and restores are still performed while the server is offline or from a workstation. Additional enhancements to support System 7 capabilities include: support for tagging files by color and labels; easy selection of default session names and comments; enhanced printing functions for listing contents off backup media; a diagnostic function that displays configuration in log file; and an improved Quickmenu interface. Tecmar is currently bundling QTBackup with QTShare to allow a central workstation to perform peer-to-peer backup of files on all other workstations on an AppleTalk network without server intervention.

Tecmar, Inc.; 6225 Cochran Rd.; Solon, OH 44139; 216-349-0600, 800-624-8560, 800-422-2587 or 216-349-0851 (fax)

Redux Deluxe 2.5
Backup utility
Macintosh Plus or larger; 1 MB of RAM; System 6.0.5 or later.

Redux Deluxe backs up files painlessly and quickly so that users can work without worrying about the health and well-being of data on their hard disk. Stuffit SpaceSaver by Aladdin Systems, Inc. ships free with every purchase.
$79.95 retail
Inline Software; 308 Main St.; Lakeville, CT 06039; 203-435-4995, 800-453-7671 or 203-435-1091 (fax)

Retrospect
Powerful backup software
Macintosh Plus or larger; 2 MB of RAM (4 MB of RAM recommended for System 7.0 or later); external disk drive or hard disk drive; System 6.0 or later.

For users whose backup requirements exceed the limits of floppy or removable hard disk backup, Retrospect provides a powerful backup and storage management solution. If a hard disk crashes, Retrospect can restore it to its pre-disaster state and get users back up to speed in minutes. Now with a new friendly interface, Retrospect provides both incremental backup to protect daily work and true archiving to liberate valuable disk space by removing inactive files from a hard disk to a storage device. Users can create backup scripts with multiple sources, destinations, file selection criteria and schedules with ease. They can then use calendar launch to provide automatic and unattended backup to any tape, optical or cartridge drive. Retrospect supports almost every storage media used with the Macintosh. Password protection, data encryption and compression options are provided. Network support can be added by purchasing Remote 10- or Remote 50-Packs. It is System 6 and 7 compatible.
$249 retail
Dantz Development Corp.; 4 Orinda Way, Bldg. C; Orinda, CA 94563; 510-253-3000 or 510-253-9099 (fax)

Retrospect A/UX
Powerful A/UX backup software
Macintosh running A/UX 3.0.1.

Retrospect A/UX allows users to back up both A/UX and Macintosh files easily without any special knowledge of A/UX or storage devices. Because Retrospect runs under the A/UX Macintosh environment, data is backed up and restored using the A/UX operating system's built-in translation features. In addition, all of the extra A/UX information for each file and directory is backed up with each file. This "dual personality" provides complete backups and data interchange capability between A/UX and Macintosh environments. All of Retrospect's standard features are available in Retrospect A/UX, including scripting, data compression and unattended operation. In addition, Retrospect A/UX backups include A/UX special files, symbolic links, hard links, modes, file formats, resource and data forks, Finder information, file-level privileges and four separate privilege name spaces. It does not support the backup of data stored on raw devices or unmounted volumes.
$200 upgrade from Retrospect 2.0 or Retrospect Remote 2.0
Dantz Development Corp.; 4 Orinda Way, Bldg. C; Orinda, CA 94563; 510-253-3000 or 510-253-9099 (fax)

Retrospect Remote
Network backup software
Macintosh Plus or larger; 2 MB of RAM (4 MB for System 7.0 or later); System 6.0.5 or later; AppleTalk network.

Retrospect Remote provides centralized, unattended workgroup backup for any AppleTalk network. Network administrators just install Retrospect Remote and a storage device on any one Macintosh and a Remote INIT on the rest. Using a scheduling calendar, users can create any number of scripts to customize their backups. Retrospect Remote will go from Macintosh to Macintosh, performing an incremental backup automatically. It can even defer a user's shut down command until the backup is done. Restores can also be done over the network. Password protection and data encryption provide security. The program supports all tape, optical and cartridge drives. Each Retrospect Remote package backs up 10 remote Macintoshes; users can add more with Remote 10-Packs or 50-Packs, available separately.

ShuttlePilot
File synchronizer
Macintosh Plus or larger; System 6.0.7 or later.

ShuttlePilot is a file synchronizer that works by allowing users to designate a list of folder pairs that they want to be equalized. Based on this list, ShuttlePilot will copy and replace files within these folders until their contents are equivalent. It was designed for users with two or more Macintosh computers and multiple copies of files that change daily. It can also be used as a simple backup program.

Xanatech, Inc.; 61 Oriole Crescent, Ste. 1; Singapore 1128; (65) 2244073 or (65) 2238324 (fax)

SnapBack
Workgroup backup
Macintosh Plus or larger; 2 MB of RAM; System 6.0.4 or later.

SnapBack is a workgroup backup product that lets users on any type of Macintosh network back up automatically to a shared disk. A central disk is used to store users' backups. Users select their own backup criteria by marking files and folders on the Macintosh backup. Users then designate their backup schedule. Backup is performed automatically with no additional effort by the user. SnapBack's most unique feature is that backups can be brought directly to the user's desktop, offering immediate access without requiring the assistance of a network administrator. When users want access to their backups, they can mount them, much like AppleShare volumes, and find the files they need from the Macintosh desktop. The backup disk's desktop is an exact duplicate of the user's disk, so finding files is simple. Backup files can be simply dragged back to the user's hard disk, and users can password protect their backups to prevent unauthorized access.
$129 retail; starter pack (three users and server)

SurfGuard
Archival utility
Macintosh Plus or larger; 1 MB of RAM; System 6.0.5 or later.

SurfGuard is a high-performance utility that offers users the ability to backup data to several destinations. It supports a broad line of tape devices, from QIC DC2000, DC600 and DC6000 type cartridges to helical scan devices, such as DAT and 8mm video tape subsystems. Apple HFS volumes, such as hard disk drives, magneto optical disk and networked volumes are also supported as backup destinations. The simplistic user interface eliminates confusion while performing a backup job. SurfGuard is 32-bit clean and supports System 7, System 7.1 and WorldScript, AppleShare and Novell NetWare. The speed of data transfer makes quick work of backups with high-performance 8mm and DAT drives. Additional features include quick file access, scheduled backups, incremental backup, automatic system shutdown, file by file and mirror image backup and DAT stacker support.
$150 retail
Surf City Software; 1095 N. Main St., #M1; Orange, CA 92667; 714-289-8543 or 714-289-1002 (fax)

■ **Synchronize! Pro**
Mirroring and backup of file servers
Macintosh Plus or larger; System 7.0 or later; MAE (Macintosh Applications Environment).

Synchronize! Pro provides mirroring and backup of AppleShare-compatible file severs, including user and group names and privileges. Synchronize! Pro can automatically connect to a local or remote file server over a network or, using AppleTalk Remote Access, synchronize or backup files and folders, save all privilege information and log off at any preset time, once or repeatedly. Users can enter all passwords in advance, so the synchronization or backup can be done anytime day or night. An activity log records the date, time and results and the files copied.
$99.95 retail
Qdea; 6331 Hilton Ct.; Pine Springs, MN 55115; 612-779-0955, 800-933-9558 or 612-397-8590 (fax)

TwinIt
Personal continuous backup
Macintosh Plus or larger.

TwinIt is a personal continuous backup. For the price of TwinIt and a second disk, users can maintain a continuous backup that is created automatically, as users work. Users can't forget to back up, because TwinIt does it for them. TwinIt employs a technology called universal disk mirroring to create continuous backups. It is unique because it doesn't require the use of a particular manufacturer's disks or disk software. Users can use TwinIt with their existing disk — no reformatting or driver installation is required. TwinIt is ideal for compact machines because no hardware is required. It works with all SCSI disks. TwinIt is AppleShare transparent. It maintains all AppleShare privileges and works while AppleShare is running. TwinIt is also System 7 compliant.
$199 retail

Utilities/Hard Disk Utilities

1-Anubis
Formatter/driver/utility
Macintosh Plus or larger.

Anubis is a formatter/driver software utility that supports virtually 99 percent of the Winchester drives on the market with fast drivers for optimum speed throughput. Anubis has full support of Apple's SCSI Manager 4.3, and also includes full support for Power Macintosh line of computers It also supports Sony (600 and 650 MB), Ricoh (600 MB), Maxoptix Tahiti I, II and III (600 MB and 1 GB), Most (130 MB 3.5 inch) and more. The Anubis Software License, for OEMs, allows licensees to put their name and logo in the software to sell with a house brand of drives.
$129.95 retail
CharisMac Engineering, Inc.; 66 "D" P&S Ln.; Newcastle, CA 95658; 916-885-4420, 800-487-4420 or 916-885-1410 (fax)

Alki Seek
Fast file retrieval utility
Macintosh Plus or larger; System 6.0.2 or later.

Alki Seek allows users to construct file and application searches using a variety of user-selected criteria. Seek can search a hard drive, or a network, using file content, location, creation or modification date, file or application type, file size or attributes. Users of Microsoft Word can search for documents using Word's Summary Information. Seek's "Banter box" provides plain-language descriptions of criteria as they're selected. Search criteria can be saved as "presets" for future reuse. Seek also incorporates GREP (or pattern matching) in a simplified form. Once a file is found and listed in Seek's Results window, it can be opened with a click on the Open button. Contents of the folder containing the file can be displayed. The Results window lists each file's size, data, type, creator, attributes and Finder comments. Seek can be used instantly upon installation.
$39.95 retail
Alki Software Corp.; 300 Queen Anne Ave. N, Ste. 410; Seattle, WA 98109; 206-286-2600, 800-669-9673 or 206-286-2785 (fax)

Anubis Multifunction Utility
Formats and supports WORM and multifunction optical drives
Macintosh Plus or larger.

These Products Available Through Bottom Line Distribution
1-800-347-1923

The Anubis Multifunction Utility software features the versatility to format and support both WORM and multifunction optical drives for the Macintosh. It features compatibility with 1,024 and 512 b/sec optical media for the most comprehensive optical support.
$199 retail; OEM licensing available
CharisMac Engineering, Inc.; 66 "D" P&S Ln.; Newcastle, CA 95658; 916-885-4420, 800-487-4420 or 916-885-1410 (fax)

Anubis Optical Jukebox Utility
SCSI optical jukebox utility software
Macintosh SE or larger.
Anubis Library Manager is high-performance SCSI optical jukebox utility software that features the versatility to format and support from 5 GB personal edition to 57 GB professional edition jukeboxes. It features compatibility with 1,024 and 512 KB/sec for the most comprehensive optical support. The Anubis Library Manager takes advantage of CharisMac engineering's revolutionary new turbo disk management scheme. Turbo speeds up writes to optical disks by as much as two times their normal speed. The Anubis Jukebox software includes and instruction manual to aid in installation and operation. Anubis supports SCSI Manager 4.3 and is fully Power Macintosh compatible.
$799 retail
CharisMac Engineering, Inc.; 66 "D" P&S Ln.; Newcastle, CA 95658; 916-885-4420, 800-487-4420 or 916-885-1410 (fax)

Anubis Professional Storage Suite
High-powered SCSI utility
Any Macintosh; 2 MB of RAM.
The Anubis Professional Storage Suite is the most comprehensive, high-powered SCSI Utility for the Macintosh. Anubis Professional is a formatter/driver/utility software that supports all fixed disks and removable drives on the market. The Anubis Professional includes support for RAID levels 0 and 1, performing basic mirroring, striping and spanning across hard drives in a disk array. Annubis Professional also includes Turbo MO, the revolutionary new disk management scheme that speeds up writes to optical disks by twice their normal speed. Anubis Professional supports SCSI accelerator cards from various manufacturers, and fully supports the new Power Macintosh line of computers.
$199.95 retail
CharisMac Engineering, Inc.; 66 "D" P&S Ln.; Newcastle, CA 95658; 916-885-4420, 800-487-4420 or 916-885-1410 (fax)

Anubis WORM Time Stamp Manager
Formats and supports WORM and multifunction optical drives
Macintosh Plus or larger.
The Anubis WORM Time Stamp Manager software features the versatility to format and support WORM-only and multifunction optical drives for the Macintosh. It allows users to "warp back in time" for the most flexible form of data archival available. Time stamps are written when data is written to the disk and users are able to remount the previous Time Stamps (directories).
$199 retail; OEM licensing available
CharisMac Engineering, Inc.; 66 "D" P&S Ln.; Newcastle, CA 95658; 916-885-4420, 800-487-4420 or 916-885-1410 (fax)

CD AllCache
Allows users to increase the speed that CD-ROM players operate
Macintosh Plus or larger.
CD AllCache software features the versatility to support virtually all CD-ROM mechanisms compatible with the Macintosh. The software allows users to greatly increase the speed their CD-ROM player operates by caching directory information to the Macintosh. The performance can increase all CD-ROM directory inquiries and the high-speed universal CD driver greatly speeds the data I/O. CD AllCache features pre-set cache buttons optimized for maximum speed for many of a user's favorite CD titles and CD-ROM manufacturers. It also comes complete with a user's choice of four different audio desk accessories for audio CDs. It is Photo CD multisession compatible.
$79 retail; OEM licensing available
CharisMac Engineering, Inc.; 66 "D" P&S Ln.; Newcastle, CA 95658; 916-885-4420, 800-487-4420 or 916-885-1410 (fax)

Disk Café
SCSI drive utility
Macintosh Plus or larger; 1 MB of RAM; System 6.0.7 or later.
Disk Café is an ensemble of Macintosh SCSI drive utilities to standardize, control and enhance performance of hard disk drives and removable disk drives. It enables users to install, format, mount and read from/write to the disk of their choice. Disk Café includes: an easy-to-use control panel device, system device and SCSI driver; a powerful formatting utility to prepare and maintain disks; and a highly-advanced utility with diagnostic tools to test and change disk drive settings, including repairs of defective drives.
$59 retail
Bering Technology, Inc.; 1357 Dell Ave.; Campbell, CA 95008; 408-364-2233, 800-237-4641 or 408-374-8309 (fax)

Disk Manager Mac 3.0
Disk installation utility
Macintosh Plus or larger including Power Macintosh; hard disk drive.
Disk Manager Mac easily installs and completely prepares virtually any SCSI device or read/write optical/floptical drive in a Macintosh computer. With a click of the mouse, this comprehensive utility will low-level format and initialize automatically or provide the option of custom drive installation. Disk Manager Mac comes complete with a collection of data protection and maintenance utilities, including defect management features, mount options, password protection and more. Save time and protect valuable data with the added options provided in Ontrack's Disk Manager Mac software. Hardware installation kits also available. Includes Power Mac and SCSI Manager 4.3 support.
$69.95 retail
Ontrack Computer Systems, Inc.; 6321 Bury Dr., Ste. 15-21; Eden Prairie, MN 55346; 612-937-1107, 800-752-1333 or 612-937-5815 (fax)

DiskExpress II
Disk optimizer utility
Macintosh Plus or larger; System 6.0 or later.
DiskExpress II is a hard disk optimizer. It automatically starts to defragment and optimize hard drives whenever the computer is idle or whenever a user requests it. Because it's fully transparent, DiskExpress II intuitively works around busy schedules in the background mode without tying up the computer. The program constantly logs all file activity to determine the optimum priority for file placement on each particular hard disk. It uses this priority to group frequently used files together for maximum hard disk performance. DiskExpress II uses safe Disk Optimatic technology, which means it automatically optimizes one file at a time. This way, it can be interrupted at any time with no risk of scrambling any information on the hard drive and requires virtually no free space to work. DiskExpress II is System 7 compatible.
$89.95 retail
Alsoft, Inc.; PO Box 927; Spring, TX 77383; 713-353-4090 or 713-353-9868 (fax)

DiskMaker
Universal SCSI disk formatter/manager
Macintosh Plus or larger.
DiskMaker is a high-performance formatter/manager that works with all SCSI disks. It eliminates disk software inconsistency and allows users to buy disks from any source. DiskMaker is fully System 7 compatible and supports 32-bit addressing and virtual memory. Installation is as easy as clicking a single button. Removable media can be ejected and inserted like floppies, and DiskMaker allows users to partition their disk into multiple volumes for better performance and security. Password protection, including a Master Password option, is also featured.
$89 retail
Golden Triangle Computers, Inc.; 11175 Flintkote Ave.; San Diego, CA 92121; 619-587-0110 or 619-587-0303 (fax)

DiskQuick
Catalogs hard drives and floppies
Macintosh 512K or larger.
DiskQuick provides a user with a way of assembling a catalog that accurately describes the contents of each of his disks. The program catalogs both floppy and hard drives and makes subset lists from a user's catalogs. It includes an option to show information-box material; the ability to choose fonts for display or printing; the ability to type a single letter for instant scrolling; marks documents that need backup; and marks superseded documents. Additional features include: cancel processing of an HFS disk by typing Command-Period; find-again feature speeds searching, especially in a list that is non-alphabetically sorted; print any saved catalog directly from desktop; warning alerts user in the event that memory is nearly used up; and more.
$49.95 retail; not copy protected
Ideaform Inc.; PO Box 1540; Fairfield, IA 52556; 515-472-7256

Drive7
Universal drive management utility
Macintosh Plus or larger; System 6.0 or later.
Drive7 is a drive management utility for fixed and removable drives. It increases speed and performance, and helps maintain the reliability of virtually any drive. It is perfect for owners of multiple drives because one piece of software may be used for all their storage devices. Users who are upgrading to System 7, or who have found their drive manufacturer no longer in business, have full support for their orphaned drives. Included is Mount Cache, a CDEV that ends problems mounting removable media. Multiple driver extensions can be removed from the System Folder because Drive7rem supports virtually all removables, including SyQuest, Bernoulli and magneto-optical drives.
$89.95 retail; site licenses start at 10 Macintoshes
Casa Blanca Works, Inc.; 148 Bon Air Center; Greenbrae, CA 94904; 415-461-2227 or 415-461-2249 (fax)

DriveShare
Simplified sharing of removable devices over a network
Macintosh Plus or larger; System 6.0 or later.
DriveShare simplifies the sharing and speeds up the data transfer of removable devices over a network. It does not require System 7 or File Sharing and allows cartridges to be ejected and changed anytime. There is no need to turn off File Sharing and remove a Macintosh from the network to remove or change a cartridge. DriveShare works with SyQuest, Bernoulli, magneto-optical drives. There are no users, groups or passwords to set up. Users simply drop the DriveShare CDEV into the System Folder of the Macintosh computers on the network and restart. When users insert a removable cartridge at a Macintosh, the DriveShare Query box asks where to mount the cartridge on the desktop, or any users listed on the network. Users click on the user's name and they're done. The cartridge will mount on the user's desktop and can be used just as if it were connected directly to their own Macintosh.

eDisk
Hard disk performance enhancement
Macintosh Plus or larger; hard disk drive; System 6.0.5 or later.
eDisk is driver-level compression software. Rather than compressing files, it expands the entire hard disk. eDisk makes hard drives or partitions appear to the Macintosh file system and all of a user's applications as a hard disk with two, three or four times its normal capacity, depending on the type of data files that they are using and their own personal preference. Users install eDisk once to permanently expand hard disk capacity. After installation, users use their double-capacity drive as they normally would. eDisk works with the existing driver, so users will still enjoy the benefits of a driver that was designed to deliver optimum performance on the drive that they currently use. Because eDisk operates at the driver level, there is no wait for "stuffing and unstuffing" files.

Alysis Software Corp.; 1331 Columbus Ave., 3rd Fl.; San Francisco, CA 94133; 415-928-2895, 800-825-9747 or 415-928-2896 (fax)

FindAll
Allows users to instantly find the files they need
Macintosh Plus or larger; System 7.0 or later.

FindAll is a powerful Find utility for System 7. Users can search their entire Macintosh in seconds and list all found files in one window. Users can find and list groups of files instantly; launch anything, anytime from one window; audit the contents of any machine; see and remove duplicates for more disk space; and eliminate time wasting "window clutter." FindAll lets users define their own search criteria and add them to its menu. For example, users could define a menu item "Word Docs," which instantly finds and lists all Word documents. And FindAll is incredibly fast (approximately 2 seconds to scan a 120 MB hard drive), so users get everything they need in one convenient window, instantly. FindAll is indispensable because it saves users time finding files and launching them. Plus, users can print the list and use FindAll to audit the contents of their system. For example, users could instantly find and print a list of all the programs they have on the Macintosh.

FormatterOne
SCSI Driver and utility
Macintosh Plus or larger; 1 MB of RAM.

FormatterOne SCSI driver and utility software allows users to install, format and partition hard drives and other storage devices on the Macintosh desktop. All of this can be done using just one screen and Software Architect's unique "cursor sensitive" help box that quickly guides users through each step. Features include: unique "multipartitioning" graphic interface feature allows users to divide a hard drive, a SyQuest drive or each side of a magneto-optical disk into two or more volumes that appear as individually named volumes on the Macintosh desktop; partitions can be changed as often as desired (give each user or department its own volume, reduce file fragmentation and increase the efficiency of disk space); runs under MultiFinder (format and install the driver on more than one hard drive without rebooting the system); compatible with AppleShare 1.1 and 2.0 (create separate volumes for each department or person on the network); start up the Macintosh from the hard drive; special "Test" feature identifies different types of data errors and reassigns bad blocks; supports most models of SCSI hard drives; and supports up to six SCSI devices at once. Versions are available for hard drives, SyQuest and magneto optical drives. It supports SCSI Manager 4.3 asynchronous transfer.

Software Architects, Inc.; 19102 N. Creek Pkwy., Ste. 101; Bothell, WA 98011; 206-487-0122 or 206-487-0467 (fax)

FormatterTwo
SCSI drive and utility software
Macintosh Plus or larger; 1 MB of RAM.

FormatterTwo SCSI driver and utility software allows users to install disk drives on the Macintosh "desktop," format each drive in both the Macintosh and A/UX operating environment and partition each drive into any number of desired volumes. All of this is done using just one screen and Software Architect's unique "cursor sensitive" help display that quickly guides users through each step. Features include: unique "multipartitioning" graphic interface feature allows users to divide each side of a hard drive into two or more volumes that appear as individually named volumes on the Macintosh desktop; partitions can be changed as often as desired in either environment; supports A/UX 2.0; runs under MultiFinder; compatible with AppleShare 1.1 and 2.0; boot the Macintosh from a hard drive; unmounts media by dragging drive icon into the trashcan; second utility disk contains drive geometry scripts for automatic A/UX configuration for any supported drive; and supports up to six SCSI devices at once. Hard drive, SyQuest and magneto optical versions are available.

Hard Disk ToolKit 1.6
Hard disk formatter software/SCSI utility software
Macintosh Plus or larger; SCSI hard disk drive.

Hard Disk ToolKit replaces a hard disk's original installer with a powerful SCSI utility that provides advanced functionality and maximizes the performance of hardware. The utility package performs the standard hard disk utility functions, including formatting and installing drivers, but adds sophisticated partitioning, diagnostics and benchmarking features, as well as data encryption and access to SCSI 2 information.

Hard Drive TuneUp
Tunes up a hard drive for System 7
Macintosh Plus or larger; System 6.0.5 or later.

Hard Drive TuneUp takes the hassle out of upgrading hard drives and files when installing System 7. Features include: prepare a hard drive to support Virtual Memory; tune up a hard drive's performance by defragmenting files and reassigning data from defective sectors to safe ones; access files that are not System 7 compatible; create separate partitions for System 7 and System 6; lock partitions for "read only" security; test a drive for media degradation; create test logs to forecast media problems; and more.

Lido 7
Allows users to format and initialize any disk storage device; SCSI Manager 4.3 savvy
Macintosh Plus or larger; System 6.0.4 or later.

Lido 7 is a high-performance disk management utility that allows users to format and initialize any disk storage device on the Macintosh. Lido 7 is 32-bit clean for total compatibility with System 7, System 7.1 and WorldScript systems. The utility supports a broad line of devices, from 8-inch hard disk drives to the new breed of 2.5-inch SCSI hard disks. Also supported are removable cartridge hard disks from SyQuest and Ricoh; magneto-optical disks (5.25- and 3.5-inch) from MaxOptix, Ricoh, Sony, TEAC and others; and floptical mechanisms from Iomega and Insite Peripherals. Among the key features of Lido 7 is Dynamic Partition Resizing, which allows users to take a partition and resize it at any time. The utility also features a series of Defect Management tests that verify the operating condition of the disk drive, helping to assure the integrity of the data. It supports hard disks equal to or greater than 2 GB.

MacTools 3.0
Hard disk utilities
Macintosh Plus or larger; 4 MB of RAM; System 6.0.5 or later.

MacTools gives users automatic and comprehensive data protection, guarding against virus attacks, disk crashes, file deletions and much more. Included are: TrashBack, transparently tracks and protects deleted files and allows one-step undeleting directly from the Finder's Special Menu; AutoCheck, provides background scanning for constant disk crash prevention; DiskFix, analyzes disks automatically, providing disk analysis reporting and superior repair capabilities; FileFix, repairs damaged Microsoft Excel and Word files and simplifies file type and creator changes; Undelete, recovers deleted files quickly and easily; Mirror, tracks deleted files and automatically makes a copy of disk directory information; Optimizer, improves hard disk performance by defragmenting files and prioritizing their location on the disk; DiskEdit, provides sector-level interpretation and allows text and HEX handling; DriveLight, provides screen or keyboard indictors for disk drive read/write operations; Anti-Virus, provides continuous virus detection, removal and prevention, with 24-hour Anti-Virus Hotline for update information; and Backup, performs unattended, scheduled backups to tapes or network servers, prompts for floppy disk backups and optionally compresses data to save space. MacTools is System 7 compatible.

MasterFinder V1.2.1
Disk management utility
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.

MasterFinder allows for the complete control and manipulation of files and folders on any hard drive or floppy disk. It is a total replacement for the Macintosh Finder. Using a concept of window panes as its basic user interface, each pane displays file names from a directory of a mounted drive. MasterFinder's start-up view, the "Pane" View, consists of four panes that can display information on all mounted drives. MasterFinder has a sophisticated Find command; it is compatible with any network software to show users zones, nodes and more; allows for the cataloging of online and offline volumes for fast searches; expanded folder view for the inspection of the smallest of details; automatic application and document launching; Application Not Found override; file aliasing; AppleEvents, A/UX compatibility; and much more.

More Disk Space
Hard disk performance enhancement
Macintosh Plus or larger; System 6.0.5 or later.

More Disk Space is Alysis Software's alternative to archiving and compression utilities; the software automatically applies an array of data compression and space saving techniques to give users the maximum space that their hard disks are capable of containing — without any sacrifice in performance or compatibility. Users of the software can issue a single command from the program disk and literally double the capacity of their hard disks. Version 2.2 of More Disk Space features a new user interface with expert and novice modes, enhanced compression speed with tighter compression, uncompressed size visible within Get Info, exception by Finder label and support for hardware acceleration.

Mr. File 2.0
Finder alternative utility
Macintosh Plus or larger; 1 MB of RAM; System 4.2 or later.

Mr. File is a Finder alternative that copies, erases, moves and searches in the background. Multiple windows can be open at once; users can stack up a series of jobs for Mr. File to complete in the background while working in another application. Users can also launch while a copy job is in progress. User-defined, reusable Selection Lists contain files and folders regardless of what folder or disk they are in, ideal for project control, frequent copy jobs, building custom application launchers, archiving files on other disks and more. Mr. File's Quick Window holds a user's most frequently used items. Other features include: performance setting for smoother background operation or speed, launch override, set file info, save find presets, wild card searching and more. Mr. File is ideal for file copying, disk management and background downloading from AppleShare volumes or over AppleTalk Remote Access.

MultiDisk
Hard disk partitioning
Macintosh 512KE or larger; System 4.2 or later; System 6.0 and Finder 6.1 or later recommended.

MultiDisk allows users to partition any hard disk into multiple hard disks. Partitions can be created as resizable, password protected and encrypted. Grouping files into partitions increases overall disk performance and locking partitions adds security against viruses. Features include: increases disk performance by grouping files into separate partitions; password protection; network users of AppleShare and Tops can remotely mount partitions separately; partitions are conveniently accessible through a desk accessory; partitions can be individually set to automatically appear on the desktop at start-up or only when requested; add or delete partitions at any time without having to reinitialize the hard disk; files in one partition will not be affected by directory damage to another partition; and the ability to resize a partition without having to recreate it. MultiDisk is System 7 compatible.

Norton Utilities For Macintosh V2.0
Data recovery, disk repair and backup
Macintosh Plus or larger; 2 MB of RAM (3 MB for System 7); hard disk drive; System 6.0.4 or later.

Norton Utilities for Macintosh combines and enhances the features from two products: SUM II and Norton Utilities. The combination of these two products results in a utility software package that offers fully integrated advanced disk repair and recovery, automatic backup, data security, productivity tools and system enhancements in one informative, easy-to-use product. Version 2.0 goes deeper to recover lost or damaged data in a wider variety of circumstances, and the Norton Disk Doctor diagnoses and repairs damaged hard disks and floppies automatically with a single click of the mouse. Norton Utilities allows users to protect valuable data and make day-to-day functions a breeze.

On Location V2.0.1
Reduces the time it takes to find and view files
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later.

On Location is a desk accessory that dramatically reduces the time it takes to find and view files. The software indexes the name and text of files on any volume, including hard disks, network servers, diskettes and CD-ROMs. It combines digital-signature compression technology, Claris/DataViz file translators for displaying text stored in most word processing formats, and automatic background indexing. Once a file is found, users can use On Location's view window to instantly examine its contents and copy text to the Clipboard. The view window displays fonts and styles for most popular word processing programs. On Location's view window is read-only. However, if users want to edit files, they can launch them into application programs directly from On Location. Users can also move, copy, rename and delete files. On Location includes an INIT that loads into the Mac during start-up. When files are created or saved, the INIT makes note of the change. During periods when the Mac is idle, On Location automatically indexes the file's name and complete text in the background, ensuring that indexes are up to date as information evolves. On Location also supports Apple Events, which allows other applications to take advantage of On Location's search capabilities. The program is System 7 compatible.

Orphan Finder
Manages orphan files
Macintosh Plus or larger.

Orphan Finder searches disks for files that were left behind when the associated parent programs were deleted. Parent programs can be applications, INITs, CDEVs and desk accessories, and orphan files could be documents, preference files, dictionaries or temporary files. Orphan Finder can find parents, report and move orphans and change the creator of orphans (adopt them). Orphan Finder works interactively or in scripted mode on a network. Orphan Finder reclaims disk space being taken up by unnecessary files and flags down which applications users are missing to open their important documents. In addition, Orphan Finder locates orphaned Aliases and duplicate Parents and deletes empty folders. Orphan Finder works best with System 7 by taking advantage of aliases and works well with System 6.

Remus
RAID disk array software
Macintosh with 68020 or larger processor or PowerPC; 4 MB of RAM; System 7.0 or later.

Remus is a software driver that allows multiple SCSI hard drives to be combined into a disk array. This provides high speed for disk-intensive applications, such as desktop publishing or digital video, and full RAID data protection for file servers or other data-critical applications. Remus supports RAID levels 0 (striping), 1 (mirroring), 4 and 5. A wide variety of SCSI accelerators are supported for increased performance. Remus also supports the built-in SCSI port. Any SCSI-compliant hard drive can be used, and drives of different types and sizes can be mixed. Every partition created by Remus has its own RAID level, so multiple levels may be used at once on the same drives. Remus is the perfect solution for users in need of high-speed I/O or safe data storage.

Retrieve It!
File finding and opening utility
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later.

Retrieve It! quickly and easily finds any file anywhere on a Macintosh hard disk, floppy, CD-ROM or file server. It is a powerful, affordable desktop utility that can be easily used by anyone with multiple files, from novice to power user. It searches inside files, as well as file names for any specified text string by single word or entire phrase. Searches may be simple to complex: from simply finding a file, which contains a phrase to complex date-delimited Boolean searches, such as locating all files modified in the past three months. Once a file is located, it can be viewed rapidly as simple text to determine whether it is the correct file. The file can then be opened from directly inside Retrieve It! by using the full application with which it was created. Retrieve It! doesn't tie up the Macintosh during long searches; it searches in the background and signifies when the hunt is over with the bark of a golden retriever icon.

Spot CD
CD driver
Macintosh Plus or larger.

Spot CD is an advanced CD driver with features to dramatically improve performance. Spot CD has full multi- and single-session Photo, audio and data CD support and ships with all necessary access files and QuickTime. With the two types of caching, RAM and File caching, performance is dramatically improved over other CD drivers. The RAM cache allows users to cache frequently used data so they don't have to access the CD unit. Often used data is kept in the RAM cache so that data is instantaneously accessed. Users can easily adjust the RAM cache size and caching algorithm to maximize individual performance. The File cache retains the CD directory information on the internal drive so that instead of having to access the directory on the CD, the Macintosh accesses the cached directory on the internal drive. The faster internal drive access time increases performance substantially.

MacPEAK; 3701 Bee Cave Rd.; Austin, TX 78746; 512-327-3211 or 512-327-9553 (fax)

Spot On
Driver, formatting and caching software for Winchester, MO, SCSI II and removable drive
Macintosh Plus or larger; hard disk drive.

Spot On is formatting, partitioning and caching software for all popular Winchester, MO and removable drives. It is a fast, dependable driver that can use quick internal Macintosh RAM to store and retrieve data instead of accessing the slower drive. Retrieval speed is boosted up to 20 times, with further speed increases available with Queued Writes. The intelligent caching learns user work patterns and automatically saves at shutdown and restores information to cache at startup. It monitors all disk access to alert users to potential problems and has a repair function to prevent drive failures. Multiple partitions and partition types can be created to better organize data. Password protection offers various levels of drive security. Spot On is simple to use with the click of just one button to prepare a drive for use. The Fastermath option improves floating point calculations to boost number crunching and color animation speeds with 881/2 chips.

Stacker For Macintosh
Doubles hard disk capacity
Macintosh Plus or larger; 1 MB of RAM; System 6.0.5 or later.

Stacker is a safe and transparent way to double disk capacity. Users install Stacker Software with a few mouse clicks and never have to think about it again. The only thing that changes is the space available on the disk. Stac Electronics' patented LZS technology is fast and efficient, compressing all files. With Stacker, users can directly work with compressed database files. Stacker is fully compatible with all applications, INITs, SCSI disk drivers and utilities — even file recovery programs, such as Norton Utilities. Stacker AutoProtect checks file structures everytime users restart the Macintosh and allows automatic error recovery. Stacker Anywhere lets users use their hard disk or removable cartridge on any Macintosh. There's no additional software or hardware required.

SuperSpot
Drive formatting and caching software
Macintosh Plus or larger.

SuperSpot is Macintosh formatting, partitioning, caching and mirroring software for all popular Winchester, MO, removable drives and CDs. SuperSpot is a fast, dependable driver that enhances performance for all drives. SuperSpot has all the features of MacPeak's Spot CD and Spot On products, plus mirroring and other features. User-defined caching greatly increases overall performance on all drives and CDs, boosting productivity. Different caching types remember work patterns to keep often used information at users' fingertips. Numerous advanced options allow users to easily adjust caching, password protection, removable media ejection and blind reads and writes options. Although SuperSpot has many advanced features, it is simple and intuitive to use.

Symantec Utilities For Macintosh (SUM II) V2.1
Comprehensive disk utilities package
Macintosh Plus or larger; System 4.2 or later; Finder 6.0 or later.

Symantec Utilities For Macintosh is a collection of six specialized utility programs designed to keep a hard disk operating at peak performance. Utilities include: SUM Shield, which will restore lost files and crashed hard disks; SUM TuneUp, which optimizes a hard disk so it will run at peak performance; SUM Tools, which lets users view and edit data and resource forks of any file or volume in HEX or ASCII; SUM QuickCopy, which provides for fast disk duplication or initialization; SUM Partition, which allows users to separate a hard disk into separate volumes and encrypt them; and SUM Disk Clinic, which is an interface that allows users to take advantage of all the utilities.

TimesTwo
Increases disk storage capacity
Macintosh Plus or larger; 2 MB of RAM; System 6.0.4 or later.

TimesTwo takes a completely new approach to increasing disk storage capacity. Unlike file compression utilities, which make files smaller, TimesTwo actually makes the disk bigger. After installing TimesTwo, users have an expanded disk with all their files exactly where they were before installation. That means users can store more data on the disk without having to do anything. Once users have installed TimesTwo, they can get right back to work with more disk capacity. Because TimesTwo expands the disk, rather than making the files smaller, it is completely compatible with all Macintosh applications, including file and disk recovery software, such as The Norton Utilities and Central Point's MacTools. TimesTwo is also fully compatible with virus checkers like SAM and Virex. TimesTwo works with all SCSI disks, including SyQuest, Bernoulli and erasable optical disks.

Crystal Image System—Parallel Plotter Driver
Network plotter driver for all Macintosh applications
Macintosh II or larger.

The Crystal System is a high-speed parallel rasterizing electrostatic (VPI) plotter driver. It provides a plug and play, point and shoot, Chooser-level, easy-to-use driver for large-format black and white or color plotter output. The interface supports all standard Macintosh and QuickDraw-based applications and delivers extremely high-quality smooth fonts and graphics output. Plotter output devices are available in 11-, 24-, 36- and 44-inch widths in resolution options of 200, 300 or 200/400 dpi. Black and white or color plotters are available, as are complete turnkey network software drivers for plotters connected directly to a Macintosh, as well as plotter access to plotters on non-Macintosh servers.

Drives the HP DesignJet series of ink jet plotters from Macintosh computers
Any color-capable Macintosh; 4 MB of RAM; System 6.0.5 or later.

DesignPlot is software to drive the Hewlett-Packard DesignJet series of ink jet plotters, both color and monochrome, from Macintosh computers. Selected from the Chooser, it lets users transparently plot photographic or drawn images and top-quality text in millions of colors from any of the common Mac (QuickDraw-based) programs. It features background spooling under both System 6 or 7 and a full plot preview.
$599 retail
GDT Softworks Inc.; 4664 Lougheed Hwy., Ste. 188; Burnaby, BC, Canada V5C 6B7; 604-291-9121, 800-663-6222 (U.S.) or 604-291-9689 (fax)

Jade System—SCSI Or Serial Plotter Driver
Network plotter driver for all Macintosh applications
Macintosh II or larger.

The Jade System is a high-speed rasterizing plotter driver. It provides a plug and play, point and shoot, Chooser-level, easy-to-use driver for large-format black and white or color plotter output. The interface supports all standard Macintosh and QuickDraw-based applications and delivers extremely high-quality smooth fonts and graphics output. Plotter output devices are available in 11-, 24- and 36-inch widths in resolution options of 200 or 200/400 dpi. Black and white or color plotters are available, as are complete turnkey network software drivers for plotters connected directly to a Macintosh, as well as plotter access to plotters on non-Macintosh servers.

Raster Imaging, Inc.; 37300 Central Ct., Ste. 3; Newark, CA 94560; 510-797-2547, 800-964-6243 or 510-797-2548 (fax)

MacPlot DMA Electrostatic
Chooser-level, parallel electrostatic plotter driver
Macintosh that supports NuBus cards; 8 MB of RAM; hard disk drive.

MacPlot DMA Electrostatic is a Chooser-level driver that drives CalComp, OYO, RasterGraphics and Versatec electrostatic plotters. It supports virtually all Macintosh standard programs in CAD, engineering, drawing, presentation and graphics fields to produce high-resolution color output. The easy-to-install Direct Memory Access (DMA) NuBus card allows direct raster output, increasing the speed of data transfer. It supports ATM and TrueType fonts to produce high-resolution WYSIWYG text output. Users simply install the driver in the System folder and control it from the Chooser. Also available is a function to create raster or compressed raster disk files. MacPlot is System 7 compatible.
$2,495 retail
Microspot; 12380 Saratoga-Sunnyvale Rd., Ste. 6; Saratoga, CA 95070; 408-253-2000, 800-622-7568 or 408-253-2055 (fax)

MacPlot Electrostatic
Chooser-level electrostatic plotter driver
Macintosh Plus or larger; 1 MB of RAM; hard disk drive.

MacPlot Electrostatic is a Chooser-level driver that drives major brand electrostatic plotters, including CalComp and Versatec. It supports all Macintosh standard programs in the CAD, engineering, drawing, presentation and graphics fields to produce high-resolution color output from any Macintosh with only 1 MB of RAM required. It supports QuickDraw formats to produce resolution up to that of the plotter and supports ATM and TrueType fonts to produce high-resolution text output. Users simply install the driver in the System folder and control it from the Chooser. Background printing is available. The driver is easy to use, System 7 compatible and fully networkable by using Shiva's NetSerial.
$595 retail
Microspot; 12380 Saratoga-Sunnyvale Rd., Ste. 6; Saratoga, CA 95070; 408-253-2000, 800-622-7568 or 408-253-2055 (fax)

MacPlot HP-GL/2 InkJet
Chooser-level plotter driver
Any Macintosh; 1 MB of RAM; hard disk drive.

MacPlot is a Chooser-level driver that drives the Encad Novajets, Hewlett-Packard 7600 series and DesignJet plotter series in HP-GL/2 format. It supports all standard Macintosh programs in the CAD, engineering, drawing, presentation and graphics fields to produce high-resolution color output. It supports QuickDraw formats to produce resolution up to that of the plotter, and supports ATM and TrueType to produce higher resolution text output. User-configurable page sizes and built-in background plotting are also supported. MacPlot is easy to use, System 7 compatible and fully networkable.

MacPlot Pen Plotter Standard And Professional
Chooser-level pen plotter drivers
Macintosh 512K or larger; 1 MB of RAM; hard disk drive.

MacPlot Pen Plotter Standard is a Chooser-level driver that drives more than 30 different A- and B-size pen plotters, including CalComp, Hewlett-Packard, Houston Instrument, Océ Graphics, Mutoh and Roland. MacPlot Pen Plotter Professional is a Chooser-level driver that drives more than 100 different pen plotters, vinyl and sign cutters in A through E size. Both drivers offer user-configurable page sizes (the Professional

These Products Available Through Bottom Line Distribution
1-800-347-1923

offering page lengths limited only by the plotter); support 32-bit QuickDraw; recognize 16 million colors; support ATM and TrueType to produce laser-quality text output, even for outline/hollow text; are System 7 compatible; are networkable using Shiva's NetSerial; and offer online and Balloon Help, Plot Preview functions and Status Dialog Feedback. The Professional version also supports background plotting via MacPlot's own Backgrounder program and creates Plot command files in HPGL, CalComp 907 and other formats.

MacPlot Raster
Chooser-level plotter driver
Macintosh that supports NuBus cards; 8 MB of RAM.
MacPlot Raster is a Chooser-level driver that drives the Hewlett-Packard DesignJet series, including the DesignJet 650C, and the Encad NovaJet ink jet plotters up to paper size E. It supports virtually all Macintosh standard programs to produce high-resolution WYSIWYG color output. The easy-to-install Direct Memory Access (DMA) NuBus card allows direct raster output, increasing the speed of data transfer. It supports ATM and TrueType fonts to produce high-resolution WYSIWYG text output. Users simply install the driver in the System folder and control it from within the Chooser. Also available is a function to create raster or compressed raster disk files. MacPlot is System 7 compatible.

Mesa Graphics Plotter Utility
Plotting application for Apple, Hewlett-Packard and Houston Instruments plotters
Macintosh Plus or larger; System 6.0 or later.
The Mesa Graphics Plotter Utility provides professional fonts for exceptional results on Hewlett-Packard and Houston Instruments plotters for professional drawings or business plots in color. The utility supports the PICT format, is MultiFinder compatible, provides background plotting and network access to plotters with Shiva Corp.'s Net Serial hardware. A flexible color interface is provided for monochrome or color Macintoshes. Mesa Graphics Plotter Utility supports Hewlett-Packard or HPGL-compatible plotters, Houston Instruments or DMPL-compatible plotters and the Apple color plotter. It provides accurate control of output scaling for engineering drawings and automatic sizing for business plots and supports sizes A through E (8.5 by 11-inches through 35 by 48-inches) if supported by the plotter.
$125 retail
Mesa Graphics, Inc.; PO Box 600; Los Alamos, NM 87544; 505-672-1998

Plottergeist 2.1
Chooser-level plotter/vinyl cutter driver
Macintosh Plus or larger (background printing requires 2 MB of RAM and MultiFinder).
Plottergeist is a Chooser-level plotter/vinyl cutter driver for the Macintosh. It features background plotting (allowing users to work on the Macintosh while plotting), full System 7 compatibility (including balloon help for all plotting functions and direct TrueType and ATM font rendering), direct support for many different plotter and vinyl cutter models (including ones from Hewlett-Packard, Roland, CalComp, Mutoh and Ioline) and a plot to disk option for sending work to a service bureau or different machine. The program combines the simplicity of a regular printer driver with WYSIWYG quality users didn't think they could expect from a plotter driver. It works with a variety of CAD, graphics and presentation programs, such as MiniCad, Claris CAD, Canvas, PageMaker and more. It comes with a 30-day, money-back guarantee.
$399 retail
GDT Softworks Inc.; 4664 Lougheed Hwy., Ste. 188; Burnaby, BC, Canada V5C 6B7; 604-291-9121, 800-663-6222 (U.S.) or 604-291-9689 (fax)

Utilities/Printer Drivers

Freedom Of Press Pro
Prints complex, high-quality PostScript language text and graphics files on a wide range of non-PostScript imaging and printing devices
Macintosh II family or larger; 4 MB of RAM (8 MB or more recommended for maximum performance and background operation); math coprocessor; 4 MB of hard disk space; System 6.0.5 or later.
Freedom of Press Pro provides PostScript language compatibility for a variety of professional imaging and printing devices. It allows users to output text and graphics files to a wide range of devices, or to create variable resolution raster data output files from PostScript language input in color or monochrome. It supports more than 60 color and monochrome printers, including laser, ink-jet, dot matrix, color thermal and sublimation dye printers. Supplemental Drivers are available for the Canon Color Laser Copier 500, 300, Canon BJ-A1, several large-format color electrostatic plotters and Scitex file formats output. Freedom of Press Pro also supports 24-bit film recorders, as well as TIFF, PICT, Targa and raw raster file output in variable resolutions. The Anti-Aliasing option dramatically enhances the quality of both text and graphics on continuous-tone color devices. The program also includes ColorVantage, ColorAge's CAI's unique automatic correction for scanned images output on selected devices. The Screen Preview feature allows users to preview PostScript files in color or black and white before printing. The program includes 35 scalable/rotatable outline fonts and directly supports ATM and hinted Adobe Type 1 fonts. Freedom of Press Pro is System 7 compatible.

MacJet And On Page
Printer drivers
Macintosh Classic or larger.
MacJet is a printer driver that enables Macintosh computers to connect to a DOS-based printer sharing network with non-PostScript printers. On Page is the PostScript version.
$99 retail; MacJet
$149 retail; On Page
ASP Computer Products, Inc.; 160 San Gabriel Dr.; Sunnyvale, CA 94086; 408-746-2965, 800-445-6190 or 408-746-2803 (fax)

MacJet III
Chooser-level QuickDraw printer driver
Macintosh Plus or larger; 1 MB of RAM; System 6.0.5 or later.
MacJet is an advanced Chooser-level QuickDraw printer driver that allows HP laser printers or compatibles to operate with any Macintosh. Features include: converts PostScript Type 1 or TrueType fonts into downloadable HP fonts. Prints color text and graphics as gray scale on black and white printers. It supports serial (through 57.6K), parallel or optional AppleTalk I/O. It features WYSIWYG operation with print Preview.
$149.95 retail
Computer:applications, Inc.; 12813 Lindley Dr.; Raleigh, NC 27614; 919-846-1411 or 919-846-1412 (fax)

MacPalette II
Color printer driver for the ImageWriter II
Macintosh Classic II or larger.
MacPalette II allows color printing of graphics and text from virtually all software on the ImageWriter II. Printing can be done from any Macintosh with a color monitor. MacPalette II allows 250,000 colors to be produced from just a four-color ribbon. This Chooser-level replacement printer driver is easy to operate with online help dialog boxes. Also available is a scaling feature for ImageWriter output from 10 to 1,000 percent. Gray-scale output can be done using a black ribbon. It is fully compatible with Adobe Type Manager and TrueType. An AppleTalk version is available that allows an unlimited number of users to print to one ImageWriter II. MacPalette II is System 7 compatible and allows background printing on the ImageWriter II.
$69 retail
$249 retail; AppleTalk version

MacPrint
HP LaserJet/DeskJet printer driver
Macintosh Plus or larger.
MacPrint is capable of driving the LaserJet Series IID, IIP, III, IIID, DeskJet, DeskJet 500, LaserJet II, LaserJet 2000, LaserJet 500, LaserJet Plus and DeskJet printer from the Macintosh. The product will also run on any HP-compatible laser printer, such as those available from Epson, Panasonic, Okidata and Lexmark. MacPrint is installed as a Chooser-level device using a supplied installer program. The MacPrint Chooser shows each individual printer's features, allowing a user to take full advantage of each printer's capabilities. It also provides control for duplex printing, binding margins and cover pages. MacPrint uses the printer's resident fonts, when possible, to create output. It has the additional capability of creating a printable font based on the Macintosh QuickDraw screen font in print resolutions of 300, 150 or 75 dpi.

PCL4T
Allows IBM PCs to print from HP-compatible software to PostScript-only laser printers
IBM PC; DOS 3.0 or later; PostScript printer.
PCL4T is a PC-based utility that allows IBM PCs to print from HP-compatible software to PostScript-only laser printers. This TSR converts the HP-PCL codes to PostScript automatically. PCL4T allows owners of the Apple LaserWriter, LaserWriter Plus and other non-PCL, PostScript printers to print from virtually any PC-based software package. PCL4T has built-in Auto-Emulation Sensing, so users need never worry about manually reconfiguring their printers to operate in different Page Description Languages. PostScript printers that would benefit most from this TSR include the Apple LaserWriter and LaserWriter Plus; the QMS PS 800, 800+ and 810; and all other PostScript printers that do not have HP LaserJet emulation.
$75 retail

PowerPrint 2.5
Printer drivers that allow users to print from a Macintosh to more than 1,000 laser, inkjet and dot matrix printers
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.7 or later.
PowerPrint is a collection of fast QuickDraw printer drivers that enable Macintosh computers to print to Canon LaserBeams and BubbleJets, HP LaserJets and DeskJets, Epson FXs and LQs, Toshiba P-Series, NEC Pinwriters and hundreds of compatibles (more than 1,000 printers). A few of its many features include: built-in spooler; user-definable custom paper sizes and default dialog settings; enhanced gray scales; image reduction, enlargement, flipping and inversion; and even/odd pages printing. Features, such as color, multiple bins, duplex printing, job offset and internal fonts, are supported for most printers. PowerPrint drivers are Chooser-level and are compatible with

System 7, A/UX, Adobe Type Manager, TrueType and Communications Toolbox. PowerPrint comes complete with a high-speed, serial-to-parallel converter cable — ideal for PowerBook users who want access to just about any printer on the road or who want to use PC-compatible portable printers, such as Canon's 10ex or HP's DeskJet Portable. Network versions are also available. With version 2.5 users can print 32-bit color on color printers — Cannon BJC-600 or Hewlett Packard DeskJet 560C.

PowerPrint/NW 1.0
Allows users to print from a networked Macintosh to more than 1,000 printers over Novell NetWare
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.7 or later.

PowerPrint/NW is a collection of fast, Novell NetWare-compatible, QuickDraw printer drivers that enable Macintosh computers to network and print to Canon LaserBeams and BubbleJets, HP LaserJets and DeskJets, Epson FXs and LQs, NEC Pinwriters and hundreds of compatibles (more than 1,000 printers). All drivers are designed to connect to printers that have been set up on Novell print servers, as remote printers on networked PCs or via direct network interfaces. A few of its many features include: built-in spooler; user-definable custom paper sizes and default dialog settings; enhanced gray scales; image reduction, enlargement, flipping and inversion; and even/odd pages printing. Features, such as multiple bins, duplex printing, job offset and internal fonts, are supported for most printers. PowerPrint/NW drivers are Chooser-level and are compatible with System 7, A/UX, Adobe Type Manager, TrueType and Novell NetWare 3.11 or later. Stand-alone and other network versions are available.

■ **StyleScript For The Apple Color StyleWriter Pro**
Upgrades Color StyleWriter
Macintosh with 68020 processor (except Macintosh II); 8 MB of RAM; System 7.0 or later; 5 MB of free hard disk space.

StyleScript is genuine Adobe Level 2 PostScript software that upgrades Color StyleWriters to their maximum capabilities. With StyleScript, users can accurately print color images and easily use their Color StyleWriter as an inexpensive proofing machine for more expensive printers. Because StyleScript is genuine Adobe PhotoScript, users are assured of complete compatibility with their programs and files. StyleScript's PostScript is also Level 2, so color calibrations and separations will match other color PostScript devices. With StyleScript, users have access to Adobe's latest technology. StyleScript is based on a new version of Adobe's proven CPSI (Configurable PostScript Interpreter) technology — a fast, upgradeable form of PostScript that resides in the computer instead of the printer. StyleScript is easy to install and use, and is designed specifically for the printer. The driver can use all four media types (plain paper, coated paper, transparencies and back-print film) and can produce images at the printer's highest resolution.
$149 retail
GDT Softworks Inc.; 4664 Lougheed Hwy., Ste. 188; Burnaby, BC, Canada V5C 6B7; 604-291-9121, 800-663-6222 (U.S.) or 604-291-9689 (fax)

TTS Print
Canon LBP and HP LaserJet printer access for Macintosh users
Macintosh Plus or larger; 4 MB of RAM; System 7.

TTS Print allows Macintosh users to print directly to the Canon LBP series, HP LaserJet printers or any other printer equipped with the Adobe PostScript cartridge. Previously, the PostScript cartridge without the AppleTalk card was strictly accessible to IBM users. Features include: supports all Adobe PostScript fonts and printer effects available with the PostScript cartridge; retains all PostScript capabilities; easy to install and use; functions as an application and runs in the background using MultiFinder; requires no special commands or unusual connections; connection via the Macintosh modem port allows for the use of an additional printer connected to the printer port; prints at the same speed as if sent from an IBM or compatible computer; allows multiple Macintoshes on AppleTalk to print to the printer; and includes the TTS Print cable.
$139 retail

Utilities/Print Spoolers

CGM-View
Allows users to preview CGMs
Macintosh II; A/UX.

CGM-View is a stand-alone application for preview and hard copy output of CGMs. This application is often used as a filter for print spoolers in multiuser and network environments, providing users with background printing and plotting at the output device's full resolution. CGM-View reads CGM files in binary, character and clear text formats and outputs them to any supported screen display or hard copy device. Numerous output devices are currently supported, including pen plotters; impact, ink jet and hot wax printers; film recorders; and electrostatic plotters. CGM-View can also convert CGMs to HP-GL and PostScript files. CGM-View provides zoom, pan and rotate functions, as well as basic editing functions, such as color and text modification.

CI-Spool
Unix printing manager
Macintosh SE/30 or II family; 4 MB of RAM; 80 MB hard disk drive; A/UX 3.0 or later.

CI-Spool is a Unix printing manager that offers extensions to Unix resident printing managers. It is written in C and works both on ATT System V and BSD 4.3 environments. It recognizes VT100 ASCII VDU, Macintosh and Windows, providing an easy-to-use interface. When launched from a Macintosh, CI-Spool can be used in the same manner as a Macintosh program, allowing users to open several windows that show different printing queue files. Users can also change the printing characteristics of any file to see its progression in the printing queue. Features include: differentiate the origin of each printing request; allocate paper size; real-time display of print queue; recognize VT100 Terminal, Macintosh or Windows; reprint from any page and display the printing page content.

About Software Corp.; 10601 S. De Anza Blvd., Ste. 211; Cupertino, CA 95014; 408-864-7954 or 408-864-0694 (fax)

Color Central 2.1
OPI/DCS print server
Macintosh SE/30 or larger; 4 MB of RAM; hard disk drive; System 7.0 or later.

Color Central is an OPI/DCS print server that is designed for prepress operations working with high-resolution color and halftone images. It allows users to work with a low-resolution placement file, while the larger color separations or high-resolution images reside on the Color Central server. The workstation becomes significantly more productive because it works with a dramatically smaller file that can be rotated, cropped and scaled in a matter of seconds. When the file is sent to the Color Central print queue, a user's Macintosh is released very quickly. Color Central allows a maximum of six printer devices and 16 print queues. This provides the simultaneous spooling of jobs to many print devices over a network. Using the included Color Central Remote, an administrator can perform management functions remotely from their workstation, including inquiries on the status of jobs and the amount of traffic on the system.

Aldus Corp.; 411 First Ave. S, Ste. 200; Seattle, WA 98104; 206-622-5500, 800-685-6636 or 206-343-4248 (fax)

Color Express
OPI/DCS graphics printer server
Any Macintosh.

Color Express is a Macintosh-based OPI/DCS graphics printer server that allows up to six printers and 16 Chooser-level print queues to be configured and monitored. Color Express will store and manage high-resolution color or monochrome graphics and provide low-resolution "samples" for use in page makeup. Jobs in queues may be rearranged, placed on hold or moved between queues. All encountered errors are recorded, while Color Express continues on to the next job. Color Express features remote access to these management controls and supports all networked PostScript printers.

CT-Spool
Tandem mainframe to Apple LaserWriter print spooling
Macintosh II or larger; System 7.0 or larger; Tandem computer.

CT-Spool provides a link between Tandem's spooler and printers, accessible through AppleTalk-based LANs. It provides local control over Tandem host documents, including capabilities to hold and release jobs locally and to specify multiple copies. Using the standard Macintosh interface, CT-Spool provides users with the capability to specify (and modify) the document font, font size, style, margins, page orientation, size, etc. A library of different formats can be maintained to address a variety of formatting needs: program listing vs. letters vs. manuals, and spooled output can be automatically associated with a given format. A series of processing windows are provided to assist users in monitoring and evaluating the spooling and printing processes. CT-Spool shares the printers with other Local Area Network users.

■ **Microspot AppleTalk Printer Tool**
Communications Toolbox connection tool
Macintosh II or larger; System 7.0 or later; Communications Toolbox installed.

The Microspot AppleTalk Printer Tool is a Communications Toolbox connection tool that will transmit data to any AppleTalk printer or print queue, on a network, using the Printer Access Protocol (PAP). The Microspot AppleTalk Printer Tool is compatible with all applications or utilities that support the Communications Toolbox. Once configured, when the AppleTalk Printer Tool receives an instruction to transfer data, it deals with the details of transmission. The command language can be HPGL, HPGL/2, RTL, PostScript or

These Products Available Through Bottom Line Distribution
1-800-347-1923

any other data format. The Microspot AppleTalk Printer Tool is compatible with all Macintoshes and Power Macintoshes. It enables communication in a variety of situations, to a Hewlett-Packard DesignJet fitted with an AppleTalk JetDirect MIO card or to a Novell print server running NetWare for the Macintosh. When sending print data to a Novell server, the data is dropped directly into the Novell print queue and passed to the appropriate printer.

Microspot PrintSender
Reads in any data file and sends the data out of any supported output port
Macintosh Plus or larger; 1 MB of RAM; System 6.0.7 or later.

The Microspot PrintSender is a simple application designed to read in any data file and send the data out of any of the supported output ports on a Macintosh. The data files can be in any format as long as the device at the other end of the communications port understands the data being sent to it. Examples of this could include: sending an HPGL file to a pen plotter, an RTL file to an ink jet plotter, a PostScript file to a LaserWriter or maybe a text file to a modem. The Microspot PrintSender also has the ability to set up a "Hot" folder so that if any data file is put into that "Hot" folder, it is automatically read in and sent out of the currently selected port. Other features include Queue Management, which enables users to set any length of delay time, set the print time and reorder the files waiting to be printed. It will also allow for delays between prints, including prompts to change the paper.
$129 retail
Microspot; 12380 Saratoga-Sunnyvale Rd., Ste. 6; Saratoga, CA 95070; 408-253-2000, 800-622-7568 or 408-253-2055 (fax)

Print Central
Print server
Macintosh SE/30 or larger; 4 MB of RAM; hard disk drive; System 7.0 or later.

Print Central is an easy-to-use print server for the processing of high volumes of print jobs to PostScript output equipment. It offers the advantage of a "multiple device" print server so a user's computer is released instantly while Print Central handles the downloading of jobs to the printer(s). This multiple printer queue capability provides the simultaneous spooling of jobs to many print devices over a network. Print Central gives users a greater level of productivity by reducing the amount of waiting time that is often associated with the printing of large or complex files. A network administrator can perform management functions, such as reprioritizing, removing or putting jobs on hold remotely from their workstation. Print Central provides up-to-the-minute error and activity reports, giving an administrator complete information about the status of jobs and the amount of traffic on the system.

Aldus Corp.; 411 First Ave. S, Ste. 200; Seattle, WA 98104; 206-622-5500, 800-685-6636 or 206-343-4248 (fax)

■ **PrintShuttle**
Print spooling and management utility
Macintosh II or larger; System 7.0 or later.

PrintShuttle is a print spooling and management utility. PrintShuttle significantly speeds up the output performance of print jobs sent to networked laser printers. Unlike conventional print spoolers that "background" and utilize precious CPU power, PrintShuttle sends print jobs to another machine on the network for the actual printing and interaction with the printer. PrintShuttle is compatible with any printer that uses the Apple LaserWriter driver. Besides offloading print jobs from the user's machine, PrintShuttle saves a significant amount of drive space because printer fonts can be removed from the user's System folder and consolidated on the print server. The PrintShuttle Starter Pack contains the print server application and software for one client. Additional Client Packs are available separately.

PServe 3.1
Dedicated PostScript printer server
Any Macintosh; LocalTalk or EtherTalk.

PServe is a dedicated AppleTalk hardware device that manages printer queues, as well as fonts, prep files and documents. Any Macintosh or PC on LocalTalk or EtherTalk can use PServe. PServe will manage up to eight PostScript devices. Each may have two input queues, an active queue and a hold queue. PServe generates job accounting by User, Job, Time to Print, Pages and Date/Time. Several output priorities are available, including "Keep" queue, which allows jobs to be re-printed directly from the server.

PServe ADS
Dedicated document server
Any Macintosh.

PServe ADS is a dedicated document server that provides graphics management, file serving, spooling, job tracking, multiple queues, error trapping and automatic picture replacement. A typical workflow for ADS would be scanning an image into a retouching package, retouching and then saving the EPS or DCS files to the server. The layout person would then generate a preview with the provided Preview Maker for placement in a page layout program. The preview may be scaled, rotated, cropped, stepped and repeated, etc. At print time, only a single line of code must go down the network for each image in the document, clearing the screen instantly and allowing users to get back to work. Meanwhile, at the ADS station, the line of code calls the high-resolution image, and it is included in the document and output.

SpeedDriver
Print job spooler, OPI server and PostScript output device driver
Macintosh II or larger.

SpeedDriver manages printer and laser imager queues and eliminates transferring large graphics files over a network to be included in a PostScript file for printing using OPI, including high-resolution color separations and halftones. SpeedDriver has spooler-like features to assign job priorities, print times, rerouting capability and error detection. Print jobs sent from other DT applications release from the workstations instantly when SpeedDriver is used to generate the PostScript data for the output devices independently from any other Macintosh or PC on the network.

Spool Express
Network print server
Any Macintosh.

Spool Express is a Macintosh-based network print server that effectively manages up to six printers with 16 Chooser-selectable print queues. Spool Express allows multiple workstations to print concurrently with improved speed and maintains a steady work flow, resulting in more productive workers. Jobs within a Spool Express queue can be monitored, reprioritized, placed on hold or even moved into another queue altogether. All encountered errors are recorded, while Spool Express continues on to the next job. Spool Express features remote access to these management controls and supports all networked PostScript printers.

Utilities/Security Software

Access Managed Environment (A.M.E.) 2.1
Security and virus program
Macintosh Plus or larger; 1 MB of RAM; System 6.0.7 or later.

Access Managed Environment (A.M.E.) is an integrated security and virus program. The carefully designed user interface makes it easy to set up a Macintosh with just the kind of security required. The program can maintain order on a Mac that is used by many people. Users can be given access to only the tools they need to do their work. For multiple users, access privileges can be set for files, folders, programs and disks. Other features include: Volume Lock, which prevents access to a hard disk when someone tries to start up with another system disk; Activities Log, which records the activities that take place on a user's Mac; viral protection; password options; auto sign off; auto sign on; true file erase; alerts; online contextual help; and more. A.M.E. is System 7 compatible.

ACE/Server
Protects AppleTalk networks against login attempts by unauthorized users at remote locations
TCP/IP connection between ARA V2.0 Multiport server and Unix platform acting as the security server.

The ACE/Server protects AppleTalk networks against login attempts by unauthorized users at remote locations. It adds a vital layer of access security without compromising logon convenience for authorized users. Client code provides the interface with remote users and transmits authentication requests to a network-based security server. A comprehensive audit trail assures user accountability and maintains a record of all administrative activity. Used in conjunction with Security Dynamics' patented SecurID Card, the ACE/Server positively identifies, authenticates and provides highly secure access control. The SecurID Card is a hand-held, credit card-sized token that generates and displays a unique, unpredictable, one-time access code every 60 seconds. To gain access to a protected environment, an authorized user must correctly enter via their system keyboard a memorized Personal Identification Number (PIN) immediately followed by the current code displayed on his/her SecurID Card.

AVUS
Anti-virus update service
Macintosh Plus or larger; System 6.0 or later.

Viruses not only cause bombs, malfunctions or system crashes, but users may also lose precious data. Subscribers to AVUS, Anti-Virus Update Service, automatically get a copy of the latest version of Disinfectant as soon as it is out. (Disinfectant is a free public domain application from John Norstad and AVUS is offered to users with John's express approval.) If there are less than six Disinfectant updates a year, AVUS subscribers will receive the remaining disks (included in their subscription, but not used for updates) filled with other new PD&S software.

BSafe
Toolkit that provides a variety of cryptographic functions
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.

BSafe 2.0 is the newest release of the cryptography toolkit. Fully compatible with keys and data from previous versions, it is a portable C toolkit that allows developers to integrate privacy and authentication features into virtually any application. BSafe modules can be used to construct anything from RSA Digital

Signatures to complex key exchange or negotiation schemes. BSafe provides a programmer with a complete palette of crypto algorithms, including RSA, DES, the exportable RC2 and RC4 ciphers, Diffie-Hellman and many more.

Camouflage
Security software system
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.2 or later.

Camouflage provides fast and secure protection of files and folders for network/phone data transmission or storage on any drive. Users can password encrypt files with DES or an even faster, very secure proprietary system. Camouflage features options to automatically double encrypt, using any combination of DES/proprietary methods to "hacker proof" sensitive, confidential or proprietary files/folders. Camouflage uniquely enables users to encrypt with one Macintosh (having the Camouflage application), then transmit encrypted data by LAN, WAN, telephone or physical transport of disk to any other Macintosh, even if Camouflage is not installed on it. With the proper password, the program will decrypt and then destroy itself, leaving only the decrypted data on the computer.

■ **CD-Meter**
Locks CD-ROM programs, which can be unlocked with a phone call to the seller company
Macintosh II or larger; 8 MB of RAM; 500 MB hard disk drive.

CD-ROM Meter is a kit that allows for the preparation of files for a CD-ROM in a "locked" format that can be unlocked with a simple phone call to the seller company. This allows a CD-ROM disc full of unlocked working and interactive demos, as well as a folder containing the locked full working versions of the programs. Now small software company cooperatives, large mail order operations, users groups or even a single publisher can offer demos and programs for sale on CD-ROM at reasonable prices. The CD-ROM Kit consists of three programs: CD-ROM Make program (creates the locked programs and two support files to be moved to the CD-ROM); CD-ROM Activate program (placed on the CD-ROM with the files created by the CD-ROM Make program — it allows end users to unlock a program and install it on their hard disk when provided with a code from the seller); and CD-ROM Sell program (placed on the computer of the telephone sales person, they enter three codes provided by the end user and this program will generate the "unlocking" code to give to the buyer).

Crypt Master
Encryption utility
Macintosh II family; 2 MB of RAM.

Crypt Master is a menu-driven public-key encryption utility that employs the Data Encryption Standard (DES) and the Rivest-Shamir-Adleman Public-Key Cryptosystem. It provides virtually unbreakable security for sensitive word processing documents, spreadsheets, databases, e-mail, fax transmissions and telex transmissions. Additional features include: digital signatures, message authentication, ASCII conversion, data compression and file erasure utilities. Crypt Master is only available to agencies and departments of the U.S. Federal Government. Available versions include A/UX (requires A/UX 1.1.1 or later) and MacOS.

CryptoMactic
Integrated desktop encryption, shredding and trash management
Macintosh Plus or larger; System 6.0.5 or later.

Users can use CryptoMactic for encryption. It's hacker-proof and is built directly into the desktop. To encrypt, users select an icon, press -1 and enter a code key. It's that easy. CryptoMactic offers the fastest, most rigorous algorithms and key management available. Users can even create self-decrypting files for secure communication and allow override or not. Without override, there are no backdoors. CryptoMactic also includes EasyTrash and Incinerate, indispensable utilities that trash and/or shred from the desktop with just a keystroke.

cypherPad
Security and locking program, accelerated for Power Macintosh
Macintosh Plus or larger; 1 MB of RAM; System 6.0.2 or later.

cypherPad is a privacy and computer, drive and partition locking program. It uses a distinctive, fun and easy-to-use alphabetic keypad, similar to ATM/cash machine, for privately entering passwords on the computer screen. Keypad characters change randomly, with user-established change rate. Password characters are also entered from the keyboard. Features include: easy installation, just enter password; locks on shutdown or power failure; idle time and screen "hot spot" screen saver and sign off options; unique PowerBook backlight battery saver and sleep-sign off option; "attempted break-in" alert on start up; activity logs; and floppy drive control option. This program is so robust, drives can be optimized with cypherPad installed. It works on Bernoullis, Syquests and Optical drives. An exportable version is available.

Datawatch Citadel With Shredder
Disk and file security tools
Macintosh Plus or larger; external disk drive or hard disk drive (recommended); System 6.0 or later.

Citadel is an extensive security toolbox that protects a computer from unauthorized access. With Citadel's password control and file encryption system, confidential information remains confidential. Citadel encrypts files, folders or entire hard drives with U.S. government standard DES file encryption for maximum security. Citadel includes Shredder and the Virex INIT. Shredder ensure that sensitive data that has been deleted is completely and permanently erased. Virex detects and prevents the intrusion of computer viruses.

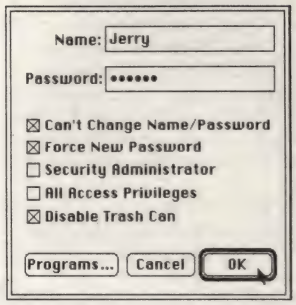
Empower I, II And Remote 4.1
Security software; System 7 compatible
Macintosh Plus or larger; System 6.0.4 or later.



Empower I is ideal for preventing unauthorized use of PowerBooks and single-user Macs. Once installed, users must register with the correct name and password upon startup, restart and after its secured screen-saver has been invoked to gain access. Security administrators' special privileges include a unique UnLock utility to override protection on locked volumes in emergency situations. Empower I's secured screen-saver can be set to instantly or automatically blank the screen and "lock-out" the Mac while users are away from their desk. Its floppy disk/drive controls allow users to prevent unauthorized startups from system diskettes, as well as the introduction of viruses. With Version 4.1, users can now save and quickly re-install their predefined security configurations should they need to temporarily release Empower. In addition, security administrators can also create default security configurations that will automatically be installed upon installation of Empower.

Empower II offers comprehensive data security for multiuser Macs. It user name/password registration controls prevent unauthorized use, while its floppy disk/drive controls prevent unauthorized startups from system diskettes. Empower II's secured screen-saver can also be set to automatically "lock-out" the Mac while users are away from their desk to protect open documents. Multiple users and security administrators may be defined, the latter having special privileges such as the unique ability to override protection on locked volumes in emergency situations. Empower II offers flexible folder-level access controls for defining who may see and/or make changes to files and folders, as well as controls to limit which applications, Apple menu items and control panel devices may be launched on a per-user basis. With Version 4.1, users can now copy-protect files and applications, and prevent files and folders from being removed, renamed or deleted.

Empower Remote is an administration tool that simplifies the time-consuming task of managing security in Macintosh networks. Its one-of-a-kind remote controls eliminate physical visits to individual workstations by allowing security administrators to set or change security options for any central point in the network. Administrators can conveniently add or delete users, verify preferences and make any other changes to

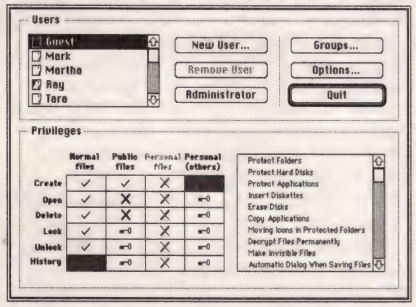
FileGuard V2.7.8
Hard disk, folder, application, screen locking, activity logging and file protection
Macintosh 512KE or larger, including Portable; System 4.2 or later.



FileGuard offers complete access management control, allowing an administrator to hand out privileges to authorized users. Hard disk protection prevents unauthorized users to set access privileges to specific folders (including the System folder), limits access and creates "write-protected" folders or "drop folders." Application protection provides copy protection on a case by case basis, as well as front-end password protection for all applications on a hard disk. File protection provides the option of encrypting files manually or automatically on the fly as they are created. Files can also be locked, personalized or made invisible at the desktop level. Opening encrypted files is easy and automatic with an optional password prompt. The document is automatically re-encrypted when a user quits. A complete activity log is kept for each encrypted file. The system usage log continuously keeps an activity record for all authorized users and/or groups. FileGuard's screen locking allows users to protect open files and sensitive information when the Macintosh is left running and unattended. Only a user's access code will unlock the screen, and the lock and log-off can be manually selected or automatically invoked after a period of idle time. An optional screen saver is available to prevent phosphor burn.

Folder Locker
Password protection for folders
Macintosh Plus or larger.

Folder Locker allows users to store secure information in normal Macintosh folders locked with a password. The contents of a locked folder can be easily accessed by double-clicking the folder while depressing a user-selected key. A user is then prompted for the password. If the correct password is supplied, the folder is unlocked and remains unlocked until explicitly relocked by a user or the machine is restarted. Folders can also be locked/unlocked from the Open... and Save... dialogs. Folder Locker provides "execute-only" applications via an option on a locked folder. This prevents theft of licensed applications on public access machines while still allowing use of the application. Folder Locker is System 6 and System 7 compatible.

FolderBolt 1.0.2
Integrated security for the Macintosh desktop
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.4 or later.

FolderBolt adds security at the desktop folder level by locking and unlocking Macintosh folders with a simple click of the mouse, ideal for shared machines or computer labs. FolderBolt allows users to customize their protection scheme with three very powerful options. Individual folders may be secured as completely locked, as read-only folders or used as password-protected drop folders. Groups of folders can be designated as a "set" that can be unlocked as a unit at startup and automatically relocked at shutdown. Users can lock the running System Folder, Trash Can and much more. Automatic internal virus checking and password preferences that define minimum length and expiration period are among FolderBolt's many extra benefits.

FoolProof Security Software
Desktop security
Macintosh Plus or larger; System 6.0.4 or later.

FoolProof Desktop Security is the only security product designed for schools that secures the Macintosh without covering the desktop. It is designed for use in computer labs, classrooms, training centers and libraries. FoolProof protects the Macintosh Finder and System while allowing users normal access to the desktop. FoolProof works with the Macintosh operating system to prevent unwanted changes. Files and folders cannot be dragged or renamed. File saving is directed to floppy disks, target folders on the hard drive or mounted volumes. Control panels and the Chooser can be locked. FoolProof makes minimal demands on system resources and does not conflict with other software. FoolProof is available in 10 packs, 30 packs, site and district licenses.

MacPassword 4.0
Password utility program
Macintosh Plus or larger; System 6.0.4 or later.

MacPassword is a powerful password utility program designed to protect hard disk drives from use by unauthorized users. In addition, there is built-in support for protection against all known viruses, as well as screen saver functionality. Version 4.0 includes the following features: superb support for the Macintosh Portable; screen saver password protection with user-defined intervals; higher security protection similar to AppleShare access privileges; virus protection superior to that found in other tools; volume locking for protected volumes; maintenance of a log file of attempted break ins and Virus attacks; context-sensitive online help; all new manual that is designed for the novice user; user interface that improves the ease of use and adds additional functionality; sound file playback during successful startup, unsuccessful startup, shutdown and guest access; animated startup icons in color and black and white; bad logon attempt message displayed when logon fails; guests can no longer access the MacPassword Control Panel device; abnormal shutdown will not leave system unprotected under Guest access; command key equivalents for most screen functions; unique error sounds; all dialogs centered over Control Panel instead of screen; will no longer allow duplicate entries in protected list box; and co-exists nicely with most of the new INIT Managers.

MacSecure
Protection and productivity tool
Macintosh Plus or larger; 2 MB of RAM; System 6.0.7 or later.

MacSecure is for Macintosh users who need to eliminate others from raising havoc on their computer's hard disk or network system. More than just a security product, it is a menu system that creates a more productive environment for multiple users. Unlike installing numerous system enhancements or cumbersome security products, MacSecure is easy to implement, costs less and has more features. With MacSecure, users can increase productivity; protect hard disks; reduce training requirements; eliminate unwanted deleting of files; control access to applications and documents; prevent virus infections and illegal copying; control where a user saves documents; and keep a consistent look on all Macintosh computers.

Menu Master Mac 2.0
Desktop management and security system
Macintosh Plus or larger; System 6.0.5 or later.

Menu Master Mac is a simple and easy-to-use desktop management and security system. Each user can have customized menus limiting access to predetermined applications and files. This simple process totally protects the computer's desktop and the Finder interface — no more loss of data, resetting the control panel and chooser settings, reinstalling system software or trying to find files. A user's time on the computer and number of printouts allowed is easily controlled. An easy-to-read log tracks all user activity. Menu Master Mac provides auto installation, a built-in screen saver and virus protection software. All menus are presented with display options for color icons; multiple background colors and patterns; and selectable fonts, sizes and styles. The Finder interface is maintained for total Macintosh continuity. Menu Master Mac is System 6 and 7 compatible.

NightWatch II
Complete security for hard disk drives
Macintosh 512K or larger; System 6.0.4 or later.

NightWatch II is complete security for Macintosh hard disks. While a user is away, it provides ironclad disk access protection. While a user is at work, its instant screen privacy feature thwarts snooping and well-intended rummaging through the desktop. It is fully networkable and provides a multitude of protection and timed-locking options, animated screen-saving images and entertaining sounds. NightWatch II offers three hard disk protection options: Diskless, Key Disk and Classic Token Disk. Diskless protection allows users to unlock their hard disk(s) using only a valid name and password at startup. Under both the Key and Classic Token Disk options, added security is

available by requiring the use of an authorized diskette to obtain access. NightWatch II also provides password screen locking instantly, at preset times or after a certain period of inactivity. With its unique signatured design, users can create master passwords, master key disks or use an administrator to override protection in the event passwords are forgotten or changed. An installation option prevents the use of data recovery tools on the disk. NightWatch II is ideal for both individual machines and site license environments.

Passport 3.0
Disk security utility
Macintosh Plus or larger; System 6.0.5 or later.

Passport provides a very secure password security system to assure the privacy and security of user's data. The program protects against all attempts to gain entry, even when starting with a System floppy or holding down the Shift key. Access is permitted only through a password. Passwords can be up to 28 characters long, and Passport allows for both System administrator and user password. At shutdown or restart, the disk is locked and can only be unlocked with the correct password. After three unsuccessful attempts, an alarm is sounded. Passport maintains an audit trail file with the date, time and attempted password (if it was wrong) used. Following an unauthorized attempt. Passport alerts the user that an attempt to gain access was made. Passport also includes an integrated screen saver/screen locker that gets activated after a user-selected timeout period or immediately through a user-selected "hot-key." Moving the mouse or typing will again prompt the user for the password to gain access. Passport can also be setup to eject any floppy inserted in the protected machine, to prevent theft of programs and/or the spread of viruses from infected floppies. Passport allows for background processing. It is also ideal for PowerBook users.

Safety Suite
Integrated file protection and security utilities
Macintosh Plus or larger; 1 MB of RAM; System 7.0 or later.

Safety Suite not only provides easy access to a powerful suite of utilities, it also provides a unique combination of utilities in one integrated package, including: Password Protection (provided at both the hard drive and file level), Auto Backup (automatically backs up files while computer is idle), Anti-Virus Protection (provides virus protection via John Norstad's Disinfectant), Crash Protection (protects work in progress with auto backup and keystroke recording), Disk Locker (password protects entire hard drive), Undelete (instantly recovers mistakenly-trashed files), Encryptor (secures sensitive files by encoding their contents), Screen Privacy (shields screen and sensitive files from prying eyes), Shredder (writes over specified files to prevent unwanted recovery), What Happened (provides audit trail of computer activity), Wallet (safely stores personal information), Who's There (keeps a log that monitors and notifies users of who's accessing computer over the network) and Dog Tag (uniquely identifies computer in case it is lost or stolen with an unremovable tag line on the bottom of the desktop). Safety Suite operates as unobtrusively as possible, offering flexibility and customization throughout its feature set to meet the varying workstyles and security needs of customers.

SecretAgent
Encryption utility
Macintosh II family; 2 MB of RAM.

SecretAgent is a menu-driven public-key encryption utility that combines the Data Encryption Standard (DES) with the ElGamal Public-Key Cryptosystem and the N.I.S.T. Digital Signature Algorithm (DSA). It provides virtually unbreakable security for sensitive word processing documents, spreadsheets, databases, e-mail, fax transmissions and telex transmissions. Additional features include: digital signatures, message authentication, ASCII conversion, data compression and file erasure utilities. Available formats include A/UX (requires A/UX 1.1.1 or later) and MacOS.

SecureInit
Security software
Macintosh 512KE or larger; System 6.0.5 or later.

SecureInit is made for the protection and automatic maintenance of Macintoshes that are used by more than one person. Features of SecureInit include: lock applications, hide System folder, lock System files, refresh System files, kill undeclared files, lock the disk(s) after use, verify applications, close all windows at startup, don't launch applications from undeclared volumes, don't copy applications to or from protected volumes, purge, erase empty folders, eject alien system disks, protect the configuration with a password and ask for a password at startup. Users may protect folders from being trashed. SecureInit includes screenlock password protection and start-up password protection, which prevents access even when the Macintosh is booted from a system diskette.

Security Force
Anti-theft software
Macintosh Plus or larger.

Security Force is software that protects hardware against theft. It is an INIT that installs quickly in the System folder of any Macintosh. When a user stops working for a preset number of minutes, or chooses Shut Down from the special menu, Security Force enters into protected mode. Once in protected mode, Security Force goes out and finds buddies on the network. (New buddies are dynamically assigned on the fly and can't be predicted.) The buddies let each other know specific information about themselves. This includes type of machine, serial numbers, memory size, peripherals attached, as well as the user's name, phone number, location and special notes. Once this preliminary information has been exchanged, the buddies keep an eye on each other by passing simple messages. When a user comes back to their desk, they simply touch the mouse, enter a password and go back to work. The buddies will say goodbye to each other. However, if the machine is stolen, the buddies will detect the theft and send an alarm to the guard station. The guard station is included in the purchase of Security Force and will run on any Macintosh. An audio alarm will sound at the guard station and the screen will flash up the details of the theft. Security Force can also be configured to send out a pager to a beeper.

SpyProof/Mac
Security software/encryption
Macintosh Plus or larger; 800K disk drive; System 6.0 or later.

SpyProof/Mac is an XTND filter that allows MacWrite II users to import and export sensitive documents in a DES-encrypted format. DES is the National Institute of Standards and Technology endorsed data encryption standard. DES has been widely used to protect sensitive documents by the federal government and banking community. SpyProof/Mac will also support any product containing the Claris XTND technology, such as MacDraw Pro, Claris CAD, etc.

Symantec AntiVirus For Macintosh (SAM) V3.0
Virus protection, detection and elimination
Macintosh 512KE or larger; System 6.0 or later; Finder 6.1 or later.

Symantec AntiVirus For Macintosh (SAM) is a virus protection, detection and repair program. It does more than stop every single Macintosh virus known today; it also seeks out anything even resembling virus-like behavior and stops it cold before it has a chance to corrupt data. It works against the common known viruses, such as nVir, Scores and ANTI, but also detects irregularities that occur on a system on the chance that they might be some unknown viral infection at work. Key features include: detection methods spot viruses before they have a chance to infect a system; the capability to scan any file, folder or volume at any time to determine if a virus is present; if a virus is detected, SAM makes it easy for a user to delete the file or repair it; optionally scans user-specified volumes and folders at system startup and shutdown; the option to automatically scan every floppy disk when it is inserted into the Macintosh; a wide range of options that let a user control the way the program operates; works on most networks just as it works on a dedicated machine; and more.

TIPEM
Toolkit for interoperable privacy-enhanced messaging
Macintosh Plus or larger.

TIPEM, RSA's Toolkit for Interoperable Privacy-Enhanced Messaging, allows programmers to develop secure, interoperable applications using today's best encryption and digital signature technology. TIPEM is designed for fast development of electronic mail, electronic forms or TCP/IP messaging applications that conform to PKCS, Internet PEM and X.400 '88 standards. TIPEM gives developers access to several useful crypto algorithms and constructs, such as RSA Digital Envelopes, DES or RC2 bulk encryption, and RSA Digital Signatures.

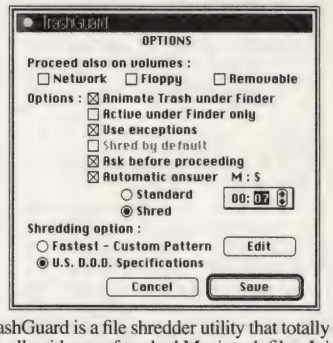
TrashGuard
File shredder utility
Macintosh Plus or larger; System 6.0.4 or later.



TrashGuard is a file shredder utility that totally obliterates all evidence of trashed Macintosh files. It is not System 7.0 dependent. TrashGuard further distinguishes itself with its "Intelligent Exceptions" feature. TrashGuard keeps confidential files from getting into the wrong hands. Once installed in the System folder, it can definitively destroy (shred) any file that a user puts in and empties from the Trash. When U.S. Department of Defense (DOD) specifications are selected, TrashGuard makes the three required passes over the "shredded" file — making recovery of any data impossible. Once the TrashGuard Control Panel has been set to administer general Trash controls, users can "train" TrashGuard to discriminate between the shredding of confidential files and the normal trashing of other files. For instance, all spreadsheet documents are shredded, all others are disposed of normally.

ultraSecure
Security software system; accelerated for Power Macintosh
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.2 or later.

ultraSecure is easy-to-use, fast, reliable and genuinely secure access management software. It provides four levels of protection for drives, applications, files and folders, including the System folder. It provides protection from access, modification, copying and deletion. The password is entered only once — at log on. It provides fast DES, double DES and proprietary encryption methods that are up to 200 times faster than other products. ultraSecure features guest access options; erasing/shredding to U.S. Government standards; anti-virus; idle time and screen "hot spot" screen saver and log off; idle time shut down/lock out; warning banner start-up window; activity logs include printer; unique PowerBook backlight battery saver, sleep-log off options; and is most compliant with Class C2 (DOD 5200.28-STD) for non-classified government use. Warning banner meets ASSIST bulletin 93-17.

ultraSecure With ultraCommand
Security software system; accelerated for Power Macintosh
Macintosh Plus or larger; 1 MB of RAM; System 6.0.2 or later.

ultraSecure with ultraCommand provides centralized administration of all networked Macintoshes protected with ultraSecure. Administrators view, change, retrieve and export security settings, features/options, audit/activity logs and failed-access/tamper logs. Security settings include user names, passwords and users/folder privileges. Administrators can also view, retrieve and export system configurations, including computer type, RAM amount, system software version and the name and version number of all applications, control panels and system extensions. Administrators can remotely update ultraSecure and all third-party software. Update commands can be scheduled for any time and targeted for individual Macintosh, Macintosh model(s), zone(s) or other group(s). It provides four levels of protection and all of the high-speed, easy-to-use features of ultraSecure.

ultraShield
Security software system; accelerated for Power Macintosh
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.2 or later.

ultraShield is an easy-to-use password access control, privacy system that reliably prevents tampering with PowerBook/Macintosh operation in the office, home and while traveling. It uses ultraSecure reliability and security technologies. It provides three levels of protection for drives, applications, files and folders, including the System Folder; and protection from access, modification, deletion and copying. It uses the fastest proprietary and DES encryption methods that are up to 200 times faster than other products. The password is entered only once — at log on. It features erasing/shredding to U.S. Government standards; anti-virus capability; idle time and screen "hot spots" screen saver and log off; idle time system shut down/lock out; warning banner start-up window; and extensive, exportable activity and tamper-attempt logs and unique PowerBook backlight battery saver and sleep-log off options. Exportable version is available.

Virex 5.0
Comprehensive anti-virus software: prevention, detection and treatment
Macintosh Plus or larger; System 6.0.5 or later.

Virex with breakthrough SpeedScan technology, provides fast and easy virus protection. SpeedScan is a patent-pending speed enhancement technology that enables Virex to scan for viruses in a fraction of the time it takes others. SpeedScan is incorporated into both the Virex application and the Virex INIT. As a result, all aspects of virus protection are substantially faster, including virus scanning, launch scanning, diskette scans and startup scans. Virex is a comprehensive solution that detects and repairs viruses, and protects against every known virus and unknown viruses as well. The Virex INIT protects the computer from infection by automatically screening every file and diskette that is used. As new viruses are discovered, Datawatch publishes virus codes that allow instant updating. Virus codes are available through the telephone Help Hotline, the DataGate bulletin board and online services. Updates are also available on diskette individually, or as part of the one-year Virex Protection Service.

■ **Virex Administrator**
Anti-virus for networks
Macintosh Plus or larger; System 6.0.5 or later.

Virex Administrator is an anti-virus solution for Macintosh networks. With individual copies of Virex installed on networked Macintoshes and Virex Administrator installed on the network manager's Macintosh, users can initiate virus scans across the entire network, in real time or on a schedule; remotely install and update Virex; be immediately alerted to virus attacks anywhere on the network; repair viruses remotely; and maintain an audit trail of all scans, updates, virus detections and virus repairs. Virex Administrator delivers ultimate security with unprecedented ease by giving the network manager an unprecedented level of control and the tools needed to maintain a virus-free site. It also saves time and money by eliminating the manual installation and updating process each time Virex is updated to combat new viruses.

Utilities/Other

■ **"MacWrite" Launches MacWrite II**
MacWrite II is launched instead of MacWrite
Macintosh Plus or larger; MacWrite II; System 7.0 or later.

This application is a MacWrite replacement to be used if MacWrite does not perform up to users' expectations. This replacement program simply launches MacWrite II. Users double-click on a MacWrite document and MacWrite II is launched; users then open the MacWrite file they wish to read from MacWrite II. It keeps MacWrite from being inadvertantly launched while keeping MacWrite file icons intact on the desktop even though the original MacWrite application has been replaced. It is Power Macintosh compatible.

Esoteric Software; PO Box 744; Falls Church, VA 22040; 703-532-6981 or 800-217-5051 (orders)

1stPort-II
File conversion program
Macintosh Plus or larger; 1 MB of RAM.

1stPort-II is a datafile and spreadsheet reformatter used to convert and reformat almost any datafile from almost any source, formatted or unformatted: mainframes, minis, PCs, Macintoshes, bar codes, electronic scales, data acquisition devices, etc. 1stPort-II contains the unique "movable column boundary screen" that can create or change field boundaries in formatted or unformatted file structure. Conversions supported include DIF, SYLK, Flat, tab-delimited, comma delimited, 1stDESK and user-defined custom formats. Field renaming and definition of type and length make unique use of the Macintosh's graphics capability. 1stPort-II also contains MacroAccess to automate commands defined by users as icons at the Finder and linked together to trigger repetitive steps. 1stPort-II is System 6 and 7 compatible.

7th Heaven Utilities 2.5
Performance and color applications that enhance System 7
Macintosh SE/30 or larger; hard disk drive; color recommended; System 7.

The 7th Heaven Utilities are a collection of seven performance and color applications that enhance or expand System 7. FinderExpress speeds up Finder file copy operations by as much as 340 percent. FileMapper changes the system file map to allow orphaned files to launch any application. RedAlert installs color icons in place of the default black and white Stop, Caution and Message Alerts. Chameleon is a desktop background enhancement that permits users to import custom desktop backgrounds or install one of the more than 200 included patterns. Informant reports all aspects of system software and computer hardware. Calendar is a desktop calendar with graphics. VectorPlasma is a background task aware screen saver.

Adobe Type Reunion
PostScript font utility
Macintosh Plus or larger, including Portable.

Adobe Type Reunion is an easy-to-use utility for PostScript fonts. It alphabetizes a user's menu and groups families so that different styles of the same typeface appear together in a submenu under the same family name. Adobe Type Reunion reduces the length of a typical font menu by 75 to 80 percent, and provides

instant accessibility to every font available on a user's Macintosh.

■ Allright Enhancements
System enhancements
Macintosh Plus or larger; System 7.0 or later.
Allright is a collection of nine system enhancements in one smartly integrated package. Balloons gives users instant access to Balloon Help where and when they need it. Copies allows users to copy files and folders in the background while they continue working. It also provides scheduling and filtering capabilities that make it an easy-to-use backup program. Directories gives users the ability to quickly find and open the files they use most. Extensions helps manage System extensions. Keys provides a simple way to automate repetitive tasks. Menus allows users to customize their Apple menu and to change the fonts and sizes of menu titles and menu items. Notes is a digital version of the familiar sticky notes. Printers provides easy access to printers without opening the Chooser. Sounds allows users to assign meaningful sound to different events.

Animals
Cache memory management system
Macintosh Quadra.
Animals is a cache memory management system for users of Macintosh Quadra 700, 900 and 950 computers. At the heart of the Quadra series is the 68040 CPU from Motorola. Many third-party applications, shareware, desk accessories and INITs will not run on the Quadra (or other 68040-based platforms) with the caches enabled. To run these applications, users manually disable the cache in the control panel and re-boot. Animals transparently manages the Quadra cache in the background. No re-booting is necessary as Animals automatically matches compatible cache modes with applications, minimizing user interruptions. Animals provides three caching options: Copyback ('040 optimized), Writethrough ('030 optimized) and None.

Apple Personal Diagnostics
Comprehensive and easy-to-use diagnostic software
Macintosh Plus or larger; 2 MB of RAM; hard disk drive and floppy disk drive; System 6.0.7 or later.
Apple Personal Diagnostics allows Macintosh users to test their system hardware and software to keep their computer working trouble-free. It is designed to reduce system downtime, minimize support calls, offer trouble-shooting tips and help users identify the source of problems. The software combines hardware testing and system software checking in one easy-to-use package, giving users a wealth of information about their computers with a click of the mouse.

At Ease
Alternative to the standard Finder desktop; strengthens Macintosh appeal for home and education
Macintosh Classic or larger; 2 MB of RAM (4 MB recommended); System 7.0 or later.
At Ease is software that makes it easier for users of Macintosh personal computers to share them with children, students and novice users. An extension to the System 7 operating software, At Ease simplifies the tasks of launching applications and opening files, while providing simple protection for system settings, files and folders. An alternative to the standard Finder desktop, At Ease comprises a Documents folder and an Applications folder. Both folders feature large, single-click buttons that make it easier to launch applications and open documents. All documents created by a user are automatically displayed in the Documents folder, regardless of where they are stored. The primary user of the computer indicates during setup which applications and system controls will be displayed in the Applications folder. While At Ease is running, a user cannot move, rename or delete documents or applications. At Ease includes Mouse Practice, an application that teaches novices how to use a mouse; a quick reference card; and setup documentation.

Atticus RAMDiskSaver
Allows users to shut down their computer while keeping their RAM disk completely intact
Macintosh Plus or larger; System 7.0 or later.
Atticus RAMDiskSaver allows users to shut down their computer while keeping their RAM disk completely intact. Once users start their computer up again, their RAM disk will appear exactly as they left it. In essence, the RAM disk acts just like a hard drive. Atticus RAMDiskSaver has other features, including background operation, the ability to perform automatic backups of the RAM disk at periodic intervals, control panel interface, file synchronization between files located on the RAM disk and the hard drive files, the option of making the RAM disk the start-up volume, the ability to restore the RAM disk anytime and more.
$69.95 retail
Atticus Software Corp.; 456 Glenbrook Rd.; Stamford, CT 06906; 203-348-6100 or 203-964-8271 (fax)

Atticus Vista
Quickly search all disks, regardless of where they are
Macintosh Plus or larger; System 7.0 or later.
Atticus Vista expands users' desktops by allowing them to keep a copy of the directories found on their diskettes, CDs, cartridges, flopticals and more within a single folder. Whenever a disk is inserted, Atticus Vista automatically scans and records an identical copy of the disk's desktop. Even after the disk is removed, users have the ability to search through their disk's directory, just as if it were still in their computer. Users can even launch files from their Vista. Atticus Vista has other features, including background operation, complete control over scanning, compressed directory storage, label printing of disk's contents, control panel and application interface, the ability to scan for hidden files, aliases and compressed files, manual addition of volumes to the Vista and more.
$69.95 retail

AudioClips — Personal Multimedia Utilities
Allows users to play their favorite sounds from movies and television shows as they work
Macintosh Plus or larger.
AudioClips feature actual dialog, sound effects and music cues from classic and contemporary TV shows and films. Enclosed is a user-friendly utility that allows users to assign the clips to system events, such as startup, shutdown, disk insert, various keystrokes and much more. The sounds can also be used with popular multimedia applications for private use. Seven volumes include The Logical Collection & The Final Frontier (original Star Trek); Encounter At Farpoint, The Best of Both Worlds & Virtual Data (Star Trek: The Next Generation); Star Wars; and 2001: A Space Odyssey. Coming soon: Terminator 2 and The Empire Strikes Back and Return of the Jedi.
$59.95 each retail
Sound Source Unlimited, Inc.; 2985 E. Hillcrest Dr., Ste. A; Westlake Village, CA 91362; 805-494-9996 or 805-495-0016 (fax)

AutoSave II V2.0
Saves work in progress using a preset time interval
Macintosh 512KE or larger.
AutoSave II is an INIT that automatically saves work in progress using a preset time interval. The save interval may be set from one to 999 minutes. Individual applications can have their own AutoSave commands (time intervals, save command keys, etc.). Programs that don't need a save command can have AutoSaves excluded from them. If users are not certain that they want to save their changes, AutoSave can periodically ask if they want their work saved. Or, AutoSave can be easily turned off or "put to sleep" until the next time users boot. AutoSave II is System 7 compatible.

Bar Code Pro
Application that creates EPS or PICT graphics
Macintosh Plus or larger; 1 MB of RAM; printer.
Bar Code Pro makes bar codes as PICT or EPS graphic files (it does not use or require fonts) in any of the 16 major international bar code symbologies worldwide — UPC versions A&E, Postnet/FIM. Code 39, Code 128, Codabar, ITF/ITF-14/Code 25. EANISBN/ISSN, MSI/PLessey and Pharmacode. Full control over image aspects including size, rotation, color, Bar Width Reduction, image scaling to printer's resolution and more is allowed. Cut down versions "speaking" only one or two of the above symbologies are available for a reduced price. Images are saved to disk and printed from any other application that will accept graphics and print. It is also available as an Aldus Addition to PageMaker and in a Quark XTension version for use directly inside of QuarkXPress. It is System 7 or 7.1 and Power Macintosh compatible.

Bliss Saver
Screen saver
Macintosh Plus or larger; 256 colors (8-bit) video recommended.
Bliss Saver is a screen saver that prevents screen burn-in. It displays abstract animated paintings with colors that melt and flow using real-time color syntheses. More than 130 paintings are included, and more paintings can be created with the companion product Bliss Paint. With the keyboard, users can control the innovative color synthesizer to create their

These Products Available Through Bottom Line Distribution
1-800-347-1923

own sequences of dynamic, flowing color. Sound input and MIDI may be used to control Bliss Saver. Options include Delay Time and Activate and Don't Activate Corners. Password protection is available to keep out unwanted users. The animated paintings are stored in an extremely compact format and total disk space used is about 600K. Pictures may be saved as PICT files for slide shows and touch-up in other applications.

Bloopers
A dozen goofs, gags and practical jokes for the Macintosh
Macintosh Plus or larger; System 7.0 or later.
Bloopers is a dozen goofs, gags and practical jokes for the Macintosh. Included are: Typewriter (Macintosh makes typewriter-click sounds when keys are pushed); Farm Animals (chickens, horses, pigs, cows, etc., periodically pop out from behind windows, moo, neigh, oink, etc., and then vanish; Watcher (eyeballs in the menu bar track the motion of the cursor); Cuckoo Clock (digital clock in the menu bar that turns into an animated cuckoo and chimes on the hour); Drip (Macintosh drips continuously); Funny Message (a dialog pops up at a specified time with a funny message); Ghost Writer (causes funny messages to magically appear in a word processing document); Mistype (the character typed is never the character seen); Wandering Mouse (cursor drifts around when not moved); Molasses (slows the Macintosh to a crawl); Time Warp (makes clock run faster or slower than usual); and more.

The Blue Parrot
Laser printer queue software for smooth, efficient management of printer output
Any Macintosh; print spooler.
In a network environment using a shared laser printer, users often collide when sending documents to be printed. When two or more users send manual-feed documents to a printer, they have no way of knowing in what order their documents will be printed because they have no information as to queue output order. Using the Blue Parrot eliminates this common bottleneck on an AppleTalk network. The Blue Parrot is a control panel device that displays a list of documents queued to a specified printer. The Blue Parrot provides the Owner (User) Name, Document Name, Number of Copies, Number of Pages and Type of Feed (manual or paper tray). Users can see the queue order of jobs waiting to be printed on a particular laser printer. Users can cycle through all the printers in a zone to find the least-busy one.

Calc+
Professional calculator with decimal and DTP features
Any Macintosh; System 6.0 or later.
Calc+ is a next generation calculator for the Macintosh, with powerful decimal and desktop publishing functions. It is fast, easy to use and has all the features of a professional desktop calculator: multiline resizable display, paper tape, fast operation from the Macintosh's numeric keypad or regular keyboard and more. Calc+ is really two calculators in one, because it can also perform desktop publishing calculations in inches, centimeters, picas and ciceros, plus instant conversions between any of these units. Calc+ is a major upgrade to the standard Macintosh calculator, and is ideal for spreadsheet users and desktop publishers. Calc+ is System 7 compatible.

CalcuPad
Flexible calculation pad
Macintosh Plus or larger; System 6.0.4 or later.
CalcuPad is a calculation pad that supersedes conventional calculators by using the metaphor of a note pad designed for computations. With CalcuPad, users will be able to save time by setting up calculations with variables and comments so that they can document and reuse their calculations. If users would like to alter the appearance of their calculations, they can customize the symbols any way they want, or they can even use the C programming language conventions. CalcuPad features 63 functions and operations, saving calculations as text files and back tracing through the calculations to find errors. It includes a 15-page manual.

CanOpener 2.5
Information search and retrieval
Any Macintosh; System 6.0 or later.
CanOpener allows users to open almost any Macintosh file, search the contents for text, pictures and sounds, then copy and paste anything they need. It is ideal for reading those pesky documents the Macintosh can't open or retrieving information from damaged files. CanOpener will also search disks, hard drives and networks to locate missing information, and now supports QuickTime movies. It comes as both a desk accessory and application. CanOpener is System 7 compatible.

■ CD AutoCache
Caches both directory and data information from CDs
Macintosh Plus or larger; 2 MB of RAM; System 6.0 or later.
CD AutoCache is an advanced CD-ROM acceleration/caching software program. CD AutoCache automatically caches both directory and data information from CDs, speeding seeks, searches, opening of files and overall data throughput. CD AutoCache has a proprietary new artificial intelligence algorithm built in that automatically optimizes both the total cache and cache page sizes, depending on how a CD has been mastered, leaving the CD-ROM drive running at its optimum level at all times. CD AutoCache includes a suite of performance tests that let users evaluate speed increases found using CD AutoCache's different routines. CD AutoCache supports virtually all CD-ROM drives on the market and is Photo CD compatible. CD AutoCache comes complete with an audio desk accessory that allows users to name and save individual CD-ROM titles and tracks to hard disk. The audio DA also allows users to create a custom playlist of their favorite songs. CD AutoCache lets users capture digital audio to their hard disk, and is Power Macintosh compatible.

CD-Gen for Mac
Premastering Software
Macintosh II or larger; 1 MB of RAM; System 7.0 or later.
CD-Gen for Mac's simple-to-use interface means that in-house CD-ROM production just became a lot easier. CD-Gen for Mac is available for use with Philips CDD521, Kodak PCD-200, Plasmon RF-4000 and Ricoh RS-9200 CD Recordable drives. CD-Gen for Mac supports both ISO 9960 and Hierarchical File System (HFS) CD-ROM file standards. While the ISO 9660 file format is suited for cross-platform CD-ROMs, CD-Gen for Mac allows users to violate ISO file name rules to build an application more appropriate for the Mac environment. Multimedia developers will like CD-Gen for Mac's ability to create a mixed-mode disc, which contains any file structure on the first track and CD-quality audio in the remaining tracks. CD-Gen for Mac's unique dual-speed feature accommodates most Mac CPUs because users can write to a CD-R at single or double speed depending on system throughput.

CD-ROM ToolKit 1.1
Increases CD-ROM performance, adds Photo CD support and provides a sophisticated audio playback DA
Macintosh Plus or larger.
The CD-ROM ToolKit is a software utility that can increase CD-ROM drive performance by up to 1,800 percent. It supports Kodak's Photo CD and comes with a Desk Accessory that allows users to control audio CD functions. CD-ROM ToolKit works in the background to make CD-ROM drives perform faster and more reliably. By caching and prefetching repeatedly used information to the Macintosh's hard drive and RAM, CD-ROM ToolKit allows searches to take place almost instantaneously, dramatically improving drive productivity. CD-ROM ToolKit's robust device driver allows almost every CD-ROM drive to read single session Photo CD discs. FWB's software also provides complete support for Apple HFS, High Sierra, ISO 9660, ProDOS and MS-DOS discs. CD-ROM ToolKit includes "custom-tuned" support for all popular drives from Toshiba, Sony, Chinon, Pioneer, Apple, NEC and Phillips, plus multispeed, multisession and multiplatter devices. CD-ROM ToolKit's convenient Desk Accessory allows any drive equipped with audio output jacks to play audio CDs with complete playback control, including advanced features, such as fast forward, shuffle and programmable playback order.

ClickChange 2.1 And ClickTrax 2.0
Lets users personalize the look and feel of their Macintoshes
Macintosh Plus or larger; System 6.0.7 or later.
ClickChange is an INIT/Control Panel device that allows users to tailor the appearance of their Macintosh. Custom color schemes accompany a user's choice of button, window, background patterns, menu icons and scrollbar styles. Drab old cursors are replaced with exciting, animated, color alternatives. The Macintosh responds with exotic sounds when and where a user chooses.
ClickTrax includes more than 4 MB of hilarious celebrity impersonation sound clips. Hollywood funnyman Steve Kaminski has adapted his stand-up comedy routine to the Macintosh environment. Steve's "King" croons as the Macintosh restarts, President Reagan tries to recall the time and Groucho insults a user's every beep. All of Steve's original send-ups are high-quality recordings, mixed with lots of realistic special effects.

ClickPaste 2.1
Intelligent Scrapbook
Macintosh Plus or larger; System 6.0 or later.
ClickPaste provides a simple, convenient way to store and retrieve frequently used text, graphics and other objects. With a key press and a click of the mouse, ClickPaste can save almost anything, including text, any type of graphics and HyperCard buttons and scripts. ClickPaste stores these objects in files and folders that can be reorganized through the Finder. To paste a saved object, users perform the same simple command they did to paste to ClickPaste, and then choose their object from the pop-up hierarchical menu that appears and displays it in a balloon view. ClickPaste can be used anytime, anywhere and in any application.

CloneMaster
Disk duplicator/serializer
Macintosh Plus or larger; System 6.0.5 or later.
CloneMaster, a diskette duplication program on steroids, allows developers to automatically assign unique serial numbers to applications as they are being duplicated, as well as selectively serializing all of the applications on a diskette to the same serial number. CloneMaster also maintains duplication and serialization information for future duplication sessions. The program is capable of storing the serial information for any number of master diskettes and allows users to export a text file of the next serial numbers to be used. This file can then be used to print labels for attachment to diskettes or to the exterior of software packages and registration cards. An online help facility is included with the application. Help screens show the use of each CloneMaster control with a brief explanation where appropriate. For compatibility, CloneMaster reads DiskCopy image files and reads and saves image files in its own proprietary format, providing developers with a method of quickly preparing duplication sessions. Though it is virtually impossible for someone to successfully tamper with the serialization resources attached to an application by CloneMaster, the program's method of incrementing serial numbers provides the developer with an opportunity to further validate an application's serial number if needed. Developers can test the serial string to determine if anyone has attempted to tamper with the serial number.

Color Convert
Low-end color printing solution
Macintosh II.
Color Convert provides Macintosh II users with the capability to print color images on an ImageWriter II using a four-color ribbon. The graphic may be 8- or 24-bit color, which becomes converted to the basic 8 color model, which is supported by several low-cost printers. Color Convert will read and print PICT files, or can print graphics images directly off the screen while in MultiFinder. Converted images are saved as PICT documents and may be imported into other desktop publishing software.

■ **ColorQuartet ScanFlow Server**
Multidrum scanner server
Macintosh II or larger; 2 MB of RAM; System 7.0 or later; ColorQuartet 3.0.
ScanFlow Server is a ColorQuartet option designed to support a high-throughput, multidrum scanning environment. With ScanFlow Server software, the ScanMate 5000 scanner is kept in continuous operation. Multiple drums can be mounted and previewed. Previews are stored by each drum's bar-code ID. In a single station setup, the user calls up one preview, crops and sets scanning parameters and sends the job to the scanning queue. While the first scanning job is underway in the background, the user then retrieves a second preview and repeats the setup steps. In a multistation environment, the previews can be accessed by any computer on the network, allowing additional operators to work on the files. ScanFlow Server software even allows users to interrupt the scanning queue, make a scan from another drum and resume scanning of the first.

The Compatibility INIT
System enhancement
Macintosh Quadra or Centris.
The Compatibility INIT is a Macintosh system enhancement for Macintosh Quadra and Centris computers that makes them completely and transparently compatible with software that cannot currently run with the 68040 cache turned on. Unlike the cache control panel that ships with the Quadras, the Compatibility INIT is fully automatic and does not require users to reboot to change the cache settings. The Compatibility INIT works by recognizing incompatible software as it is launched and using the 68040 MMU to conveniently eliminate incompatibilities and minimize performance sacrifices.

Conflict Catcher II
Startup software manager and problem solver
Macintosh Plus or larger; System 6.0.5 or later.
Conflict Catcher puts users in charge of managing their startup software. It locates single and multiple conflicts between startup files; finds actual problems with a system (does not rely on a limited database that constantly needs updating); and solves startup software conflicts that may not show themselves only at startup time (they can manifest themselves anytime). Features include: creates sets of software files that are commonly used together, allowing better use of memory; creates three kinds of linked software (group links, incompatible links, forced order links) and imports and exports links; creates detailed system reports, including RAM requested and used by extensions, which may be printed; moves fonts in and out of the System 7.1 folder, freeing up more memory; works over AppleTalk networks (loads aliased startup files over a network); and more.

Connectix Desktop Utilities 1.0.4
Enhance productivity and convenience
Macintosh SE or larger; System 7.0 or later.
Connectix Desktop Utilities (CDU) is a collection of 16 powerful utilities for enhancing productivity and convenience. CDU supports federal guidelines on personal computing power conservation and is an Energy Star compliant controlling device. CDU protects sensitive data. Whenever the Mac is unattended, all files are secure, whether the Mac is on or off. CDU lets users customize the look of the Mac's windows, menu and controls with a variety of color-coordinated schemes. Users can place any pictures as the desktop image. CDU lets users easily synchronize files between any disks. Plus, CDU comes with a "quick set-up" mode so users can customize all of CDU's great enhancements at a glance. It features custom menu bar displays, screen saver, keyboard shortcuts, cursor finder, mouseless menu control and more to make a Macintosh more effective.

Copyright
Replaces the Finder's copy function
Macintosh Classic or larger; System 7.0 or later.
Copyright is a transparent utility that completely replaces the Finder's copy function, enabling users to copy files and folders in the background, and still perform all Finder functions. In addition to freeing the Finder during copies, Copyright permits users to simultaneously copy multiple files to multiple destinations.
Copyright Pro has the same functionality as Copyright, but it also allows users to schedule copies at specific times, repeat copies at designated intervals, automatically mount volumes and filter the files being copied. Users can schedule pending copies hourly, daily, weekly or at predetermined intervals. Users can filter the files being copied by name, type, creator, size, modification date, creation date, etc. Copyright Pro also gives users the option of replacing, duplicating or merging copies with older copies.

CorelSCSI For Macintosh
Complete optical disk and CD-ROM device driver solution
Macintosh SE or larger; 1 MB of RAM (2 MB with System 7); System 6.0.5 or later.

CorelSCSI for Macintosh supports optical drives — WORM, rewritable, multifunction and CD-ROM — from virtually every manufacturer. A single INIT supports all certified devices. Using CorelSCSI, optical cartridges appear as standard HFS volumes. Supporting both single and multisession drives, CorelSCSI reads a variety of CD-ROM formats, including Mac High Sierra, ISO-9660 and CD Digital Audio. Additional utilities are also provided for initializing, configuring, mounting and testing media. As a bonus to the SCSI utilities, CorelSCSI also includes a full-featured CD-Audio player for listening to audio CDs and a visual file manager for organizing, managing and manipulating graphic files.

Casady & Greene, Inc.; 22734 Portola Dr.; Salinas, CA 93908; 408-484-9228, 800-359-4920 or 408-484-9218 (fax)

Cron Manager 1.0.3
Chronological event management utility
Macintosh Plus or larger; 1 MB of RAM; System 7.0 or later; hard disk drive recommended.

Cron Manager implements the Unix Cron facility. It opens any Macintosh file on a given date and time. By creating an alias, renaming it to the date and time to open, and moving it into the Cron Events Folder, Cron Manager opens it at that date and time. Cron Manager also supports wildcards, day names, repeating intervals and time increments from startup. Cron Manager is a control panel that creates the special Cron Events Folder inside the System Folder. It works like the Startup Items, only smarter. It is completely transparent to the user and works with any Macintosh file. Cron Manager can open any file that a user can open.

Crypta
System for locking and unlocking software dispatched using distribution media
Macintosh Plus or larger; System 7.0 or later.

Crypta is a system for locking and unlocking software dispatched using distribution media like CD-ROMs, floppy disks or mailboxes. Crypta is capable of creating a crypted archive of files or folders. A crypted version acts like a self-extracting archive known from data compression tools and is called SDI (Self Decrypting Image). After starting an SDI, a "Transport Key" is presented to the user. This transport key has to be transmitted to the producer of the SCI (the software distributor), who can generate the unlock key corresponding with the transport key. The transport key is generated using the first application launch time and different characteristics of the customers Macintosh, e.g., RAM capacity, system version, monitor sizes. This ensures different transport keys for every customer although they use the same SDI. Crypta is a complete system for creating SDIs, generating unlock codes, protocolling sales, obtaining sales statistics, etc. It's available as a single application for small software producers, as well as network-oriented multiuser systems for distributors. Easy integration into existing systems is ensured by AppleScript support. Sample front ends are available for FileMaker Pro 2.x.

The Deal
Productivity extensions
Macintosh Plus or larger; System 6.0.7 or later.

The Deal is a suite of 10 independent productivity extensions that increase a user's control over the Macintosh in various ways. RoboType is an auto-glossary that watches a user type and substitutes words, phrases or symbols from a list a user defines. With Pick A Letter, a user selects any character from any installed font and Pick A Letter "types" it in. DST Minder adjusts a user's Macintosh clock for Daylight Savings Time (DST), and back again, automatically. When a user loses the cursor and wiggles the mouse, BullsEye sees the wiggle and flashes a large bulls-eye pattern around the cursor. Mouse Gears lets a user set the mouse speed by a pop-up menu instead of the mouse control panel. It also remembers the settings for each application and switches automatically. With Monitors Minder, a user chooses the screen depth once for each application, using the convenient menu, and Monitors Menu switches automatically as a user changes applications. Sleep Now! is a pop-up that lets a user Sleep their Macintosh now. Other extensions include Diamond Menu, Pop Holder and Mouse Gears Pro.

DeskToppers
Calendar, Little Black Book, Doodle Pad, Music Maker, Scrapbook Library
Any Macintosh.

DeskToppers is a set of five practical desk accessories for the Macintosh. It includes a Calendar, which displays any month of any year from 1904 to 2003, can be used as a complete datebook or have its contents printed out; Little Black Book, which maintains up to 26 pages of names and addresses with a complete search-and-replace function and phone dialer for use with a modem; Doodle Pad, which lets users sketch and save drawings in MacWrite documents; Music Maker, a keyboard featuring four instruments on which users can play back and record music; and Scrapbook Library, which allows users to organize scrapbook files by dividing them into smaller scrapbook files without ever returning to the desktop.

Disk Finder 1.0
Disk cataloging program
Macintosh Plus or larger.

Disk Finder is a disk cataloging program for the Macintosh. It can catalog a floppy disk (or hard disk) in seconds. Disk Finder can be used to find any file instantaneously, and prints file catalog or disk labels when desired.
$49 retail
Enterprise Software; 12943 Andy Dr.; Cerritos, CA 90701; 310-809-7184

Disk Ranger V4.9.3; Ranger Reader; Disk Ranger INIT
Hard disk and floppy utilities, including disk cataloging and labeling
Macintosh Plus or larger.

Disk Ranger (System 7 compatible), Ranger Reader and Disk Ranger INIT provide a complete system for cataloging and labeling disks and finding lost files. They include routines for optimizing hard drives, editing files on disk, encoding/decoding files and new ways of removing or renaming files.

Disk Ranger catalogs hard disks and floppies. Catalog features include: full path names for files; sort disks/files by name, date, size, etc.; filter out unwanted files; add or delete disks or files from catalog; save catalog as text for use in other programs; and make labels directly from catalog entries. It will catalog the contents of Stuffit and Compact Pro files.

Ranger Reader is a desk accessory that will find files on a disk or search through a Disk Ranger catalog. This allows a user to keep a master catalog and quickly find any file on any disk in an entire collection. If Ranger Reader finds a file on disk, the next time a user chooses "Open," the dialog will show the correct folder for opening the file just found.

Disk Ranger INIT automatically updates users' catalogs as they use their disks. It works with floppies and hard drives.
$59.95 retail; includes all three programs
Graham Software Co.; 8609 Ingalls Cir.; Arvada, CO 80003; 303-422-0757

DiskDoubler
File compression utility
Macintosh Plus or larger; System 6.0.4 or later.

DiskDoubler is a powerful file compression utility that makes disk drives more efficient by increasing a disk's storage capacity by two or more times. Convenient to use, DiskDoubler lets users select any file or folder on the desktop, compressing it in seconds to take up less space. Once a file is compressed, it can be used as normal. Double-clicking on a compressed file will open it. Any application can open a compressed file, just as if it weren't compressed. DiskDoubler even remembers which files have been opened and recompresses them when a user is done. DiskDoubler's safe file processing scheme insures that files will not be damaged. By using a unique method of backing up files during processing, the likelihood of damaging a file is reduced to zero — even if power loss should occur during compression or expansion.

Symantec Corp.; 10201 Torre Ave.; Cupertino, CA 95014; 800-441-7234 or 800-626-8847 in CA

DiskMaster
Master, duplicate and serialize disks simply and quickly
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later.

DiskMaster is a complete disk duplicating tool. It is the one program that accomplishes mastering, duplicating and serializing. With DiskMaster, users read, write and mount Disk Copy compatible image files and eliminate many of the steps associated with mastering and duplicating floppies. Users create a master disk image on a RAM disk instead of a floppy disk. Files can be copied and changes made to a master disk hundreds of times faster than working with a floppy.
DiskMaster's serialization modules allow users to give each of the floppies a unique serial number by adding a resource, modifying an existing resource or by writing into the data fork.

Digital Eclipse Software, Inc.; 5515 Doyle St., Ste. 1; Emeryville, CA 94608; 510-547-6101, 800-289-3374 or 510-547-6104 (fax)

DiskTop 4.5
Desk accessories; application program
Macintosh Plus or larger.

DiskTop is a desk accessory that allows a user to find, list, delete, rename, copy, move, size, launch or set attributes of files on any disk without leaving the current application. It also lets users create aliases (under System 7), make new folders, restart or shut down. It also includes DT Launch for launching files and documents. DiskTop has a powerful "find" feature that allows users to search multiple drives to locate files that match certain criteria; including file name, file type, file creator, date created (or a range of dates), date modified (or a range of dates) or a range of file sizes. Users can add often used folders to a special "Jump-to" submenu and quickly view the contents of the folder by selecting its name — even though the folder may be nested several layers deep on a different drive.

The Disney Collection Screen Saver
Screen saver
Macintosh Plus or larger; 4 MB of RAM; System 6.0.4 or later.

Users can share the magic of The Disney Collection Screen Saver with Mickey Mouse and all of his friends. Users can watch and listen as some of their favorite Disney characters from films like The Little Mermaid, Beauty and the Beast, 101 Dalmatians, The Jungle Book, Fantasia, Peter Pan, Pinocchio, Alice in Wonderland and many others help protect their monitor. With more than 15 different modules to choose from, this complete screen saver prevents phosphor burn-in by animating the display and preventing static pictures or text from leaving permanent images on their screen. This stand-alone package will also run After Dark 2.0 or later, as well as all other Berkeley Systems screen savers. It includes standard After Dark features, such as SystemIQ. Users can also protect their privacy by using the built-in password feature, which prevents unauthorized access.
$49.95 retail
Berkeley Systems, Inc.; 2095 Rose St.; Berkeley, CA 94709; 510-540-5535, 800-877-5535 or 510-540-5115 (fax)

DragInstall
Installer program
Macintosh Plus or larger.

DragInstall is a customizable installer program that allows developers to create easy-to-use installers for their software. These installers provide end users with a click-and-drag interface and on-screen help to make installation as easy as possible. Developers set up their installers using the DragInstall Builder application. This Builder gives developers complete control over placement of files and folders and allows optional installation of files and folders based on system attributes. The Builder compresses files into segments that fill available space on each disk, reducing the number of disks needed. Multiple disks are handled automatically. The Builder allows grouping of files and folders into recommended and other installations. Installations can put files directly into the System folder and System 7 special folders and can optionally restart a user's Macintosh. External routines can also be called during an installation to provide additional capabilities.

DriveCD
Maximize CD-ROM drive performance with intelligent caching
Macintosh Plus or larger; System 6.0 or later.

DriveCD delivers maximized CD-ROM performance with intelligent caching for virtually all popular CD-ROM drives, full support for SCSI-2, multisession Photo CDs and Macintosh SCSI Manager 4.3. The CDEV displays SCSI bus information for target ID and logical unit numbers, mechanism type and volume names. The AudioCD application controls multiple audio CDs and CD-ROM drives simultaneously. Cache Control allows users to enable two levels of advanced caching techniques, which actually learn user actions. Another unique and powerful feature of DriveCD is its ability to disable Apple's System cache to eliminate redundant caching. DriveCD does not require users to restart to optimize the caching process for different CDs, nor does it consume large amounts of hard drive space. There is also no need to pre-set or teach the program which CD or application users use.

DriveTech
Floppy drive testing and maintenance program
Macintosh Plus or larger; System 6.0.7 or later.

DriveTech is a Macintosh floppy drive diagnostic program that checks every track and sector position of the floppy disk drive by employing certified test diskettes that verify the drive's read and write accuracy. DriveTech also offers an advanced head cleaning routine that utilizes the 3M Head Cleaning Diskette Kit (included), the only floppy drive cleaning system approved by Apple Computer, Inc. Data loss, errors and general drive failure can often be attributed to microscopic dirt, dust or other foreign particles on the read/write heads. The risk of drive failure can be reduced by using the DriveTech cleaning and testing system.

DupLocator 1.0.3
File/disk manager specializing in locating duplicate files
Macintosh 512KE or larger; System 4.2 or later.

Users simply pick a disk, click a button and in seconds they'll know exactly where the space-wasting duplicated files are hiding. DupLocator builds a catalog on all or selected volumes with viewing options that include all files, duplicates and B*tree listings. Detailed information is instantly available for each file/folder or disk. Floating palettes and 3D buttons also provide commands like Move, Copy, Delete, Rename, Info and Launch, which can be applied to batches of files/folders from different volumes, as well as individual files. The network compatible program also includes the ability to compress and open archives; color files and folders individually (or en-masse by type or creator); save and print reports of disk statistics, duplicates or complete catalog listings; mount SCSI devices; serialize searched floppies/removables; Balloon Help; and more. DupLocator is System 7 savvy.

DynoPage 2.0
Printer driver that prints any Macintosh file double-sided on any page size
Macintosh Plus or larger.

DynoPage is a print utility that lets users print directly to double-sided pages using regular-size paper or custom-size pages for personal organizers. PrintChooser is a Control Panel Device that allows users to quickly choose any printer driver or network printer from a menu or from a submenu appended to the Page Setup or Print menu choices. DynoPage can be easily turned on and off via PrintChooser, with a toggle-key, or from the Control Panel. More than 100 layouts are provided, making it a snap to create professional-quality booklets, thumbnails, post cards, business cards, storyboards, Tabloid signatures and more. DynoPage is accessed from the Page Setup and Print commands within any application or desk accessory. Users can print word processing documents, spreadsheets, pie charts, to-do lists, calendar pages, reports, etc., right to their personal organizer. The System 7 savvy DynoPage adds drag-and-drop printing from the Finder and will receive Apple Events commands from applications. Personal organizer paper is sold separately.

ExpressStripe
Disk striping software
Macintosh II or larger.

ExpressStripe (RAID Level 0) is an easy-to-use software package that increases disk performance by accessing data across several drives simultaneously. ExpressStripe is implemented through the ATTO SiliconExpress family of SCSI-2 accelerators for the Macintosh. Using the advanced BusMaster capabilities of the SiliconExpress, features such as disconnect/reconnect, scatter/gather and asynchronous I/O provide the highest performance levels available. ExpressStripe supports up to four disks per array and can be configured together with up to four SiliconExpress cards. While ExpressStripe supports four drives with a single card, overall data transfer rates are increased exponentially as additional SiliconExpress cards are added. ExpressStripe features selectable block sizes for improved performance. This configurable option allows for maximum I/O by matching the block sizes with typical requests based on a user's application.

FetchIt 3.1
Complete file management system within standard Open and Save dialog boxes
Macintosh 512K or larger; System 6.0.2 or later.

FetchIt is an INIT that adds a powerful set of commands from within the standard Open and Save dialog boxes. Users can find files with ease by using the Find File or the Look'fer command. FetchIt is targeted at those users who need to find files that contain specified text strings but do not want to go through the time to open and search each file. FetchIt's advanced feature will even allow users to search for files containing either or both of two text strings and see its context. In addition, FetchIt can find files by filename, create a new folder and duplicate, rename or delete files. It also displays the Get Info box with the Finder comment.

FileRunner For The Macintosh
File transfer and synchronization
Macintosh Plus or larger; 1 MB of RAM (2 MB with System 7); System 6.0.7 or later.

FileRunner is an ideal way to synchronize home, office, PowerBook and networked Macintoshes, simplifying and automating a tedious task. With Tru•Sync synchronizes all the updates, transfers, deletes and new files/folders users care about as though an "invisible network" exists between every Mac that is used. It automatically identifies and transfers updated and new files/folders. Overwrite SafeGuard protects data by never allowing older files/folders to destroy current version and warns users if the same file is changed on more than one Mac since the last time the program was run. An added safety feature is automatic scanning of viruses during transfer. FileRunner transfers files using a simple floppy disk or any type of disk users can see on the Macintosh desktop. The program performs either one way or bi-directional file

transfer. It also creates a customized log of all transfers, providing a comprehensive audit trail. For travelers the application compensates for time zone changes.

Findswell 2.4
Document locater, opener and path saver; remembers the location of frequently used documents
Macintosh 512KE or larger; System 3.2 or later.
Findswell is a document locater, opener and path saver that offers improvements over file locators. Documents and folders can be opened directly within an application, and Findswell remembers the path to documents and folders. When placed in the System Folder, a "Findswell" button is added to the Open and Save dialog of every Macintosh program. A user types all or part of a document name and presses the "Find" button. Documents and folders whose names contain the typed characters are shown. Frequently opened folders and documents are accessible without having to perform a find operation. Additional features include: remembers names of last several files opened; searches comments field; and a "New Folder" button. Findswell is System 7 compatible.

■ **FixIcons**
Bug fixer
Any Macintosh; separated hard disk drive; System 7.0 or later.
FixIcons is a system extension that cures a "bug" afflicting many System 7 Macintosh computers using partitioned hard drives or multiple hard drives. Under System 7, many users find that their icons have been changed to "generic" icons. Users are tired of having to rebuild their desktop file everytime they reboot. FixIcons will change icons back to individually different selves. FixIcons runs only at startup time and then vanishes. There are no settings, no adjustments.
$25 retail; volume discounts available

FolderJump 2.0
Adds features to the standard Open and Save dialog boxes
Macintosh Plus or larger; System 6.0.2 or later.
FolderJump is a startup document (INIT) that adds features to the standard Open and Save dialog boxes. It adds a new pop-up menu that contains a list of commonly used folders. Selecting a folder name from the menu will cause that folder to be made current. FolderJump provides a simple interface for adding and deleting folders to the menu. FolderJump's most interesting feature is its mouse-less jumping between folders. By invoking this feature from the keyboard, it will display a list of the same folders appearing in the pop-up menu, but allows users to select the folder by typing the first or first few characters of the folder name. Hitting the return key will then make that folder current. FolderJump makes moving between folders effortless.

Font/DA Juggler Plus
Lets users access thousands of fonts, desk accessories, Fkeys and sounds simultaneously
Macintosh 512KE or larger.
Font/DA Juggler Plus is a utility that lets a Macintosh user access thousands of fonts, desk accessories, Fkeys and sounds simultaneously. Up to 12 files containing these items can be opened with the utility and the contents made available system wide, just as if they had been installed on the System file. One of the advanced features of the Font/DA Juggler Plus is the ability to compress fonts. Font/DA Juggler Plus maintains four lists to manipulate fonts, DAs, Fkeys and sounds. Each list appears in a pop-up window that can be moved and scrolled. Also included with Font/DA Juggler Plus is FontShow, an advanced Fkey alternative to the font list. Several additional utilities are packaged with Font/DA Juggler Plus. Fkey/Sound Mover can copy, rename, renumber and remove Fkeys and sounds. Font Resolver will automatically resolve font numbering conflicts, and Font/DA Utility allows users to rename and renumber fonts and DAs manually. More than 50 tested public domain fonts, DAs, Fkeys and sounds are included.

GraVu!
Picture display enhancer
Macintosh LC or larger; System 7.0 or later.
GraVu! is a System extension that allows most Macintosh users to see higher quality picture images on their Macintosh screens. GraVu! modifies the MacOS to provide automatic gray-scale simulation on monochrome screens by error-diffusion dithering and extends this function to provide enhanced imaging on color screens of less than 32 bits/pixel. GraVu! allows users to 16 grays displays to see good renditions of 256-grays images from scanners and photo libraries. Users of 256 color displays can see remarkable simulations of "thousands" (16-bit) and "millions" (24/32-bit) of color images. Even users of 32-bit displays can benefit: GraVu!'s simulation of 32-bit images in 256 color mode is faster than updating the full screen in "millions" mode in typical documents where the 32-bit picture is comparatively small in relation to the entire document. In programs that support zooming, GraVu! will re-simulate images at each magnification selected, yielding optimum results at each magnification. GraVu! can be turned on and off with a user-configurable pop-up menu.

■ **GuRU**
Guide to memory upgrades
Any Macintosh, including PowerBooks.
GuRU is a guide to RAM upgrades, and is a freeware application that provides all possible memory upgrades of both system memory and video memory for all Macintosh computers, including PowerBooks and Power Macintosh. An excellent tool for users who are in charge of technical support or memory upgrades, it allows quick and easy identification of all memory options. By combining existing SIMMs with new SIMMs, the best use of the memory upgrade budget is afforded. By selecting a CPU, users can then view all possible SIMM memory combinations, as well as video memory options. Included in GuRU is a complete system readout of the CPU type and clock speed, number of slots, system version and other system-wide information. It is also available online from most major services.

Hand-Off II
File launcher
Macintosh Plus or larger; System 6.0.2.
Hand-Off II is a complete kit of Finder enhancements designed to facilitate the launching of applications and documents through the use of five main tools. The Supermenu feature, in conjunction with full support of System 7 Aliases, simplifies file access to System documents. Pop-up menus facilitate application launch by giving one mousestroke access to all launched and unlaunched applications under the menu bar. "Briefcases" designate groups of applications and/or documents for single-click simultaneous launching from the pop-up menu. Sound level and color depth may be assigned to each application and then automatically adjusted whenever that application is launched or selected. The "Application Not Found" dialog box is eliminated. Instead, a full menu of applications appears when a document is launched without the creator application present. Hand-Off II is compatible with System 6 and 7.

Help!
Problem-solving utility
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0 or later.
Help! is a configuration problem-solving utility for the Macintosh. It analyzes a user's system (both hardware and software), detects potential or actual problems and offers suggestions to fix any detected problems. It generates desktop publishing-quality

reports that include charts and tables. Reports can be customized to display only the desired topics. Help! is designed for all levels of Macintosh users and it helps reduce the need for support by providing a constant source of technical assistance at every user's workstation. Help! checks for problems by using an expert system to compare a user's configuration with a built-in knowledgebase of information. The knowledgebase contains rules for detecting problems, as well as recommended actions for solving every problem. Knowledgebase update subscriptions are available to keep up with the latest software and hardware products, system software and recently discovered conflicts. Help! detects startup document conflicts, incompatibilities between system software and hardware, incompatibilities between applications and system software (including System 7 support), incompatibilities between hardware and applications, improperly installed files, duplicate copies of files, multiple system folders, insufficient memory and damaged files.
$149 retail

Help! Personal
Problem-solving utility
Macintosh Plus or larger; 2 MB of free RAM; hard disk drive; System 6.0.4 or later.

Help! Personal analyzes a user's system (both hardware and software), detects potential or actual problems and offers solutions to fix them. Help! Personal is designed for all levels of Macintosh users and it assists in reducing the need for support by providing a constant source of technical assistance at every user's workstation. Help! Personal has a distinct advantage over other user support products because it detects and helps solve users' problems rather than just reporting on a system's configuration. Help! Personal checks for problems by using an expert system to compare a user's configuration against a built-in knowledgebase of information. The knowledgebase includes rules for detecting problems, as well as recommended actions for solving every problem. Help! Personal detects conflicts, incompatibilities, duplicate files, insufficient memory, improperly installed files and damaged files.

Icon editor
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 7.0 or later.

Icon 7 enables users to create custom icons for applications, files, folders and disks for instant recognition, and add some fun to their Mac. The Icon 7 editor includes a complete palette of tools for editing in black and white, 16 colors and 256 colors. In addition to the 17 functions in the tools palette, icons can be rotated clockwise or counter-clockwise, and flipped horizontally or vertically. Icon 7 lets users store icons in libraries, and even comes with sample libraries to get started.

■ **Icon Gallery**
Icon collection
Macintosh Plus or larger; 1 MB of RAM; System 7.0 or later; hard disk drive.

Icon Gallery is a collection of 850 professionally-painted color icons: people, appliances, logos, plants, designs and more. They are enfoldered by category, almost universally usable and unbelievably tempting. Within 30 seconds users can make their landscape of files and folders more personal, more colorful and funnier.

Icon Mania! 1.01
Icon customization
Color-capable Macintosh; System 7.0 or later.

Icon Mania! is the easiest way to customize icons. It makes it fun and easy to: replace boring icons with colorful, extraordinary alternatives; automatically create folder icons (no drawing required); automatically create thumbnail preview icons of all graphics files; touch up icons with a powerful editor; and manage icon libraries effortlessly (a huge icon library is included). Users can see the contents of a graphic file without opening it. MacPaint, Startup Screen, QuickTime, EPS, GIFF, Photoshop, PICS, PICT and TIFF filenames usually don't always accurately describe the images they contain. The solution: using a miniature of the image itself as the file's icon. Users just drag and drop graphic files onto the Icon Mania! application. Thumbnail icons are then automatically created. Users can even select a particular portion of the picture to use as the thumbnail icon.

Icon-It! 3.0
Utility allowing users to place menu commands, DAs, fonts and macros into a one-click, movable icon bar
Macintosh Plus or larger.

Icon-It! allows users to create their own personalized (even color) icons to represent frequently-used menu functions, desk accessories, Fkeys and macros, and display the icons on an "icon bar" appearing anywhere on the screen, vertically or horizontally. Users can install predesigned templates, sketch their own icons from the Icon-It! editor or import their favorite bit-mapped pictures from any paint program. Also, Excel or Tempo macros and Fkeys can be represented by familiar icons, so a user can simply click on the corresponding icon instead of having to remember the required keyboard combination. An icon library is included. Icon-It! is System 7 compatible.

INIT Manager
Takes control of startup documents
Macintosh Plus or larger; System 6.0 or later.

INIT Manager helps solve the conflicts created by the diverse mixture of public domain, shareware and commercial software by taking control of startup documents before they are loaded into a user's System file. It delivers the capability to generate detailed reports on INITs and their interaction with the Mac Operating System. With INIT Manager, users can create and save sets of INITs for use in specialized software group environments. With INIT Manager's system analysis capabilities, sophisticated reports can be generated on practically every aspect of the Macintosh Operating System. Using INIT Manager's Damage Control feature, INITs that cause System crashes are flagged, disabled and thus prevented from running without a user's knowledge and approval.

INITPicker 3
INIT manager
Macintosh Plus or larger; 1 MB of RAM; System 7.0 or later.

INITPicker helps users manage the tangled web of INITs that are supposed to make a system more productive, but frequently only serve to be a hindrance.

InLarge 2.0
Image-enlargement software for people with visual disabilities
Macintosh Plus or larger; System 6.0.5 or later.

InLarge is a software-only large print display utility that magnifies everything on the screen — graphics, menu bars, spreadsheet cells, dialog boxes, text, etc. — by 2 to 16 times. It works with virtually all Macintosh software, and follows typing and mouse movements without conflicting with the program being used. The magnified display can cover the whole screen or any user-defined portion; unmagnified areas can be blanked out. Additional features include: automatic scanning (horizontal and vertical); reverse video with "smart" color inversion; optional crosshairs for tracking cursor location; image "stretching"; and choice of screen motion options. The program is designed to be maximally configurable to meet users' specific needs.

Innovative Utilities
Four utilities in one package
Macintosh Plus or larger; System 6.0.5 or later (Memory Maxer requires System 7.0 or later).

Innovative Utilities provides four utilities in one package. Memory Maxer allows users to dedicate all memory to one memory-hungry application under System 7. Color Coordinator automatically adjusts color settings as users switch back and forth between programs. Hot DA opens any Apple menu item with a single keystroke and pastes graphics or text into a user's favorite desk accessory. Whiz-Bang Window Accelerator opens and closes windows in a flash. It gives the Finder a speed boost.

InTouch
Provides screen access (text and graphics) to the blind
Macintosh 512KE or larger; System 4.1 or later; Optacon II.

InTouch, developed by Berkeley System Design, is a Macintosh driver for TeleSensory's Optacon II, a tactile-imaging device for the blind. The Optacon hardware consists of a pad of vibrating pins and a hand-held camera, with which a user scans the material. The pins are raised and lowered to simulate the outline of each character, one letter at a time. InTouch applies the same concept to the Macintosh interface. Instead of a camera, the mouse is used to scan the text or graphics

Jukebox MO Manager
All the software needed to set up and run an optical autochanger on a Macintosh computer
Macintosh Plus or larger; System 6.0.3 or later.
Jukebox MO Manager allows users to create and maintain an optical library of up to 20 GB using the Hewlett-Packard Series 6300 Autochanger model 20GB/A, ISO standard rewritable cartridges and a Macintosh computer. Features include: mount the optical storage system on the Macintosh "desktop" screen environment; display and access all cartridges in the autochanger in a convenient, easy-to-use desk accessory display; format, partition, name, mount and eject new cartridges using the Installer application; automatically inventory the cartridges in the autochanger and display the status and name of each cartridge; test the data integrity of each cartridge using diagnostic features in the Installer application; "cursor sensitive" Help automatically guides users through each step; and supports both 512 and 1,024 byte/sector ISO standard cartridges.

Kaboom! 2.0
Sound utility; 150 wild and wacky sounds
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.4 or later.
With Kaboom!, users can add more than 150 wild and wacky sounds to their Macintoshes, from roosters crowing to tires screeching. Kaboom! also includes famous sounds and dialog from politicians and celebrities, like Richard Nixon and Ronald Reagan. With Kaboom!'s control panel, the Macintosh can automatically play the sound of a user's choice every time they start up the computer, insert a disk, open or close a window, throw a document in the trash and more. It includes the Kaboom! Factory Sound Editor.

Kiwi Power Menus
Apple menu utility
Macintosh Classic or larger; System 7.0 or later.
Kiwi Power Menus is an almost essential utility for any System 7 user. By adding submenus to any folder placed in the Apple menu, it enhances both the convenience and the usefulness of this menu. Users simply drop Kiwi Power Menus in the System folder and restart the Macintosh. From then on, users will be able to access any document on their hard drive or remote hard drive. With elegant simplicity, Kiwi Power Menus provides at the same time instant access to most often used files and a simple, familiar way to organize the Apple menu for maximum productivity.

Kiwi Power Windows 1.5
Cleans up a messy desktop
Macintosh Plus or larger; System 7.0 or later.
Kiwi Power Windows is a definitive window and document management utility. Created specifically for System 7, it provides users with elegant screen organization tools and a remarkably flexible system for accessing multiple documents. With "Work Sets" (groups of windows) and preset or customized "Window Layouts" (window arrangements), Kiwi Power Windows eliminates time-consuming retrieval of buried documents and hidden windows and maximizes efficient use of desktop space. It includes Kiwi Power Menus.

KopyKat 1.0.4
Allows users to access multiple clipboards
Macintosh 512K or larger; System 6.0.2 or later running MultiFinder, or System 7.
KopyKat is a powerful start-up document/control panel device that provides users with the ability to access multiple clipboards in most every application. KopyKat is not limited to one clipboard but expands the Macintosh's abilities to a "user-defined" number of clipboards. These "Kopys" can then be pasted into the same application in which they were "kopied" from or into another application. KopyKat does this by extending the already easy-to-use Macintosh interface by adding a sub-menu to the Paste menu. After one or more "Kopys" have been performed, a paste can be performed by selecting one of the menu items in the Paste sub-menu. KopyKat shows a preview of the "Kopy" before the paste is performed. KopyKat also provides an easy-to-use pop-up menu that allows "Kopys" and Pastes at a click of the mouse.

Label Designer
PostScript desktop publishing program
Macintosh Plus or larger.
Label Designer is a PostScript desktop publishing package that handles text, graphics and sequentially-ordered numbers or bar codes. Text, graphics and bar-code information can also be imported from most popular databases. Label sizes and layouts are user definable for laser printing on any type of label stock. Label Designer also features built-in step and repeating, and the capability to factor disproportioning for pre-press applications. In addition to full text and graphics editing capabilities, Label Designer uses ComputaLabel's graphical technology to create accurate bar codes within specifications defined by standards bodies, such as AIM and the UCC. A UPC code, for example, can be adjusted in between 80 and 200 percent of the nominal size in .1 percent increments; code height is separately adjustable to allow for bar-code truncation. To ensure accuracy of the final printed code, Label Designer allows adjustments as small as .00004 inches to the bar width. Code 39, UPC and PostNet bar coding is included with the base package; optional modules include Code 128, Interleaved 2-of-5, EAN and ISBN bar codes.

■ **Label Press**
Prints labels of any size with bar codes, text and graphics
Macintosh Plus or larger; System 6.0.7 or larger; printer.
Label Press is an advanced design tool for all-purpose label making and a true solution for Macintosh users with specialized, heavy-duty thermal bar code printers, such as those from Fargo/Datamax, Intermac and Zebra. Label Press contains Synex's Bar Code Pro graphic technology to create in one step bar-coded labels of any size on any printer, including ImageWriters. Eighteen bar-code symbologies are supported (no font required): UPC versions A&E, Postnet/FIM, Code 39, Code128, Codabar, ITF/ITF-14/Code 25, EAN 8 & 13/ISBN/ISSN/JAN 8 & 13, MSI/PLESSEY and PHARMACODE. External EPS or PICT graphics may also be used. Batch generation of labels from external database text files, as well as serialization of text and bar-code fields, is supported. Line and box drawing and rotation tools are also incorporated. It is fully System 7, 7.1 and Power Macintosh compatible. The specialized thermal version is dual purpose, working with desktop printers also.

LaserPlot
Converts HPGL and DXF file formats to EPS and PICT
Macintosh Plus or larger; System 6.0.7 or later.
LaserPlot allows users to convert drawings in HPGL and DXF format to EPS or PICT for import into Macintosh applications, where they can be cropped, rotated, skewed, colored, etc. Color and line thickness are retained, or users can assign line thicknesses and colors for each of eight pens used in the original file. Users can use batch mode to convert entire libraries at once, and run in the background while doing other things. Users can also precisely scale the drawing, use multiple zoom levels, etc. LaserPlot can also save in Adobe Illustrator or Aldus FreeHand formats for opening directly in those applications.

Last Resort 1.1
Utility for recovering lost text
Macintosh Plus or larger; System 6.0.2 or later.
Last Resort, a typing recovery program, allows users to recover text that was typed and deleted, and text that was typed and never saved. It records every keystroke without slowing down a user's typing. Keystrokes are saved to Last Resort keystroke files on the hard disk. When users need to recover text, they can use any word processor to open and edit the text in a Last Resort keystroke file. For easy identification, the keystroke files are named with the time and date of their creation. To install Last Resort, users copy the program into the System Folder. After restarting the Macintosh, every keystroke is saved automatically to a file in the Last Resort folder. The program is controlled from the Control Panel. In the Control Panel, users may: set the number of keystrokes that are typed before the keystrokes are saved to the keystroke file; set the number of seconds that the Macintosh has remained inactive before keystrokes that haven't been saved to the Last Resort keystroke file are saved; disable Last Resort; and select unwanted keystroke files for deletion. Last Resort can also be used to rebuild a document when text can't be extracted from a corrupted document. Last Resort is System 7 compatible.
